Details of 300 Models and 800 Functions in Modeling Toolkit and ROV Valuator

(Los detalles de 300 Modelos y 800 Funciones en Modeling Toolkit/ROV Valuator)

Version 5.0 Ingles, Español, Japonés, Chino, Portugués, Francés, Italiano, Alemán, Ruso trabaja con Windows XP Vista, y en otros ambientes escrito en la C++, con más de 125 ejemplos de modelos y conjuntos de datos

capaz de extraer millones de datos de la copiación de la base de datos del ODBC, CSV, archivos de excel, archivos de texto o bases de datos OFDM en ORACLE, para correr análisis avanzados incluyendo simulación de Riesgo, Pronóstico estocástico, Optimización de portafolios, análisis avanzados, manipulación de datos (limpieza de datos, clasificación, SQL, comandos SQL, búsqueda y otros)

corre el Modelo de Basilea II (riesgo de Mercado y de Crédito que es compatible con el Modeling Toolkit), análisis de simulación y análisis de Opciones (compatibles con muchas funcionalidades del Risk Simulator y de Real Options SLS)

corre fuera e independiente de Excel, para que los analistas corran con una rapidez extremadamente alta y puede manejar un millón de puntos de datos, puede ser Programada para correr a tiempos específicos, y que los reportes puedan ser creados en Excel y Word, con la Habilidad de generar archivos XML usados en ROV Dashboard

Version 1.1 Ingles, Español, Japonés, Chino, Portugués, Francés, Italiano, Alemán, Ruso trabaja con Windows XP y Vista, Excel 2007 escrito en la plataforma C# Microsoft .NET 3.5

Extrae cualquier modelo de excel en archivos autoejecutables EXE que son encriptados, por lo tanto la propiedad intelectual de los modelos está protegida así como el modelo de Excel original, Usted puede LICENCIAR el EXE (la lógica del negocio está protegido y el modelo no puede ser alterado, por lo tanto Ud. puede dar un trial o licencias permanentes), convierte los modelos complejos en códigos binarios y cuando el último usuario abre el archivo, lo deja en un ambiente de excel excepto que el negocio lógico está protegido... otra alternativa, el EXE puede correrse en una consola de comando para computación rápida o OEM en la propiedad de su propia aplicación de software (en vez de escribir largos y complejos códigos, use excel como una plataforma de desarrollo para crear el EXE requerido, componente lógico para la modelación)

Version 1.1 Ingles, Español, Japonés, China, Portugues, Frances, Italiano, Aleman, Ruso trabaja con Windows XP y Vista, Excel XP 2003 y 2007 y sistema MAC Parallels o Windows Emulator

Hace cualquier modelo de creación en excel al programador, con la habilidad de proteger las licencias y las ventas de sus propios modelos extracts any Excel model into EXE self-executable files that are encrypted so that the intellectual property of the model is protected and as the Excel model creator, you can now LICENSE the EXE (the business logic is protected and the model cannot be tampered with and you can create timed trial or permanent licenses), and converts the complex model into binary code and when the end-user opens the file, it will launch Excel and look and feel exactly like Excel except the business logic are all protected... Alternatively, the EXE can be run in console command mode for quick computations or OEM into your own proprietary software applications (instead of writing long and complex codes, use Excel as the development platform to create the required EXE logic in component based modeling)!

Version 1.0 Ingles, Español, Japonés, Chino, Portugués, Francés, Italiano, Alemán, Ruso escrito en Java y que puede correrse en el Internet Explorer, Netscape o Firefox

Soporta más de 30 tipos de gráficos y tablas, tiene capacidad para leer el ROV Modeler con archivos de salida en XML, usando múltiples claves (administrador versus usuarios regulares). Asignación de los derechos para ver determinados reportes y mucho más

Version 1.2 Ingles trabaja con Windows XP y Vista, Excel Xp 2003 y 2007 y sistema MAC Parallels o Windows Emulator, escrita en Visual Basic 6 y VBA Excel

Corre como un add-in dentro de excel y calcula los siguientes tipos de estadísticas: Modelo de Elección/ayuda al usuario a elegir correctamente la herramienta estadística y de análisis a correr). Análisis de varianza (ANOVA de factor único, tratamiento múltiple de bloque aleatorio, ANOVA de 2 vías), Estadísticas básicas (estadísticas descriptivas, matriz de correlación, matriz de covarianza y varianza), pruebas de hipótesis (una y dos variables incluyendo pruebas t y Z para las medias y proporciones con varianzas dependientes e independientes), Simulación Monte Carlo (corre 7 distribuciones de simulación simple... uso del Risk Simulator para tipos más avanzados de simulación), no paramétricos (Pruebas de bondad Chi cuadrado para el ajuste y pruebas de independencia y varianzas, pruebas de Friedmans, pruebas Kruskal-Wallis, pruebas Lilliefors, pruebas Wilcoxon Signed-Rank para una y más variables). Probabilidades (crea tablas de probabilidades exactas para 18 tipos de distribuciones), Pronóstico Estocástico (jump difusión, reversión a la media y caminatas aleatorias), análisis de series de tiempo (ARIMA, Auto ARIMA automático y 8 modelos de descomposición de series de tiempo), Análisis de Regresión (regresión múltiple y componentes principales de análisis)

Version 1.0 BETA Ingles, escrito en Java y PHP que pueden correrse en Explorador de Internet, Netscape o Firefox

Corre sobre 800 funciones y modelos, se basa en un sistema por suscripción para un límite de tiempo y número de usuarios, compatible con funciones y modelos del Modeling Toolkit

ROV Modeler, Optimizer, Valuator
Simulation, Forecasting, Optimization and Advanced Analytics on a Desktop and Server Environment with Large Datasets

Risk Simulator
Monte Carlo Simulation, Pronóstico Estocástico, Optimización de Portafolio, Herramientas Analíticas

ROV Extractor and Evaluator
ROV Extractor y Evaluador que extrae modelos de excel en códigos de matemática pura para protección IP y simulaciones y cálculos Hyperspeed

Real Options SLS
Real Options SLS soluciona multiples tipos de Opciones Reales, Opciones Exóticas, Opciones Financieras, y Stock Options para empleados

ROV Compiler
Extrae y Convierte Modelos de Excel en Software Licenciado Protegido y Ejecutable

ROV Dashboard
Gestión y Manejo de Graficas y Tablas online

ROV BizStats
Basico estadístico excel adición de herramientas

ROV Web Calculators
Calculador ROV WEB sobre 800 funciones y modelos online así como calculadoras WEB

Version 5.0 Ingles, Español, Japonés, Chino, Portugués, trabajando con windows XP y Vista, Excel XP, 2003 y 2007, y MAC sistema que corre en paralelo con o Emulador Windows, escritos en C# plataforma de Microsoft .NET 2.0

24 Distribuciones, Reportes detallado, Simulaciones correlacionadas con Cúpulas, distribuciones truncadas, simulación histórica con distribuciones personalizadas Delphi, simulación Bootstrap no-paramétrica, gráficas interactivas, gráficas superpuestas, simulación de ecuaciones dentro de Excel y mucho más

ARIMA, Arima Automático, Econometria Automática, Econometria Basica, Cubic Spline Cúbicos, GARCH, Curvas J, Estimadores de Máxima Verosimilitud, Regresión Multivariada, Extrapolación No lineal, Curvas S, Procesos estocásticos, Descomposición de Series de tiempo, Lineas de Tendencia

Optimización Lineal, No lineal, Estática, dinámica y estocástica, optimización con variables de decisión binarias, enteras y continuas, análisis de frontera eficiente y resultados analíticos detallados. (Matrices Hessiana y gradientes)

Diagnóstico de datos, extracción de datos, análisis detallado estadístico, reportes detallados, ajuste de distribución, gráficas superpuestas, análisis de escenarios, análisis de segmentación, análisis de sensibilidad, perfil de simulación, gráficas Spider (araña), análisis de tornado y pruebas avanzadas incluyendo heterocedasticidad, micronumerosidad, outliers, no linealidad, autocorrelación, normalidad, esfericidad, no estacionalidad, multicolinealidad y significancia estadística en las correlaciones

Version 5.0 Ingles, Español, Japonés, Chino, Portugués, trabajando en Windows XP y Vista, Excel XP, 2003 y 2007 y Sistema MAC que corre con paralelos o con emulador de windows, escrito en la plataforma C# Microsoft .NET 2.0

Corre redes binomiales, trinomiales, cuadrangulares, pentagonales, modelos de forma cerradas, métodos analíticos (reducción de varianza), Precios de estado, y muchos modelos que son creados por usted mismo como modelos de opciones con ecuaciones visibles y con herramientas que son compatibles con Risk Simulator y que pueden ser creados tanto en formato excel como en aplicaciones de software autónomo, capaz de resolver innumerables tipos de opciones con un completo modo de personalizarlo

Más de 300 modelos en forma cerrada y funciones que cubren todo tipo de opciones exóticas y modelos afines con las opciones (opciones de bonos, volatilidad, cambios de volatilidad, hedge ratios y mucho más)

Opciones Reales como Opciones compuestas secuenciales, Opciones phased stage-gate y opciones de activos múltiples, con combinaciones de opciones de abandono, barrera, expansión, contracción, intercambio, espera y aplazamiento, y cualquier opción real definida por el usuario, con la capacidad para de mezclar y ajustar opciones (mutuamente excluyentes y opciones anidadas)

Las Opciones financieras incluyen todo tipo de mezcla de activos múltiples y opciones benchmark, de garantía, convertibles, vehículos financieros estructurados, para Opciones Americanas, Europeas, Bermuda y opciones Asiáticas, así como para cualquier opción elaborada por Usted

Stock Options para empleados y las que usted diseña a gusto personal

Versión 1.2, en Inglés, con más de 300 ejemplos y 800 funciones en Excel escritas en Visual Basic 6 y VBA excel, donde los modelos y funciones de Excel son todas accesibles en Excel para ser usadas dentro de sus propios diseños ya existentes

Análisis de crédito (análisis primas de crédito, crédito externo y análisis de crédito de Mercado y modelos de clasificación de crédito interno), análisis de deuda (modelos de paridad de activo-patrimonio, Modelos Cox, Modelos estocásticos Merton, modelos estructurales de Vasicek para determinar el valor del riesgo de la deuda, rendimientos y comportamientos de reversión a la media de las tasas de interés, así como la aplicación del análisis de Opciones Reales para determinar el Valor en Riesgo de deuda y los requerimientos de rentabilidad), Pronósticos (Modelo económico de Box-Jenkins ARIMA, Series de Tiempo, extrapolación no lineal y regresiones multivariadas. Estos modelos usan el software Risk Simulator que es parte de la edición de Premium), Riesgo Operacional (modelos Queueing y análisis plantillas de riesgo operacional), Optimización (Modelos de Optimización Estocástica discreta, continua y dinámica que son usados para determinar la más eficiente y efectiva cuota de asignación del riesgo para portafolios de crédito. Determinación del Valor en Riesgo, asset allocation, oportunidades de inversión, y simulaciones de Merton para el riesgo de crédito externo al perfil de la compañía), Probabilidad de impago (la herramienta incluye Mercado interno y externo y modelos de crédito empíricos de impago. Aplicamos modelos de opciones para determinar riesgo de crédito de impago, Riesgo de impago estocástico, probabilidad empírica de impago y el distanciamiento del mismo), Risk Hedging (Modelos de Cobertura Delta, Modelos de hedging Delta Gamma, modelos de hedging de cambio, extranjero y otras herramientas que provee el toolkit), Análisis de sensibilidad (las Griegas de las Opciones, así como el cálculo de Duraciones y Convexidades para el mercado de Bonos, Valordación (de moneda extranjera, foreign-based equity, opciones sobre commodities y cálculo de forwards para determinar el Valor en Riesgo de la cobertura. Otros modelos como el de Derivados perpetuos y opciones exóticas están incluidas), Valor en Riesgo (la herramienta incluye modelos de valoración de riesgo determinados por Basilea II), Modelos de curvas de rendimiento (modelos de interpolación, extrapolación, revertimientos, Modelos BIM y Vasicek. Con el Risk Simulator se puede simular reversión a la media, jump diffusion, y caminatas aleatorias para la valoración de precios y tasas de interés). El ESO Valuation Toolkit valora Stock Options para empleados

Version 1.2 Ingles, trabaja con windows XO y Vista, Excel XP 2003 y 2007, y el sistema MAC Parallels o Windows Emulator, escrita en Visual Basic 6 y Excel VBA

Completa funcionalidad en Excel como un add-in de complemento, tiene funciones ESO y modelos de plantillas de ejemplos, para resolver Opciones Americanas, Europeas y Bermuda... La parte Analítica es compatible con el REAL OPTION SLS (uso del SLS para Opciones personalizadas y más avanzadas)

RISK SIMULATOR

RISK SIMULATOR 5.0

Simulación de Monte Carlo

25 distribuciones de probabilidad con una interfase fácil de usar, posee un módulo de simulación Super Rápida (miles de iteraciones en pocos segundos) con reporte de estadísticas, distribución de correlaciones con Cúpulas, truncamiento, simulaciones multidimensionales y funciones del Risk Simulator en Excel

Herramientas Analíticas

Bootstrapping, Segmentación de grupos, Reportes completos, Extracción e importación de datos, Diagnóstico de datos, Ajuste de Distribuciones , Distribución de Probabilidades (PDF, CDF , ICDF), Pruebas de Hipótesis, Gráficos Superpuestos, Análisis de Sensibilidad, Análisis de escenarios, Análisis Estadístico, Gráficos de Tornado y Araña.

Pronostico

ARIMA Box-Jenkins, ARIMA Automático , Econometría Básica, Econometría Automática, Spline Cúbicos, Distribuciones personalizadas, Modelos GARCH, Curvas J y S, Cadenas de Markov, Máxima Verosimilitud, Regresión Múltiple, Extrapolación No lineal, Procesos Estocásticos, Descomposición de Series de Tiempo, Tendencias

Optimizacion

Optimización Estática, Dinámica y Estocástica con Variables De Decisión continuas, discretas y enteras, Frontera Eficiente, Optimización Lineal y No Lineal

QUE ES EL ANALISIS DE RIESGO?

Cómo toma decisiones críticas en los negocios? Ud. considera los Riesgos de Sus proyectos y Decisiones o está más enfocado únicamente a la rentabilidad? Le toma tiempo entender qué es el Riesgo, y cómo cuantificarlo? Pues bien, nuestro Software RISK SIMULATOR le ayudará a identificar, cuantificar y valorar el Riesgo en sus proyectos y Decisiones.

RISK SIMULATOR es un poderoso software que funciona como un add-in de Excel para aplicar la Simulación, Pronóstico, Análisis Estadístico y Optimización de sus modelos existentes en hojas de cálculo en Excel. El software fué desarrollado específicamente para ser muy fácil de usar. Por ejemplo corriendo una simulación es tan simple como 1-2-3: coloque una entrada, coloque una salida y córralo. La realización del pronóstico puede ser tan simple como 2 o 3 clicks con el mouse y el software hace todo por Ud. automáticamente, con reportes en detalle, gráficos y resultados numéricos. Se ha desarrollado en Inglés, Español, Chino, y Japonés, próximamente en otros lenguajes.

Si tenemos la tecnología para enviar naves espaciales a través del sistema solar, porqué no podemos gastar un poco más de tiempo cuantificando el Riesgo? Tal tecnología ya existe y el RISK SIMULATOR encapsula estas metodologías avanzadas en una herramienta simple y amigable de usar. Tenemos libros, entrenamiento en tiempo real (Certificado en Gestión de Riesgo), seminarios, DVDs de entrenamiento, consultoría y muestras gratis de videos para empezar en el análisis y modelaje del Riesgo en nuestra página web.

RISK SIMULATOR está también integrado con nuestro otro software el cual incluye: Real Options Super Lattice Solver, Employee Stock Options Valuation Toolkit, Modeling Toolkit (800 Funciones y 300 Modelos), ROV Modeler, ROV Optimizer, ROV Valuator, ROV Basel II Modeler, ROV Compiler, ROV Extractor and Validator, and ROV Dashboard. Por favor visite nuestra página web para más detalles.

DETALLE DE LOS MODULOS

SIMULACION DE RIESGO CON MONTECARLO

25 Distribuciones de Probabilidad con una interfase muy fácil de usar, corriendo (miles de iteraciones en pocos segundos) con reporte de estadísticas, distribución de correlaciones con Cúpulas, truncamiento, simulaciones multidimensionales y funciones del Risk Simulator en Excel.

HERRAMIENTAS ANALITICAS

Bootstrapping, Segmentación de grupos, Reportes completos, Extracción e importación de datos, Diagnóstico de datos, Ajuste de Distribuciones , Distribución de Probabilidades (PDF, CDF , ICDF), Pruebas de Hipótesis, Gráficos Superpuertos, Análisis de Sensibilidad, Análisis de escenarios, Análisis Estadístico, Gráficos de Tornado y Araña.

PRONOSTICOS

ARIMA Box-Jenkins, ARIMA Automático, Econometría Básica, Econometría Automática, Spline Cúbicos, Distribuciones personalizadas, Modelos GARCH, Curvas J y S, Cadenas de Markov, Máxima Verosimilitud, Regresión Múltiple, Extrapolación No lineal, Procesos Estocásticos, Descomposición de Series de Tiempo, Tendencias y más! Estamos trabajando para ofrecer técnicas más avanzadas en futuras versiones.

OPTIMIZACION

Optimización Estática, Dinámica y Estocástica con Variables De Decisión continuas, discretas y enteras, Frontera Eficiente, Optimización Lineal y No Lineal con altos niveles de precisión.

MATERIAL DE SOPORTE

- 5 LIBROS en análisis de Riesgo, simulación, pronóstico, Optimización, Opciones Reales y valoración de Opciones escritos por el creador del software.
- DVD de entrenamiento en análisis de Riesgo (simulación, pronóstico, Optimización, Opciones Reales y estadísticas aplicadas a los negocios).
- Entrenamiento en vivo y certificación en cursos sobre Manejo General de Riesgo, Simulación de Riesgo, Pronóstico, Optimización, y análisis de Opciones Reales.
- Manual detallado, archivo de ayuda y una extensa biblioteca de archivos con ejemplos.
- Consultores de Proyecto con grados académicos avanzados y años de consultoría así como experiencia en la industria.

TRIAL Y VERSIONES ACADEMICAS

RISK SIMULATOR puede ser descargado inmediatamente desde nuestra página web con una licencia para 10 días. Nuestra filosofía es que Ud. lo pruebe antes de comprarlo. Una vez Ud. lo usa Ud. se enamorará con la simpleza de uso y lo poderoso de la herramienta convirtiéndose en una parte indispensable para Ud. Tenemos también licencias académicas para profesores de tiempo completo que enseñen análisis de riesgo o para otros cursos asociados usando el RISK SIMULATOR u otro de nuestros de Software. Contáctenos en admin@realoptionsvaluation.com para más detalles.

ENTRENAMIENTO Y CONSULTORIA

Las herramientas de Análisis avanzado como el software RISK SIMULATOR fueron construidas para ser fáciles de usar pero pueden generar problemas si son usadas de manera inapropiada. La comprensión teórica combinada con la experiencia pragmática es vital, por lo tanto el entrenamiento es crítico.

Nuestro curso de **Análisis de Riesgo** es un seminario de 2 días que está enfocado en el uso del software con tópicos que cubren la parte básica del riesgo y la incertidumbre, usando simulación de Montecarlo y todos los métodos detallados en pronóstico y optimización.

Tenemos también un curso sobre **Opciones Reales para Analistas** que deseen empezar a aplicar Opciones Reales en su trabajo pero que no tienen la experiencia con la parte analítica de las Opciones Reales ni su modelaje. Este es un curso de 2 días que trata sobre como establecer los modelos de Opciones Reales, solucionando problemas de Opciones reales usando simulación, redes binomiales y multinomiales usando el software Real Options SLS.

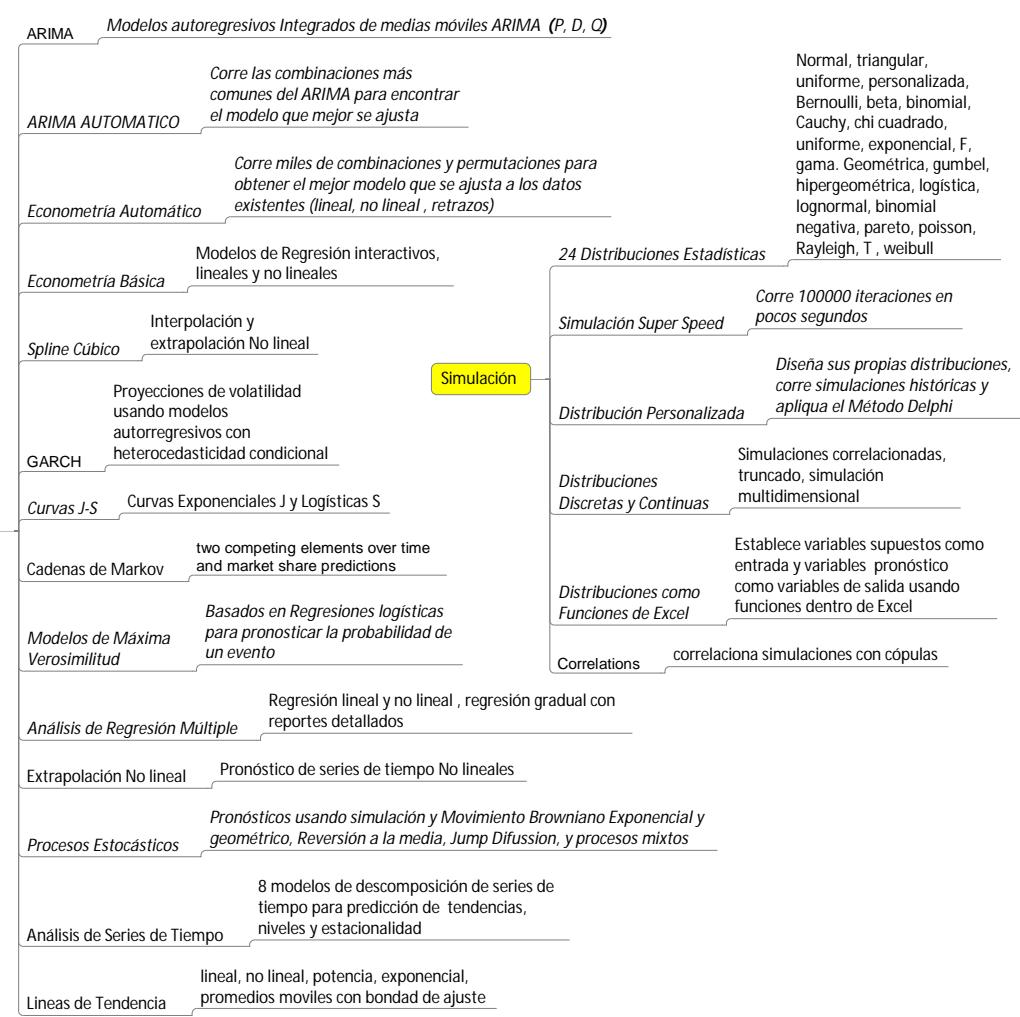

El **Certificado en Gestión de Riesgo (CRM)** es un seminario de 4 días que cubre el material en nuestro curso de Análisis de Riesgo y el curso de Opciones Reales para analistas orientados hacia la certificación que otorga el International Institute of Professional Education and Research .

Nuestro curso de **Análisis de Riesgo para Gerentes Senior** es un seminario de 1 día especialmente diseñado para ejecutivos senior donde por medio de análisis de casos se revisarán experiencias en Gestión de Riesgos en compañías como 3M, Airbus, Boeing, GE entre otras. En él se ofrece a los ejecutivos una visión general de análisis de Riesgo, Opciones reales, Optimización de Portafolio, pronóstico y conceptos de Riesgo sin detalles técnicos.

También están disponibles cursos de análisis de Riesgo y Valoración hechos a la medida de su empresa y sus necesidades. Están disponibles Servicios de consultoría incluyendo la formulación de problemas y análisis de Riesgo , Simulación, Pronóstico, Opciones Reales, Construcción de modelos y diseño de software hecho a la medida.

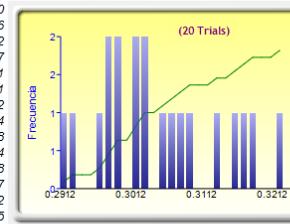

EXPERIENCIA

El creador de este software es el **Dr. Johnathan Mun**. Profesor de Análisis de Riesgo y **Opciones Reales para Analistas, Análisis de Riesgo para Gerentes** y para el **Certificado de Gestión de Riesgos**, entre otros cursos. Ha sido consultor para muchas empresas del Fortune 500 (3M, Airbus, Boeing, General Electric, Motorola entre otras) y del Gobierno de los Estados Unidos (Departamento de Defensa, Agencias Estatales y federales) en Análisis de Riesgo, Valoración y Opciones Reales. El Dr. Mun ha escrito diversos libros sobre el tema como: *Real Options Analysis: Tools and Techniques, 1st and 2nd Edition (Wiley Finance, 2005, 2002); Real Options Analysis Course: Business Cases (Wiley Finance, 2003); Applied Risk Analysis: Moving Beyond Uncertainty in Business (Wiley, 2003); Valuing Employee Stock Options Under 2004 FAS 123 (Wiley Finance, 2004); Modeling Risk: Applying Monte Carlo Simulation, Real Options Analysis, Forecasting and Optimization (Wiley, 2006); Advanced Analytical Models: 800 Functions and 300 Models from Basel II to Wall Street and Beyond (Wiley 2008); The Banker's Handbook on Credit Risk: Implementing Basel II (Elsevier Academic Press 2008)*. El Dr. Mun es el fundador y CEO de REAL OPTIONS VALUATION INC. Y es el responsable del desarrollo de productos de Software para análisis, consultoría y entrenamiento. Anteriormente fué Vicepresidente de Análisis en Decisioneering, Inc (ORACLE), fué Gerente de Consultoría de KPMG, también fué Jefe de Pronósticos Financieros para Viking, Inc (Compañía de FedEx). El Dr. Mun también es Profesor en the U.S. Naval Postgraduate School y the University of Applied Sciences and Swiss School of Management (Zurich y Frankfurt), así como professor adjunto en otras Universidades. Posee un Ph.D. in Finance and Economics, un MBA in business administration, y un M.S. in the area of management science, un BS in applied sciences. Posee el Certified in Financial Risk Management (FRM), Certified in Financial Consulting (CFC), and Certified in Risk Management (CRM).

Resumen Estadístico

Un Proceso Estocástico es una secuencia de eventos o caminos generados por aleatorios pueden ocurrir en el tiempo, pero son regidos por leyes estadísticas y los Estocásticos incluyen la Caminata Aleatoria o Proceso Browniano, Preguntas a pueden ser utilizadas para pronosticar una multitud de variables que aparente restringidas por las leyes de la probabilidad.

El proceso de Movimiento Browniano de Caminata Aleatoria puede utilizarse para básicos o comodines, y otros datos estocásticos de series se tiende volatilidad alrededor de la trayectoria o sendero originado por la derivada. El proceso las ilustraciones del Proceso de Caminata Aleatoria, permitiendo al sendero haciendo muy útil para pronosticar variables de series de tiempo que tienen una alta inercia (estas son más propensas a largo plazo determinadas por las autoridades y el Salto es muy útil para pronosticar datos de series de tiempo cuando las variables como la presión del petróleo o el precio de la electricidad, los precios de los bienes y el dinámico). Finalmente, estos tipos de procesos estocásticos pueden mezclarlos y los resultados a la derecha indican la media y la desviación estándar de todas las iteraciones mostradas. Todas las iteraciones, cada ruta de las iteraciones se mostrará abajo muestra un ejemplo de un conjunto de varias rutas de iteraciones.

Proceso Estocástico: Movimiento Browniano (ruta aleatoria) con F

Los valores óptimos se han encontrado. ¿Desea reemplazar las variables existentes de la decisión con los valores óptimos?

menos (algunas distribuciones requieren un momento, mientras que otras requieren dos momentos, y así sucesivamente). Los primeros momentos describen la ubicación de una distribución (por ejemplo, media, mediana y moda) y es interpretada como los sucesos.

...yendo todo el conjunto de datos y dividiéndolos entre el número de elementos o datos. La Media Geométrica se calcula extrayendo en positivos. La Media Geométrica es más adecuada para porcentajes o tasas que fluctúan significativamente. Por ejemplo, usted promedio dadas las tasas de interés compuesto con tasas variables. La Media Recortada calcula el promedio aritmético del datos, que los promedios tienden a tener una preferencia significativa cuando existen valores extremos, la Media Recortada

de una muestra. Mientras mayor sea el tamaño de la muestra, menor será el error ya que si se tiene una muestra infinitamente grande, la media estimada es igual a la media real.

La media se calcula dividiendo el total de los datos entre el número de datos.

La media es el valor más grande. Rango es la diferencia entre el valor Máximo y el valor Mínimo.

Indica el grado de asimetría de una distribución alrededor de su media. Un Sesgo Positivo indica una distribución con una cola

probabilidad comparada con una distribución normal, este es el cuarto momento de una distribución. Se tiene un valor de tres.

Si un valor es negativo, la cola es más larga y la cola es más corta. Una asimetría positiva indica una distribución relativamente positiva y

en relativamente acentuada y una asimetría negativa indica una distribución relativamente plana. La Curtosis medida aquí ha sido

alta alrededor de cero conlleva una interpretación más sencilla. Una Curtosis muy negativa indica una distribución muy aplastada

a alta de eventos extremos (por ejemplo, eventos catastróficos, ataques terroristas, caídas en la bolsa) que se predicen en una

probabilidad comparada con una distribución normal.

El cuarto momento es el cuarto momento de una distribución de una variable. La media es el cuarto momento de una distribución.

MODIFICACIONES EN EL SIMULADOR DE RIESGO 5.0

A continuación se enlista las mejoras y herramientas disponibles en la última versión del Simulador de Riesgo, así como las mejoras desde sus previas versiones:

Mejoras de la versión 5:

- **Simulación Súper Veloz:** Esta nueva capacidad permite ejecutar el simulador a la máxima velocidad desde el primer análisis del modelo de Excel y posteriormente codifica el modelo al código matemático puro, logrando ejecutar el simulador en su máxima velocidad. Algunos modelos que no puede ser codificadas serán simuladas a la velocidad normal (por ejemplo, modelos con funciones de VBA y macros, ligas a los datos externos o archivos, funciones erróneas o sin fundamento y modelos con errores).
- **Iconos revisados en Excel 2007:** Los usuarios de Excel 2007 encontrará los íconos de la herramienta completamente renovadas, siendo más intuitivas y amigable. Podrá encontrar 4 íconos de ajuste para mayor resolución de la pantalla (1280 x 760 y más resolución).
- **Mejora en los Gráficos de Pronóstico:** Los gráficos del pronóstico ahora cuenta con las siguientes mejoras:
 - **Estadística Truncada:** Si ejecuta algunos datos filtrando en la gráfica del pronóstico (Sección de Filtro de Datos en la gráfica de opciones), la gráfica de estadística mostrará la estadística actualizada basado en el ajuste de datos truncados. Si no se truncó los datos de pronóstico, las estadísticas de todos los datos ajustados se mostrarán normal.
 - **Controles de los gráficos (3D/Inclinar /Mover, Colores, Ajustar, PDF/CDF).** Esta es la nueva gráfica dentro de la gráfica de pronóstico por medio del cual podrá modificar los gráficos del pronóstico existente incluyendo la realización del ajuste distribucional en el ajuste de los datos de pronóstico, crear sobreposición de gráficos de PDF/CDF/ICDF, cambiar las opciones de los gráficos (tipos de los gráficos, rotación de 3D, colores, zoom, inclinación, número de los decimales, valores mínimos y máximos para graficar sobre los ejes, nombre del título, y otras más opciones, incluyendo la habilidad para guardar los ajustes revisados e imprimir los gráficos en varios formatos).
- **Auto Econometría:** Esta nueva herramienta de pronóstico es utilizado para ejecutar cientos, incluso miles de combinaciones de modelos y permutaciones aplicando una inteligente heurística para determinar el modelo que mejor ajusta a los datos por medio de exámenes lineal, no-lineal, retardadas, adelantadas interactuadas, jerarquizadas y otros modelos. Esta herramienta es la contraparte de auto econometría detallada en el software de Modelador de Riesgo de ROV, el cual es capaz de ejecutar cientos de miles de pocos millones de modelos de una gran cantidad de datos.
- **Econometría Básica:** La herramienta de pronóstico existente está mejorado con nuevas capacidades que incluye las habilidades de crear nuevos variables y funciones como el tiempo (variable de series de tiempo lineal), DIFF (primera diferenciación del ajuste de los datos de series de tiempo), RESIDUAL (datos desde términos erróneos de ecuaciones de pronóstico que especificó), TASAS (tasa de primer orden de los datos de series de tiempo), y PRONÓSTICO (datos desde los términos erróneos de ecuaciones de pronóstico que especificó).
- **Análisis de líneas de tendencia:** Esta nueva herramienta ejecuta la línea de tendencia más común que incluye la lineal, no-lineal, exponencial, de fuerza, promedio variable y modelos polinómicos, devolviendo las secuencias de los gráficos así como la prueba de bondad del ajuste para cada modelo.

- **Sobreponer Gráficos:** Esta nueva herramienta de gráficos es utilizado para comparar múltiples supuestos y/o variables de pronóstico trazándolos en los series de tiempo o en la forma sobrepuerta de secciones cruzadas. Esto permite ver rápidamente las similitudes y diferencias en los gráficos de lectura rápida de suposiciones y pronósticos.
- **Segmentación y agrupación:** Esta herramienta es apto para segmentar y agrupar conjuntos de datos grandes en diferentes grupos estadísticamente naturales por medio de la aplicación de algunos algoritmos y heurística inteligente.
- **Crear Tabla de Estadística de los Pronósticos:** Esta nueva herramienta puede crear reportes claves de las estadísticas del pronóstico (por ejemplo, la media, modo medio, desviación estándar, varianza, coeficiente de la variación, oblicuidad, Curtosis) así como los niveles de confianza y probabilidades del resultado de los variables del pronóstico que seleccionó. El resultado es la tabla enlistada de comparación de estadísticas seleccionadas entre los múltiples pronósticos.
- **Flexible adquisición de la Licencia:** Podrá encontrar nuevas mejoras en la adquisición de la Licencia:
 - El control de acceso a usuarios se activó para los usuarios de Vista y en caso de usuarios limitados que sin acceso administrativo podrá también disfrutar de las funciones completas del Simulador de Riesgo al instalar la licencia del programa sin necesidad de realizar alguna otra aplicación. Para instalar el nuevo archivo de licencia que recibió, simplemente inicie Excel, de clic al Simulador de Riesgo, Licencia, Instalar Licencia y examine el archivo de la licencia que le fue otorgado para activar el programa de forma permanente o por el periodo de prueba.
 - El simulador de Riesgo ahora tiene la opción de activar y desactivar ciertas funciones que permitirá personalizar el análisis de riesgo. Por ejemplo, si sólo está interesado en las herramientas del pronóstico del Simulador de Riesgo, será necesario obtener una licencia especial que sólo activará las herramientas del pronóstico, mientras que los demás módulos serán desactivados, que le permitirá ahorrar algún costo sobre el programa. Los cuatro módulos que tendrán la opción de activar y desactivar incluye la Simulación, Pronóstico, Optimización y Herramientas de Análisis. Incluso algunas herramientas específicas de cada módulo podrán ser activadas o desactivadas. Esta personalización esta disponible solamente para licencias de sitios de más de 10 computadoras.
- **Modelo de Pronóstico Avanzado:** Junto con las herramientas y técnicas del pronóstico de la versión 5.0, el Simulador de Riesgo ahora tiene las siguientes metodologías de pronóstico:
 - i. **ARIMA (Promedio Móvil Integral de Auto Regresión)**
 - ii. **Auto ARIMA**
 - iii. **Auto Econometría**
 - iv. **Econometría Básica**
 - v. **Spline Cúbico**
 - vi. **GARCH (Modelos de Autoregresión Generalizada de Heterocedasticidad Condicional)**
 - vii. **Curvas de J**
 - viii. **Cadenas de Márkov**
 - ix. **Maxima Probabilidad**
 - x. **Extrapolación No Lineal**
 - xi. **Regresión**
 - xii. **Curvas de S**
 - xiii. **Procesos Estocásticos**
 - xiv. **Análisis de Series de Tiempo**
 - xv. **Líneas de Tendencia**

Mejoras generales del Simulador de Riesgo Versión 4 en adelante:

- **Las funciones del Simulador de Riesgo de Excel:** Ahora puede accesar a las funciones del Simulador de Riesgo sin Excel con sólo hacer clic sobre la función de inserción en cualquier parte de la hoja de cálculo y desplazar a las funciones empezando con el Simulador de Riesgo. Aquí, puede ajustar las suposiciones así como obtener la estadística del pronóstico del variable del pronóstico. Por ejemplo, Usted puede ejecutar la función normal de la premisa del Simulador de Riesgo para ajustar a la celda la pemisa de la distribución normal o la estadística del pronóstico del Simulador de Riesgo para obtener la estadística de la celda de pronóstico. En el ajuste del pronóstico de la premisa, usted puede aplicar pausa o evaluar temporalmente si se muestra antes o después de ejecutar la simulación (Valor), el nombre de la premisa (Nombre del Variable), el parámetro de la distribución (por ejemplo, Desviación estándar de la Media), así como otros objetos así como valores de percentiles, correlaciones, límites mínimos y máximos. Para los resultados, usted puede usar incluso el *RSForecastStatistic(A1, "Percentile99.9")* para obtener el 99.90 de valores percentiles de la celda A1, donde esta celda tiene el ajuste del parámetro de pronóstico. Las funciones que pueden ser utilizados incluye: "PercentilesXXX", "CertezaXXX", "Media", "Medio", DesviaciónEstándar", "Varianza", "oblicuidad", y "Curtosis".
- **Clic Derecho en Excel:** Ahora usted puede usar el clic derecho del mouse para accesar a los objetos del Simulador de Riesgo rápidamente en Excel, así como las premisas, ajuste de pronósticos y ejecutar simulación.
- **Percentiles y Medias Condicionales:** En optimización estocástica, las estadísticas adicionales están disponibles ahora, incluyendo Percentiles así como las Medias Condicionales, así como obtener la media mientras que sean $> A$ ó $< A$, los cuales son fundamentales en los cálculos de los valores condicionales en medidas de riesgo.
- **Coeficiente de Variación (CV):** Ahora el valor de desviación media absoluta cambió al Coeficiente de Variación CV en la gráfica de estadísticas del pronóstico, en donde el CV es la desviación estándar dividido por la media, en ocasiones utilizadas como proxy de volatilidad, y es usual como medida relativa de riesgo al comparar diferentes tamaños de proyectos, utilizado así como la tasa de riesgo - rendimiento
- **Análisis de Escenario:** Esta nueva herramienta es utilizado para calcular varios escenarios en el modelo al cambiar uno o dos variables de entrada al mismo tiempo del rango de entradas para determinar los efectos sobre el resultado.
- **Tornado Poderoso:** Opciones y listas adicionales, así como el análisis de Tornado más poderoso y estable, en donde usted puede ejecutar el Tornado a través de múltiples hojas de cálculo, ajustes globales (cambiar el ajuste de prueba de 10% arriba y abajo, que puede controlar si el precedente individual fue cambiado o todo el ajuste de precedente fue cambiado), acentuar o ignorar los posibles valores integrales (a veces los valores integrales son usados como señales en el modelo y esta opción ayuda a identificar precedentes potenciales que desea ignorar para ejecutar el Tornado), nombres de las hojas de cálculo ahora se incluye en las tablas de sensibilidad para una identificación rápida y otras mejoras.
- **Frontera Eficiente:** Esta herramienta de optimización cuenta con la capacidad de ejecutar múltiples ajustes de optimización con cambios de restricciones. Usted puede acceder a ésta herramienta en la ventana de diálogo del Ajuste de Restricciones de la optimización. Esta técnica le permite ejecutar en concurrencia con optimización estática, dinámica y estocástica.
- **Re-habilitación del Simulador de Riesgo:** Esta herramienta está disponible en el menú de *Inicio / Programas / Evaluación de Opciones Reales / Simulador de Riesgo*. Permite

rehabilitar el programa si Windows o Excel deshabilita temporalmente el programa (esto puede ocurrir si hay una pausa poderosa cuando está corriendo la simulación, cuando existe virus o troyano en la computadora o accidentalmente eliminó algunos archivos fundamentales, etc.).

- **Optimización Multifacetica:** Ahora los módulos están compuestos con la Optimización Multifacetica y el botón de la opción avanzada (se habilita cuando ejecuta la optimización) para la prueba de Optimización Local contra Global. Estas dos aplicaciones cuando se usan juntas con la aplicación avanzada existente, permite al usuario tener más control sobre cómo la optimización va a ejecutarse, incrementando la certeza y dependencia de los resultados.
- **Herramienta Analítica Estadístico:** Seleccione los datos que desea analizar, incluyendo los encabezados y ejecute esta herramienta (se encuentra en *Simulador de Riesgo / Herramientas / Análisis Estadístico*), y encontrará las siguientes formas de análisis:
 - **Estadística Descriptiva**, incluye todos los 4momentos de la distribución así como otras medidas confiables.
 - **Acondicionamiento de la Distribución**, para ajustar si el ajuste de datos puede ser acondicionado a alguna distribución.
 - **Prueba de Hipótesis** para verificar si los datos son estadísticamente similar o diferentes de forma significativa que el valor específico.
 - **Extrapolación No Lineal** para probar si los datos, las series de tiempo son naturalmente no lineales.
 - **Normalidad** muestra si el ajuste de los datos son estadísticamente cercanas a la distribución normal. Esta es una característica muy importante como prueba de hipótesis, así como otras técnicas de modelación requiere de premisas de normalidad.
 - **Estimación de Parámetro Estocástico** para encontrar los parámetros de entrada del camino aleatorio, proceso de media reversiva, difusión con saltos y para decidir si las variaciones expuestas son suficientes para justificar el uso del pronóstico de proceso estocástico.
 - **Auto correlación** muestra los datos si el historial de los datos de series de tiempo pueden ser usado para predecir el futuro.
 - **Pronóstico de Series de Tiempo**, para probar los cambios básicos, tendencias y efectos de estacionalidad de los datos de series de tiempo.
 - **Tendencias Analíticas** para probar que el conjunto de datos sigue la tendencia lineal de tiempo, y si es así, qué nivel de predicción puede tener.
- **Herramienta Avanzada de Diagnóstico de Datos:** Seleccione los datos que desea analizar, incluyendo los encabezados y ejecute esta herramienta (se encuentra en *Simulador de Riesgo / Herramientas / Herramienta de Diagnóstico*), y encontrará las siguientes formas de análisis:
 - Heterocedasticidad.
 - Multicolinealidad.
 - Micro numerosidad.
 - No Linealidad.
 - Erráticos.
 - Autocorrelación.
 - Autocorrelación Parcial.
 - Retraso de Distribución.
 - Normalidad y Esfericidad.
 - No Estacionalidad.
 - Características Estocásticas.
 - Correlación Lineal y No Lineal.
 - Factores de Variación de la Inflación.

- Gráficas Visuales.

Estas pruebas son vitales antes de ejecutar *cualquier* tipo de pronósticos o procesos de análisis de los datos. Cada prueba vienen completos con una fácil comprensión del reporte detallado, por lo que no se requiere de un econométrista experimentado o estadista para comprender e interpretar los resultados.

- **Máxima Probabilidad:** Esto está disponible en (*Simulador de Riesgo / Pronóstico / Máxima Probabilidad*). En donde la iteración de la máxima probabilidad y los procesos de optimización interna son usados para los modelos con variables de respuesta binaria (el variable dependiente es binario, tomando los valores de 0 ó 1). Esta es la clave del análisis discriminativa con múltiples usos (por ejemplo, determinar si el paciente puede desarrollar cáncer dadas algunas características como edad, cigarros fumados, presión sanguínea; o determinar si la línea de crédito o la persona puede incumplir en el préstamo dados los activos de la empresa, la volatilidad de los activos ó la edad de la persona, nivel educacional, antigüedad en el trabajo, etc.).
- **Soporte de Multi-Lenguaje:** Contamos con el soporte de múltiples lenguajes: en Inglés(EEUU), Chino(Simplificado), Español y Japonés, Próximas ediciones con lenguajes adicionales. Usuarios puede hacer cambios de lenguajes mientras está trabaja en el modelo haciendo clic sobre el menú de **Simulador de Riesgo y Lenguajes** y reiniciando Excel.
- **Microsoft .NET Framework 2.0/3.0:** Hemos actualizado completamente nuestro código de fuente para trabajar continuamente con Microsoft .NET Framework 2.0/3.0. Esto traduce a una alta velocidad y mejor compatibilidad con nuevas computadoras.

REAL OPTIONS SUPER LATTICE SOLVER

REAL OPTIONS SLS 5.0

- OPCIONES AMERICANAS, ASIATICAS, BERMUDA, EUROPEAS y personalizadas
- Opciones de abandono, barrera, escogencia, contracción, expansión, esperar y diferir, simultánea, compuesta secuencial, Stage Gate, Opciones de cambio en la volatilidad, Opciones de activos multiples, todos los tipos de opciones financieras, opciones exóticas, Stock Options para empleados.
- Mas de 300 Opciones Exóticas y Avanzadas y opciones relacionadas a modelos (forma cerrada, aproximación americana, precios de estado, opciones sobre bonos, métodos analíticos de reducción de varianza, binomial, reversión a la media trinomial, Jump Diffusion cuadranomial, activo dual de composición de arco iris pentanomial, Dual Asset Rainbow Compound, Forfeitures, Suboptimal Exercise, Structured Financial Vehicles, Non-marketability Discount, Performance-Based Options, Simulation-Based Option Valuation, and much more)
- Crea infinitas combinaciones con su propio generador de Opciones
- Corre miles de redes en segundos
- El software está en Ingles, Español, Japonés y Portugués
- Software escalonado en excel en funcionalidad (simulación y optimización compatible)
- Materiales de soporte: 5 libros, DVD de entrenamiento, Cursos en video, manual del usuario, un archivo de ayuda, una gran biblioteca de archivos ejemplo, casos de negocios, consultas en tiempo real
- Ecuaciones y funciones visibles

REAL OPTIONS SUPER LATTICE SOFTWARE (SLS)

Muévase más allá de los papers academicos y la teoría, y empiece aplicar las Opciones Reales con este nuevo software. Real Options SLS es un software autónomo y sobre hojas de cálculo accesibles para analizar y valorar Opciones Reales, Opciones Financieras, Opciones Exóticas y Stock Options para empleados para incorporarlas dentro y a la medida de los modelos de hojas de cálculo. El nuevo diseño es más sofisticado dado que todas las ecuaciones y funciones matemáticas son visibles, desmitificando la obtención de resultados más fáciles de entender y explicar.

FUNCIONALIDAD DEL SOFTWARE, ALGORITMOS Y MODELOS

- Las Opciones reales como opciones compuestas secuenciales, opciones stage-gate y opciones de múltiples activos, con la combinación de opciones para abandonar, barrera, escoger, contraer, expandir, intercambiar, esperar y aplazar y cualquier otro uso específico; con la posibilidad de combinar y coincidir opciones (mutuamente excluyentes y opciones anidadas)
- Las Opciones financieras incluyen todo tipo de combinación de activos multiblés, opciones de benckmark, de garantía, vehículos de estructura financiera para opciones americanas, europeas, bermuda y asiáticas, así como la que usted quiera crear.
- Usted puede crear su propio modelo de opciones usando ecuaciones predefinidas o sus propias ecuaciones, donde una red de 1000- pasos binomiales puede ser resuelta en pocos segundos (algo que realizado manualmente le tardaría mas de 100 años en un computador), también incluye modelos benchmark de forma cerrada, Modelos desde Black-Scholes-Merton a otros modelos avanzados americanos de forma cerrada.
- El software está en Ingles, Español, Japones, Chino, Portugués así como un manual del usuario en múltiples idiomas. El manual tiene ejemplos de estudio de casos y paso a paso enseña técnicas de modelación y solución así como más de 80 modelos de ejemplo en detalle.
- Corre modelos binomiales, trinomiales (Opciones con reversión a la media), cuadranomiales (Opciones con Jump Difussion), pentanomiales (Opciones compuestas Arco Iris); así como más de 300 de modelos avanzados de opciones de forma cerrada (Modelos de precios de estado, métodos analíticos, cálculo de Volatilidades, reducción de varianza, Modelos de aproximación Americanos, Valoración de Opciones por técnicas de simulación, todos los tipos de Opciones para Bonos y garantías convertibles, opciones con cambio de volatilidad, otros modelos relacionados con opciones y mucho más).
- El SLS es completamente funcional con Excel, donde puede correr la simulación de Monte carlo para su modelo de opciones y lo puede enlazar de o para un modelo ya existente en Excel, y aplicar en otros modelos analíticos avanzados como en el Risk Simulator, optimización, pronósticos estocásticos y macros SLSL VBA
- Las ecuaciones y funciones para las redes son totalmente visibles en Excel con un modelo que enlaza ecuaciones dentro del excel y que son completamente visibles,,, es muy importante como herramienta para aprender a modelar opciones.
- SLS es una herramienta totalmente personalizable, con la posibilidad de permitir el ingreso de sus propias ecuaciones de opciones SLS
- El efecto de apalancamiento adicional sobre el análisis estático del VPN se adiciona una sofistificación financiera incluyendo una simulación más dinámica, un análisis de Opciones reales y una optimización que usted puede marcar para identificar, valorar, seleccionar y priorizar dentro del proyecto correcto para ganar y comprender bien la valoración estratégica y el manejo flexible de la decisión tomada
- Usted puede evaluar correctamente el valor intrínseco de un proyecto estratégico y eliminar la posibilidad de subvalorar el valor estratégico de ciertos proyectos, identificando y valorando futuras oportunidades estratégicas, así como incorporando nuevas decisiones en el tiempo, en contraposición del enfoque del VPN donde todas las decisiones se toman desde el principio.
- El software SLS es una herramienta que posee procesos fidedignos, repetibles y consistentes para para la toma de decisiones con un uso de manera amigable que le proveerá de las más poderosas herramientas para resolver problemas que no se pueden resolver de otro modo
- 5 libros de análisis de riesgo, opciones reales y valoración de opciones escritos por el creador del software y una serie de DVD de entrenamiento de Opciones Reales y Análisis de Riesgo (simulaciones, optimización, opciones reales, y estadística aplicada)

TRIAL y VERSION ACADEMICA

El software REAL OPTIONS SLS puede bajarse inmediatamente desde nuestro sitio web por un tiempo de 10 días de licencia. Nuestra filosofía es que usted entrene antes de comprarla, luego de que Usted la use, estamos convencidos que se enamorará de la simplicidad y del poder de estas herramientas que serán parte indispensable de sus herramientas de modelaje financiero. También se tiene una licencia académica para los profesores de tiempo completo que enseñan Análisis de Riesgo (y para sus estudiantes) o para otros cursos asociados que utilicen el Real Options SLS u productos de software de nuestra compañía. Por favor contáctenos para más detalle en admin@realoptionsvaluation.com

ENTRENAMIENTO Y CONSULTORIA

Herramientas Analíticas avanzadas como el software de Risk Simulator son construidos para un uso fácil, sin embargo si se usa inapropiadamente puede generar problemas. La comprensión de la teoría junto con una aplicación pragmática es vital, por lo tanto el entrenamiento es crítico.

Nuestro curso de Análisis de Riesgo es un seminario de dos días enfocado en un entrenamiento dado por un software, con temas que cubren lo básico en riesgos e incertidumbre y el uso de la simulación de Montecarlo y todos los métodos para pronóstico y optimización.

También tenemos un curso de Opciones Reales para analistas que quieran empezar a implementar inmediatamente Opciones reales en su trabajo, pero que no poseen la experiencia en el análisis y modelación de las opciones reales. En estos dos días de aprenderá como desarrollar un modelo de opciones reales, y a solucionar problemas de Opciones Reales usando simulación, soluciones matemáticas de forma cerrada, redes binomiales y multinomiales usando el software SLS.

El seminario de Certificación en la Gestión de Riesgo (CRM) es de 4 días y cubre el material de nuestros cursos de Análisis de Riesgo y de Análisis de Opciones Reales orientando hacia la certificación CRM provista por el Instituto internacional de profesionales en educación e investigación (AACSB)

Nuestro Análisis de Riesgo para Gerentes Senior es un curso especializado de 1 día para personas ejecutivas a nivel senior, donde se repasan casos de estudio del manejo de riesgo en empresas como 3M, Airbus, Boeing, GE y otras más. Se proveerá un enfoque gerencial del análisis de riesgo, Opciones Reales estratégicas y optimización de portafolio, y conceptos de riesgo sin detalles técnicos.

También están disponibles cursos para decisiones personalizadas, valoración y Análisis de Riesgo con énfasis en el entrenamiento que su firma exactamente necesita basados en sus propios casos y modelos de negocios. El servicio de consultoría está disponible e incluye el análisis de problemas de riesgo, simulación, análisis de riesgo, modelos de contrucción, análisis de decisión, optimización de software

EXPERIENCIA

El creador de este software es el **Dr. Johnathan Mun**. Profesor de Análisis de Riesgo y **Opciones Reales para Analistas, Análisis de Riesgo para Gerentes** y para el **Certificado de Gestión de Riesgos**, entre otros cursos. Ha sido consultor para muchas empresas del Fortune 500 (3M, Airbus, Boeing, General Electric, Motorola entre otras) y del Gobierno de los Estados Unidos (Departamento de Defensa, Agencias Estatales y federales) en Análisis de Riesgo, Valoración y Opciones Reales. El Dr. Mun ha escrito diversos libros sobre el tema como: *Real Options Analysis: Tools and Techniques, 1st and 2nd Edition* (Wiley Finance, 2005, 2002); *Real Options Analysis Course: Business Cases* (Wiley Finance, 2003); *Applied Risk Analysis: Moving Beyond Uncertainty in Business* (Wiley, 2003); *Valuing Employee Stock Options Under 2004 FAS 123* (Wiley Finance, 2004); *Modeling Risk: Applying Monte Carlo Simulation, Real Options Analysis, Forecasting and Optimization* (Wiley, 2006); *Advanced Analytical Models: 800 Functions and 300 Models from Basel II to Wall Street and Beyond* (Wiley 2008); *The Banker's Handbook on Credit Risk: Implementing Basel II* (Elsevier Academic Press 2008); El Dr. Mun es el fundador y CEO de REAL OPTIONS VALUATION INC. Y es el responsable del desarrollo de productos de Software para análisis, consultoría y entrenamiento. Anteriormente fué Vicepresidente de Análisis en Decisioneering, Inc (ORACLE), fué Gerente de Consultoría de KPMG, también fué Jefe de Pronósticos Financieros para Viking, Inc (Compañía de FedEx). El Dr. Mun también es Profesor en la U.S. Naval Postgraduate School y la University of Applied Sciences and Swiss School of Management (Zurich y Frankfurt), así como professor adjunto en otras Universidades. Posee un Ph.D. in Finance and Economics, un MBA in business administration, y un M.S. in the area of management science, un BS in applied sciences. Posee el Certified in Financial Risk Management (FRM), Certified in Financial Consulting (CFC), and Certified in Risk Management (CRM).

The screenshot displays the 'Creador de Árboles' application window. At the top, there's a menu bar with options like 'Archivo', 'Opciones', 'Ayuda', and 'Expansión'. Below the menu, there are two radio buttons: 'Aplicar la Volatilidad Promedio desde el Activo Subyacente' and 'Aplicar la Volatilidad Correlacionada del Portafolio del Subyacente'. Under the 'Assumptions' section, there are dropdown menus for 'PV Asset Value (\$)', 'Volatility (%)', 'Risk-free Rate (%)', 'Dividends (%)', and 'Maturity (Years)'. The 'Underlying Asset Lattice' section shows a 5x5 grid of values representing asset prices over time. The 'Option Valuation Lattice' section shows a 10x10 grid of values representing option prices over time. On the right side, there are sections for 'Entradas Básicas' (Basic Inputs) and 'Opción Básica' (Basic Option), which include fields for 'Costo de Implementación', 'Factor de Expansión', 'Costo de Contracción', and 'Valor de Rescate por Abandono'. There are also sections for 'Opciones de Combinación' (Combination Options) and 'Mostrar las Fórmulas' (Show Formulas). A large 'Calcular' (Calculate) button is located at the bottom right.

Opciones SLS | Gráfico de Pagos | Sensibilidad | Escenario | Convergencia

Entre mayor sea el número de pasos del enrejado, mayor el nivel de precisión del resultado de la opción. (lo cual solo implica posiciones decimales adicionales). En algún punto, dicho resultado del enramado converge. El test de convergencia, ejecuta entre 5 y 5000 pasos, para determinar el nivel de convergencia. A partir de este punto, un número de pasos superior es innecesario.

Pasos en los que converge el enrejado

ROV MODELING TOOLKIT 1.2

- Biblioteca con 300 modelos de plantilla y cerca de 800 modelos en Excel
- Trabaja complementariamente con Risk Simulator y aplicaciones del Real Options SLS
- Cubrimiento detallado de temas incluyendo las áreas generales de
 - Análisis
 - Modelos Bancarios
 - Análisis Crediticio
 - Análisis de Deuda
 - Análisis de Decisión
 - Opciones Exóticas
 - Pronósticos
 - Aplicaciones a la Industria
 - Optimización
 - Análisis de Opciones
 - Probabilidad de Incumplimiento
 - Dirección de Proyectos
 - Real Options SLS
 - Análisis de Riesgo
 - Cobertura de Riesgo
 - Sensibilidad
 - Simulación
 - Six Sigma
 - Valoración
 - Valor en Riesgo
 - Volatilidad
 - Curva de Rendimiento

ROV MODELING TOOLKIT ROV MODELING TOOLKIT comprende cerca de 800 modelos analíticos, funciones y herramientas, y cerca de 300 plantillas sobre modelos analíticos Excel/SLS, hojas de cálculo que cubren las áreas de análisis de riesgo, simulación, pronósticos, análisis de riesgo Basilea II, riesgo de crédito y defecto, modelos estadísticos y mucho más! Este kit es un set de sofisticados modelo matemáticos escritos en C++ y vinculados a hojas de cálculo de Excel. Hay un total de 1100 modelos, funciones, con hojas de cálculo y plantillas SLS que cubren las áreas de:

Análisis: Central Limit Theorem, Central Limit Theorem (Lottery Analysis), Flaw of Averages, Mathematical Integration, Parametric and Nonparametric Hypothesis Tests Dataset, Projectile Motion, Regression Diagnostics, Ships in the Night, Statistical Analysis, Weighting of Ratios

Modelos Bancarios: Audit of Construction Lending, Banker's Construction Budget, Classified Breakeven Loan Inventory, Classified Loan Borrowing Base, Classified Loan Cash Budget and Overdraft Facilities, Federal Reserve Camels Rating System, Firm in Financial Distress, Project Finance Risk Rating Model, Queueing Models, Reconciling Enron's Cash Flow, Risk Rating Model, Sample Cash Flows, Sensitivity Projections, Stochastic Loan Pricing Model, Valuation and Appraisal

Analisis de Crédito: Credit Default Swaps and Credit Spread Options, Credit Default Swaps (with Counterparty Defaults and Correlations), Credit Premium, Credit Risk and Effects on Prices, External Debt Rating and Spreads, Internal Credit Risk Rating Model, Profit Cost Analysis of New Credit, Debt Analysis, Asset Equity Parity Model, Cox Model on Price and Yield of Risky Debt with Mean Reverting Rates, Debt Repayment and Amortization, Debt Sensitivity Models, Merton Price of Risky Debt with Stochastic Asset and Interest, Vasicek Debt Option Valuation, Vasicek Price and Yield of Risky Debt

Analisis de Decisión: Decision Tree Basics, Decision Tree with EVPI, Minimax and Bayes Theorem, Economic Order Quantity and Inventory Reorder Point, Economic Order Quantity and Optimal Manufacturing, Expected Utility Analysis, Inventory Control, Queueing Models

Opciones Exóticas: American, Bermudan and European Options, Asian Arithmetic, Asian Geometric, Asset or Nothing, Barrier Options, Binary Digital Options, Cash or Nothing, Commodity Options, Complex Chooser, Credit Spread Options, Currency Options, Double Barriers, Exchange Assets, Extreme Spread, Foreign Equity Linked Forex, Foreign Equity Domestic Currency, Foreign Equity Fixed Forex, Foreign Takeover Options, Forward Start, Futures and Forward Options, Gap Options, Graduated Barriers, Index Options, Inverse Gamma Out-of-the-money Options, Jump Diffusion, Leptokurtic and Skewed Options, Lookback Fixed Strike Partial Time, Lookback Fixed Strike, Lookback Floating Strike Partial Time, Lookback Floating Strike, Min and Max of Two Assets, Option Collar, Options on Options, Perpetual Options, Simple Chooser, Spread on Futures, Supershares, Time Switch, Trading Day Corrections, Two Assets Barrier, Two Assets Cash, Two Assets Correlated, Uneven Dividends, Writer Extendible

Pronósticos: Brownian Motion Stochastic Process, Data Diagnostics, Econometric, Correlations and Multiple Regression Modeling, Exponential J-Growth Curves, Forecasting Manual Computations, Jump-Diffusion Stochastic Process, Linear Interpolation, Logistic S-Growth Curves, Markov Chains and Market Share, Mean-Reverting Stochastic Process, Multiple Regression, Nonlinear Extrapolation, Stochastic Processes and Yield Curves, Stock Distribution at Horizon, Time-Series Analysis, Time-Series ARIMA

Aplicaciones a la Industria: Asset Liability Management ALM, Biotech: Manufacturing Strategy, Biotech-In-licensing and Deal Structuring, Biotech: Investment Valuation, Electric Utility: Efficient Frontier Generation, Electric Utility: Electricity Contract Risk, Information Technology: Forecasting Use, Information Technology: Decision Analysis, Pensions: Closed Group Portfolio Matching, Pensions: Accounting Modeling and Optimization, Real Estate: Commercial ROI

Optimizacion: Capital Investments (Part A), Capital Investments (Part B), Continuous Portfolio Allocation, Discrete Project Selection, Inventory Optimization, Investment Portfolio Allocation, Military Portfolio and Efficient Frontier, Optimal Pricing with Elasticity, Optimization of a Harvest Model, Optimizing Ordinary Least Squares, Stochastic Portfolio Allocation

Analisis de Opciones: Binary Digital Instruments, Inverse Floater Bond Lattice Maker, Options Adjusted Spreads on Debt, Options on Debt, Options Trading Strategies

Probabilidad de Incumplimiento: Empirical (Individuals), External Options Model (Public Company), Merton Internal Model (Private Company), Merton Market Options Model (Industry Comparable), Yields and Spreads (Market Comparable)

Dirección de Proyectos: Cost Estimation Model, Critical Path Analysis (CPM PERT GANTT), Project Timing

Opciones Reales SLS: Employee Stock Options: Simple American Call, Employee Stock Options: Simple Bermudan Call with Vesting, Employee Stock Options: Simple European Call, Employee Stock Options: Suboptimal Exercise, Employee Stock Options: Vesting and Suboptimal Exercise, Employee Stock Options: Vesting, Blackout, Suboptimal, Forfeiture

Opciones Exóticas: American Call Option with Dividends, Exotic Options: Accruals on Basket of Assets, Exotic Options: American Call Option on Foreign Exchange, Exotic Options: American Call Option on Index Futures, Exotic Options: Barrier Option: Down and In Lower Barrier, Exotic Options: Barrier Option: Down and Out Lower Barrier, Exotic Options: Barrier Option: Up and In Upper Barrier Call, Exotic Options: Barrier Option: Up and In, Down and In Double Barrier Call, Exotic Options: Barrier Option: Up and Out Upper Barrier Call, Exotic Options: Barrier Option: Up and Out, Down and Out Double Barrier Call, Exotic Options: Basic American, European, versus Bermudan Call Options, Exotic Options: Chooser Option, Exotic Options: Equity Linked Notes, Exotic Options: European Call Option with Dividends, Exotic Options: Range Accruals

Analisis de Opciones: Plain Vanilla Call Option I, Options Analysis: Plain Vanilla Call Option II, Options Analysis: Plain Vanilla Call Option III, Options Analysis: Plain Vanilla Call Option IV, Options Analysis: Plain Vanilla Put Option

Opciones Reales: Abandonment American Option, Real Options: Abandonment Bermudan Option, Real Options: Abandonment Customized Option, Real Options: Abandonment European Option, Real Options: Contraction American and European Option, Real Options: Contraction Bermudan Option, Real Options: Contraction Customized Option, Real Options: Dual-Asset Rainbow Option Pentanomial Lattice, Real Options: Excel-based Options Models, Real Options: Exotic Complex Floating American Chooser, Real Options: Exotic Complex Floating European Chooser, Real Options: Expand Contract Abandon American and European Option, Real Options: Expand Contract Abandon Bermudan Option, Real Options: Expand Contract Abandon Customized Option I, Real Options: Expand Contract Abandon Customized Option II, Real Options: Expansion American and European Option, Real Options: Expansion Bermudan Option, Real Options: Expansion Customized Option, Real Options: Expansion: Jump Diffusion Calls and Puts using Quadrinomial Lattices, Real Options: Mean Reverting Calls and Puts using Trinomial Lattices, Real Options: Multiple Asset Competing Options (3D Binomial), Real Options: Multiple Phased Complex Sequential Compound Option, Real Options: Multiple Phased Sequential Compound Option, Real Options: Multiple Phased Simultaneous Compound Option, Real Options: Simple Calls and Puts using Trinomial Lattices, Real Options: Simple Two Phased Sequential Compound Option, Real Options: Simple Two Phased Simultaneous Compound Option, Real Options: Strategic Cases: High: Tech Manufacturing Strategy A, Real Options: Strategic Cases: High-Tech Manufacturing Strategy B, Real Options: Strategic Cases: High-Tech Manufacturing Strategy C, Real Options: Strategic Cases: Oil and Gas: Strategy A, Real Options: Strategic Cases: Oil and Gas: Strategy B, Real Options: Strategic Cases: R&D Stage-Gate Process A, Real Options: Strategic Cases: R&D Stage-Gate Process B, Real Options: Strategic Cases: Switching Option's Strategy A, Real Options: Strategic Cases: Switching Option's Strategy B

Enrejados Trinomiales: American Call Option, Trinomial Lattices: American Put Option, Trinomial Lattices: European Call Option, Trinomial Lattices: European Put Option, Trinomial Lattices: Mean Reverting American Call Option, Trinomial Lattices: Mean Reverting American Put Option, Trinomial Lattices: Mean Reverting European Call Option, Trinomial Lattices: Mean Reverting European Put Option, Trinomial Lattices: Mean Reverting American Abandonment Option, Trinomial Lattices: Mean Reverting American Contraction Option, Trinomial Lattices: Mean Reverting American Expansion Option, Trinomial Lattices: Mean Reverting American Abandonment, Contraction, Expansion, Trinomial Lattices: Mean Reverting Bermudan Abandonment, Contraction, Expansion, Trinomial Lattices: Mean Reverting Abandonment, Contraction, Expansion, Trinomial Lattices: Mean Reverting European Abandonment, Contraction, Expansion

Enrejados Cuadrinomiales: Jump Diffusion American Call Option, Quadrinomial Lattices: Jump Diffusion American Put Option, Quadrinomial Lattices: Jump Diffusion European Call Option, Quadrinomial Lattices: Jump Diffusion European Put Option

Enrejados Pentanomiales: American Rainbow Call Option, Pentanomial Lattices: American Rainbow Put Option, Pentanomial Lattices: Dual Reverse Strike American Call (3D Binomial), Pentanomial Lattices: Dual Reverse Strike American Put (3D Binomial), Pentanomial Lattices: Dual Strike American Call (3D Binomial), Pentanomial Lattices: Dual Strike American Put (3D Binomial), Pentanomial Lattices: European Rainbow Call Option, Pentanomial Lattices: European Rainbow Put Option, Pentanomial Lattices: Exchange of Two Assets American Call (3D Binomial), Pentanomial Lattices: Maximum of Two Assets American Call (3D Binomial), Pentanomial Lattices: Maximum of Two Assets American Put (3D Binomial), Pentanomial Lattices: Minimum of Two Assets American Call (3D Binomial), Pentanomial Lattices: Minimum of Two Assets American Put (3D Binomial), Pentanomial Lattices: Portfolio American Call (3D Binomial), Pentanomial Lattices: Portfolio American Put (3D Binomial), Pentanomial Lattices: Spread of Two Assets American Call (3D Binomial), Pentanomial Lattices: Spread of Two Assets American Put (3D Binomial)

Analisis de Riesgo: Integrated Risk Analysis, Interest Rate Risk, Portfolio Risk and Return Profile

Cobertura de Riesgo: Delta Gamma Hedge, Delta Hedge, Effects of Fixed versus Floating Rates, Foreign Exchange Cash Flow Model, Foreign Exchange Exposure Hedging

Sensibilidad: Greeks, Tornado and Sensitivity Charts Linear, Tornado and Sensitivity Nonlinear

Simulación: Basic Simulation Model, Best Surgical Team, Correlated Simulation, Correlation Effects Model, Data Fitting, DCF, ROI and Volatility, Debt Repayment and Amortization, Demand Curve and Elasticity Estimation, Infectious Diseases, Recruitment Budget (Negative Binomial and Multidimensional Simulation), Retirement Funding with VBA Macros, Roulette Wheel, Time Value of Money

Six Sigma: Confidence Intervals with Hypothesis Testing, Control Charts (c, n, p, u, X, XmR, R), Delta Precision, Design of Experiments and Combinatorics, Hypothesis Testing and Bootstrap Simulation, Sample Size Correlation, Sample Size DPU, Sample Size Mean, Sample Size Proportion, Sample Size Sigma, Statistical Analysis (CDF, PDF, ICDF) with Hypothesis Testing, Statistical Capability Measures, Unit Capability Measures

Valoración: APT, BETA and CAPM, Buy versus Lease, Caps and Floors, Convertible Bonds, Financial Ratios Analysis, Financial Statements Analysis, Valuation Model, Valuation: Warrant Combined Value, Valuation: Warrant Put Only, Valuation: Warrant Only

Valor en Riesgo: Optimized and Simulated Portfolio VaR, Options Delta Portfolio, Portfolio Operational and Capital Adequacy, Right Tail Capital Requirements, Static Covariance Method

Volatilidad: EWMA Volatility Models, GARCH Volatility Models, Implied Volatility, Log Asset Returns Approach, Log Cash Flow Returns Approach Probability to Volatility

Curva de Rendimiento: CIR Model, Curve Interpolation BIM, Curve Interpolation NS, Forward Rates from Spot Rates, Spline Interpolation and Extrapolation, Term Structure of Volatility, US Treasury Risk Free Rate, Vasicek Model

MODELO ROV, OPTIMIZADOR ROV, ROV VALUATOR, PROGRAMADOR ROV, ROV CHARTER, MODELO ROV BASILEA II

- Análisis de Miles de millones de datos a altas velocidades
- Compatible con bases de datos ODBC, incluidos Oracle OFDM, Excel, archivos de texto planos y otros sistemas DSN.
- Simulación de Monte Carlo, Optimización de Portafolio, Pronósticos Estocásticos y Análisis Avanzado (Ajustes de Datos, Diagnóstico de Datos, Simulaciones, ARIMA, GARCH, y mas de 600 modelos de análisis financiero)
- Los Resultados son compatibles con el ROV Dashboard en linea para gestión segura de información, los análisis son compatibles con el Simulador de Riesgo ROV y ROV Real Options SLS software y los modelos son compatibles con ROV Modeling Toolkit
- Modelos totalmente personalizables y modelos de industria específica (Riesgo de Mercado y Crédito Basilea II)
- Limpia su Base de datos con los controles de integridad de datos y commandos SQL antes de utilizar los datos de su análisis.
- Programar los modelos o los portafolios individuales para que funcionen en momentos específicos ya sea en un dia o en una semana

ROV RISK MODELER es un software, desarrollado por Real Options Valuation, Inc., que incluye varios módulos. Este Software toma los modelos fuera de Excel y los mete en el entorno de su base de datos, permitiendo al usuario final la posibilidad de vincular directamente a la base de datos o a bases de datos más grandes, también limpia los datos y corre análisis avanzados a velocidades muy altas. El ROV RISK MODELER se compone de varios módulos , entre ellos:

- ROV Modeler es un software avanzado creado para la solución de varios tipos de modelos, incluidos los modelos computacionales en varias industrias, modelos de simulación y pronósticos, Ajustes de Datos Históricos, series de tiempo provisionales (ARIMA, Econometría Automática, Regresiones, Procesos Estocásticos y otros), Volatilidad computacional (de cálculo) (GARCH) y muchas otras aplicaciones. También se incluye en este módulo (así como el Basel Modeler y el módulo de Optimización de Riesgo) tienen la capacidad de enlace y descarga de diversas bases de datos y fuentes de datos (ejm., Oracle OFDM, SQL Server, Excel, CSV, text y otras bases de datos compatibles con ODBC). Limpiar la pantalla de datos antes de su uso (aplicando comandos SQL y rutinas de limpieza de datos), calcular nuevas variables sobre la base de datos existente, ejecutar simulaciones de riesgo de Monte Carlo, aplicar datos de distribución y montaje y otras rutinas. Este módulo es personalizable ya que los usuarios pueden modificar la lista de funciones, descripciones y que modelos o aplicaciones se deben mostrar, permitiendo a los usuarios personalizar la herramienta para adaptarse a sus necesidades. El ROV Modeler también es personalizable en el que las listas de los modelos pueden ser cambiadas o editadas según las necesidades, en el cual puede decidir que modelos son importantes para mostrarlos o usado, mientras otros pueden ser bloqueados o eliminados (ejm., Diferentes departamentos, unidades de negocio o grupos industriales pueden tener su propio modelo personalizado).
- ROV MODELER BASILEA II es un módulo de software de análisis avanzado para la solución de múltiples tipos de modelos, incluidos los modelos computacionales en varias industrias (ejm., para bancos, compañías de seguro y servicios financieros, tales como los modelos de probabilidad de incumplimiento (quiebra), pérdida por incumplimiento en los pagos, exposición al no pago, Valor de Riesgo y otros indicadores claves). También funciona como el ROV Modeler descrito anteriormente
- Optimizador ROV tiene la capacidad de ejecutar con rapidez la selección de proyectos de inversión o portafolios y la optimización no lineal, con simulaciones y optimizaciones estocásticas, al mismo tiempo utilizando enteros discretos, binarios y las variables continuas sujetas a múltiples restricciones, así como un análisis de frontera eficiente. La optimización puede ejecutarse en cientos de variables de decisión y los resultados se calculan rápidamente.
- ROV RISK VALUATOR tiene más de 600 modelos y funciones para valorar todo desde opciones simples y exóticas hasta commodities, futuros y perfiles de retorno-riesgo de portafolios de activos y así sucesivamente. Por favor vease el Apéndice para una lista más detallada de los modelos disponibles.
- ROV CHARTER ejecuta diferentes modelos y archivos de optimización y retorna archivos predefinidos en XML que pueden ser utilizados por ROV Dashboard para generar gráficos dinámicos, tablas, tablas pivotes y reportes. ROV Dashboard es otro programa desarrollado por Real Options Valuation, Inc.
- ROV Scheduler ejecuta diferentes Modelos, optimización, gráficos y archivos de portafolio y retornos, el resultado es un archivo de texto plano que puede ser guardado o cargado en excel o otra base de datos.
- PORTAFOLIO ROV ejecuta múltiples Modelos y Optimiza archivos y múltiples modelos inmediatamente. Este es similar al SCHEDULER en el que múltiples modelos pueden ser escogidos para que se ejecuten desde diferentes perfiles, pero la diferencia es que los análisis funcionan inmediatamente al contrario de los que se ejecutan en un momento determinado.

VERSIÓN DE PRUEBA

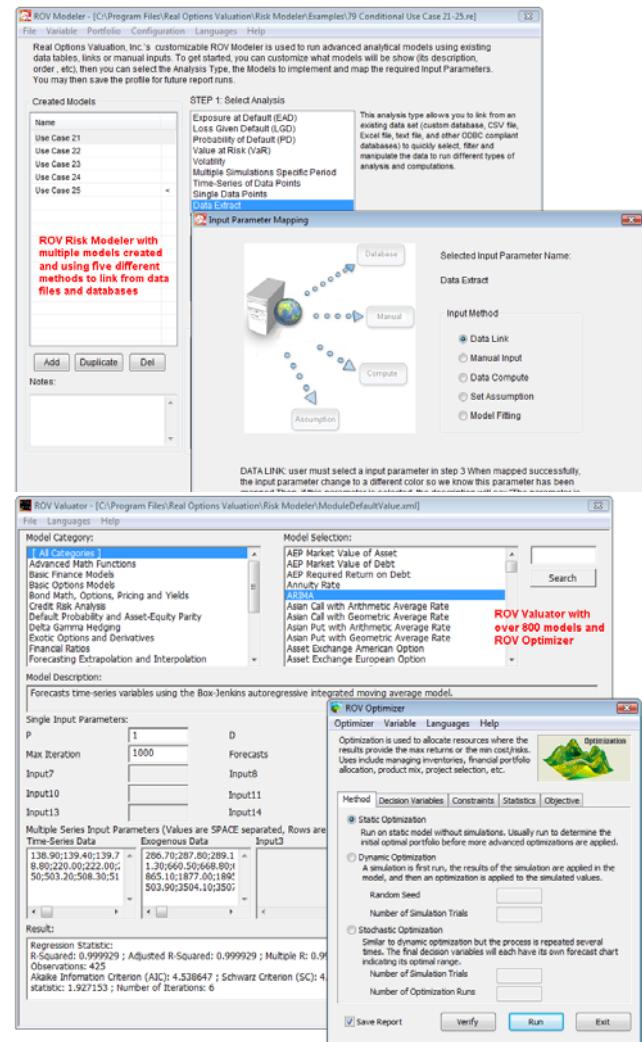

No Existen versiones de prueba de este software ya que la implementaciones de este software requieren entrenamiento y consulta sobre los temas.

En adición, el ROV MODELER software tiene la habilidad de:

- Limpie y filtre su base de datos a través de Data Integrity y SQL Conditional screener y Data Compute capabilities y revise su calidad de datos a través de las funciones de Data Diagnostic
- Ejecutar Modelos individuales o modelos de portafolios con determinado calendario, cuando la herramienta se descarga automáticamente los enlaces de las bases de datos o los archivos de datos, ejecutara el análisis y devuelva el resultado en XML o formato de archivos de datos
- Proporciona 5 métodos de mapear la variable, para extraer y bajar los datos de su base de datos o archivos de datos para su análisis, incluyendo el Ajuste de datos, datos y cálculos variables, supuestos y simulaciones distribucionales , Manual de Entrada y Enlace de Datos a los ficheros.
- Se Ejecuta en un sólo núcleo o núcleos múltiples con hilos de distribución y procesamiento distributivo
- Disponible en Inglés, Chino, Japones, Español, Portugués y muchos más idiomas.

REQUISITOS DEL SISTEMA

Este software puede ser ejecutado con cualquier plataforma de Windows o Mac (el sistema operativo MAC requiere una máquina virtual que emule el ambiente de Windows), y es compatible con Microsoft Excel como también las otras bases de datos o archivos de datos compatibles a ODBC. El software requiere 100MB de espacio libre en el disco duro y recomienda un mínimo de 1Gb de Memoria RAM para su mejor desempeño. Nosotros recomendamos que el usuario tenga derechos administrativos (esto es por defecto en la mayoría de ordenadores personales), pero también puede ejecutarse con logins de derechos de usuarios limitados (simplemente instala el software a un archivo o carpeta no protegida para el correcto funcionamiento del software).

$$f_{a,\sigma^2}(\xi) = \frac{1}{\sqrt{2\pi}\sigma} e^{-\frac{(\xi-a)^2}{2\sigma^2}}$$

$$f(x, \theta) dx = M\left(T(\xi) \cdot \frac{\partial}{\partial \theta} \ln L(\xi, \theta)\right) dx$$

$$T(x) \cdot \left(\frac{\partial}{\partial \theta} \ln L(x, \theta) \right) \cdot f(x, \theta) dx = \int_{R_x} T(x) \left(\frac{\partial}{\partial \theta} \frac{f(x)}{f(x, \theta)} \right) dx$$

$$\partial_{\theta} \ln T(x) f(x, \theta) dx = \int \frac{\partial}{\partial \theta} T(x) f(x) dx$$

$$MT(\xi) =$$

ROV COMPILER 1.0

- Compila cualquier modelo existente de Excel 2002, 2003, 2007 en EXE
- Los Archivos Compilados funcionarán exactamente igual que un archivo de Excel, con todas la funcionalidades de Excel, pero el usuario final no tendrá acceso a los cálculos, las funciones o a la lógica.
- Todos los cálculos se encajan en formato binario, que están encriptados y el usuario final no tiene acceso
- Distribuya con seguridad el modelo sin perder el control de propiedad intelectual o algún secreto de la compañía
- Se Bloquea mediante un cifrado de 2048 Bits RSA (más poderoso y seguro que la misma protección militar)
- Cree las Licencias de Usuario (número de aplicaciones, la fecha y número de días)
- Mantiene un estricto control de calidad y previene la manipulación maliciosa o rotura accidental del modelo (no más enlaces rotos, funciones y cálculos equivocados y así sucesivamente)
- Puede ser usado por terceras aplicaciones informáticas en un ambiente llamado modo de la consola de mando de componentes basados de modelaje
- Use Excel como plataforma de programación en lugar de solo

ROV COMPILER sirve como convertidor de archivos de Microsoft Excel XP, 2003 y 2007 para extraer un modelo existente en relaciones matemáticas puras y para cifrar que el mismo modelo puede ser usado como de costumbre, pero la característica intelectual de esta, está protegida. Usted puede utilizar a Excel como herramienta del desarrollo de programas en vez de herramienta de modelado. Es decir, suponga que usted es un experto en cierta industria ya sea en actividades bancarias, farmacéuticas, biotecnología, manufactureras, aseguradoras, aeronáuticas y así sucesivamente, suponga que usted ha desarrollado modelos y hojas de trabajo en Excel que son apropiadas para su uso y para usos en otros campos. Usted puede utilizar el ROV Compiler para crear archivos ejecutables en EXE desde los modelos existentes en Excel, y tratar la matemática, la lógica computacional y los negocios en código binario y crear un hardware extremadamente seguro y con licencia de protección de sus archivos para poderlo distribuir como un programa informático. El archivo compilado cuando se corre tendrá el mismo ambiente que Excel, menos la habilidad de tener acceso lógico a cálculos críticos, mas la habilidad de asegurarlos y licenciarlos como los programas informáticos regulares. Existen programas de dominio público que pueden craquear las contraseñas de Excel rápidamente y sin esfuerzo, pero esos programas no son capaces de trabajar en archivos compilados. Ejecutando el Modelo extraído, varios artículos son completados, a saber:

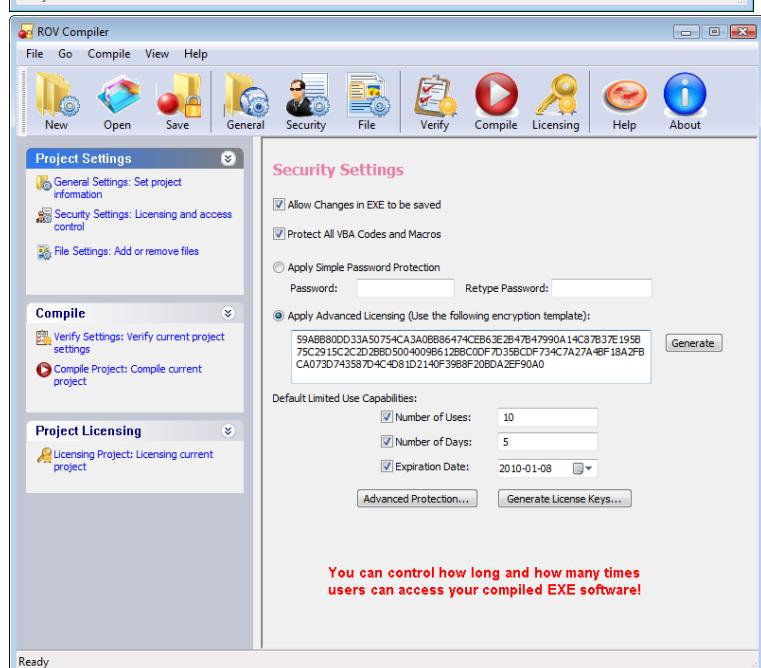

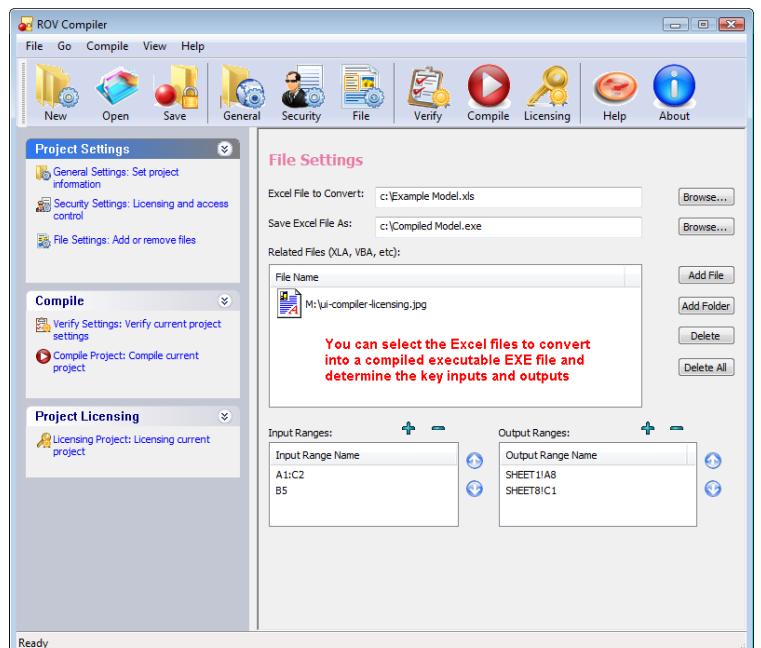

- Use Excel como plataforma de programación en lugar de solo modelación... no es necesario aprender de programación avanzada para crear su propio software con autorizado.
- Cualquier archivo existente de Excel 2002, 2003, 2007 y más allá puede ser compilado o extraído de Excel XLS o XLSC y convertirlo en código matemático binario y el archivo se convertirá en un archivo EXE ejecutable, que cuando se ejecute abrirá a Excel. El archivo funcionará exactamente como un archivo de Excel, con todas las funciones de Excel, pero el usuario final no tendrá acceso a los cálculos, las funciones o la lógica. Parecerá y se sentirá como si fuera Excel pero los cálculos estarán en formato binario encriptado y el usuario final no tendrá acceso.
- Toda la inteligencia empresarial y relaciones se mantienen pero no serán más visible al usuario final, permitiendo al creador del modelo distribuir con seguridad el modelo sin pérdida de control de propiedad intelectual o secretos de la compañía.
- El modelo compilado se bloquea mediante un cifrado de 2048 Bits RSA (más poderoso y seguro que la misma protección militar) y puede solemnemente ser accesible usando la contraseña y licencia correcta (usando el hardware que trabaja con algoritmos)
- El usuario final no puede cambiar el modelo compilado pero se mantiene un control de calidad estricto y previene trampas maliciosas o fracturas accidentales del modelo (ejm., las ecuaciones y las funciones con acoplamientos rotos o las funciones y cálculos incorrectos, etc.).
- El Archivo compilado también se puede utilizar por aplicaciones informáticas tercera en un ambiente de Componentes Basados en Modelaje. Por ejemplo, el usuario final puede tener su propio software o base de datos con cálculos predefinidos. El archivo compilado se liga en y es una parte de este sistema y se puede llamar modo de la consola de comando. Usted obtiene la propiedad del sistema y simplemente obtiene las entradas o links para compilar los archivos o los modelos para realizar los cálculos y devolver las salidas requeridas.

REQUISISTOS DEL SISTEMA

Este software puede ser ejecutado con cualquier plataforma de Windows o Mac (el sistema operativo MAC requiere una máquina virtual que emule el ambiente de Windows), y es compatible con Microsoft Excel como también las otras bases de datos o archivos de datos compatibles a ODBC. El software requiere 30Mb de espacio libre en el disco duro y recomienda un mínimo de 1Gb de Memoria RAM para su mejor desempeño.

Utilice por favor el software ROV Extractor y Evaluator en lugar de otro, también desarrollado por Real Options Valuation, Inc., si usted desea extraer el modelo en un archivo que funcione totalmente fuera de Excel (extraido en archive EXE) donde todos sus cálculos se ocultan y protegen. El ROV Extractor y Evaluator se complementa con el software ROV Compiler tal que un modelo muy largo que tardaba mucho tiempo para ejecutarse en Excel ahora puede ejecutarse a una velocidad extremadamente rápida en el modelo levantado EXE. Las simulaciones de Riesgo de Monte Carlo de gran escala y con gran número de pruebas pueden desarrollarse a una velocidad muy rápida. Los modelos grandes con muchas partes irrelevantes se identifican y adicionalmente, usted puede identificar las entradas dominantes y las salidas principales que usted deseaba haber modelado. Por ejemplo, en un modelo como A+B+C=D, B+E=F, y si F se elige como salida dominante, solo B y E son relevantes. Esto disminuye el tiempo computacional para el modelo en identificar las variables de entrada, y el modelo entonces se puede optimizar para funcionar más rápidamente una vez que el tema del modelo se identifica. El modelo largo de Excel se puede dar vuelta en una calculadora, donde todo usuario final tiene que meter las variables de entrada y obtener las salidas. Imagínese como crear una función muy grande de Visual Basic en Excel, pero en vez de una función simple con varias líneas de cálculos, esta función es un libro de trabajo con muchas hojas de trabajo interconectadas.

ROV EXTRACTOR y ROV EVALUATOR 1.1

- ROV EXTRACTOR compila un modelo existente de Excel 2007 en un archivo EXP que sólo puede ser corrido en el ROV EVALUATOR.
 - Toda la información del negocio y las relaciones en los modelos se mantienen pero no pueden ser vistas por el usuario final con el fin de que el creador del modelo lo pueda distribuir de una forma segura sin que pierda cualquier propiedad intelectual o información secreta de la compañía.
 - Un modelo grande que puede tomar mucho tiempo de correr en Excel, ahora puede ser corrido en pocos segundos (1 millón de simulaciones en un modelo de tamaño regular, toma unos pocos segundos en correrse).
 - El modelo extraído puede ser asegurado usando una codificación RSA 1028 (protección similar a información militar), y solo se puede acceder con la contraseña correcta.
 - Modelos grandes que tienen varias partes irrelevantes, son identificados únicamente con sus entradas y salidas claves para así reducir el tiempo.
 - El modelo grande de Excel puede ser convertido en algo similar a una calculadora: introducir los inputs para obtener los outputs.
 - Cree un nuevo paradigma en modelación! Los archivos extraídos son similares a crear una función Visual Basic en Excel, pero en vez de una función con muchas líneas se convierte en un archivo de Excel con hojas de cálculo conectadas.
 - Distribuya el modelo sin perder control de la propiedad intelectual y los secretos de la compañía.
 - Mantenga control estricto de calidad y rotura accidentales del modelo (no mas enlaces malos, o funciones y cálculos incorrectos).
 - Use Excel como plataforma de programación y no solo de modelación, no necesita aprender software avanzado de programación para crear su propio software.

ROV EXTRACTOR & ROV EVALUATOR es producido por Real Options Valuation Inc. Y trabaja con Excel 2007 y posteriores. Este software puede ser usado en Microsoft Excel 2007 para extraer un modelo existente en puras relaciones matemáticas para que el mismo modelo pueda ser corrido por fuera de Excel. Al correr el modelo extraído los siguientes ítems son alcanzados :

- Toda la información del negocio y las relaciones en los modelos se mantienen pero no pueden ser vistas por el usuario final con el fin de que el creador del modelo lo pueda distribuir de una forma segura sin que pierda cualquier propiedad intelectual o información secreta de la compañía.
- Un modelo grande que puede tomar mucho tiempo de correr en Excel, ahora puede ser corrido en pocos segundos.
- Simulaciones de Riesgo Monte Carlo de gran escala pueden ser realizadas a altas velocidades.
- El modelo extracto puede ser asegurado usando una codificación RSA 1028 (protección similar a información militar), y solo se puede acceder con la contraseña correcta.
- Identifica las partes irrelevantes de los modelos y adicionalmente puede identificar los inputs y outputs claves para la modelación. Por ejemplo en un modelo como A+B+C=D, B+E=F, y si F es escogida como el input clave o relevante, solo B y E son relevantes. Esto disminuye el tiempo del modelo identificando los inputs críticos, y el modelo luego puede ser optimizado para que corra más rápido.
- El modelo largo de Excel puede ser convertido en algo similar a una calculadora: introducir los inputs para obtener los outputs. Los archivos extraídos son similares a crear una función Visual Basic en Excel, pero en vez de una función con muchas líneas se convierte en un archivo de Excel con hojas de cálculo conectadas.
- Mantenga control estricto de calidad y rotura accidentales del modelo (no mas enlaces malos, o funciones y cálculos incorrectos).

REQUERIMIENTOS DEL SISTEMA

Los requerimientos del sistema incluyen:

- Windows Vista
- Excel 2007 (versiones anteriores no son soportadas)
- 300MB de espacio libre en el disco duro
- 1GB de RAM mínimo
- Others: Otros: Microsoft .NET 3.5 Framework or later, VS Runtime, Microsoft Installer. El .NET 3.5 Framework es incluido en el archivo de instalación, donde el instalador primero chequea el sistema e identifica muchos requisitos faltantes (.NET 3.5 Framework or later, VS Runtime, y otros componentes) y automáticamente los instala antes de instalar el ROV EXTRACTOR Y EVALUATOR

PRUEBAS Y VERSIONES ACADÉMICAS

ROV Extractor y Evaluador puede ser bajado de la página web con una licencia de prueba de 10 días. Nuestra filosofía es que debe probar antes de comprar. Una vez lo pruebe, estamos seguros que le encantará su simplicidad y el poder de esta herramienta, y se convertirá en una parte indispensable de su herramienta de modelación. Sin embargo, tenga en cuenta que la versión de prueba solo puede crear licencias por 10 días y viene con mensajes para esta versión (esto desaparecerá para las versiones de licencia completa).

El ROV EXTRACTOR Y EVALUATOR le permite extraer el modelo en un archivo que corre completamente fuera de Excel (extraído en archivos EXP) donde todos los cálculos son protegidos. El Extractor y Evaluador ROV complementa el Compilador ROV de forma que un modelo grande que toma mucho tiempo correr en Excel ahora puede correrse a gran velocidad en el modelo EXP. Simulaciones de Riesgo Monte Carlo de gran escala pueden ser realizadas a altas velocidades.

Por favor usar el Compilador ROV si desea extraer el modelo en un archivo ejecutable (EXE) que corre en Excel pero todos sus cálculos son ocultados, protegidos y pueden ser autorizados. El software ROV Compilador complementa al Extractor y Evaluador y es fabricado por la misma compañía.

The screenshot shows the Microsoft Excel ribbon with the 'Risk Extractor' tab highlighted. Below the ribbon is a table titled 'Discounted Cash Flow / ROI Model'. The table includes columns for years 2009 through 2015, showing various financial metrics like Sum PV Net Benefits (\$4,762.09), Sum PV Investments (\$1,634.22), and Internal Rate of Return (55.68%).

The screenshot shows the 'Risk Simulator' application window. It displays a 'My Simulation 1' panel with a 'Simulation Result' section. The result table shows a random seed of 1378377745, 10000 trials, 4 CPUs, and strict synchronization set to true. It also notes "100,000 simulation trial run in under 3 seconds for a small size model! Detailed reports and statistics are provided". Below this is a 'Forecasts' section for 'Forecast 1' with a triangular distribution for 'Price A' (Minimum = 8, Mode = 10.25, Maximum = 11.55). The 'Other Inputs' section lists assumptions like 'Model!C13 = 50', 'Model!C13 = 12.25', etc. The 'Forecasts' section also includes a table for 'Forecast 1' with columns for Mean, Variance, Standard Deviation, Coefficient of Variation, and Percentiles (95th, 99th, 999th).

ROV BIZSTATS es una aplicación de herramientas estadísticas que se centra en la facilidad de manejo para los usuarios siendo en sí muy ponderosa ya que puede resolver la mayoría de problemas estadísticos cotidianos. Como complemento de Excel, este trabajará con sus datos existentes en sus hojas de cálculo. La Herramienta estadística para negocios la cual es un complemento en Excel, la cual resuelve sus necesidades diarias a nivel estadístico es muy fácil de utilizar con informes detallados (termina con resultados analíticos y explicaciones detalladas sobre los resultados).

Para los análisis estadísticos avanzados, por favor usar el Simulador de Riesgo para correr el Simulador del Modelo de Riesgo de Monte Carlo, Pronósticos Estocásticos, Optimización de Portafolio y otros Análisis Avanzados.

El ROV BizStats Software está dividido en 10 módulos analíticos:

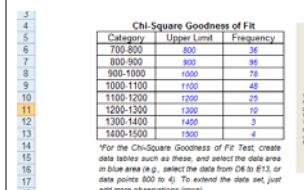

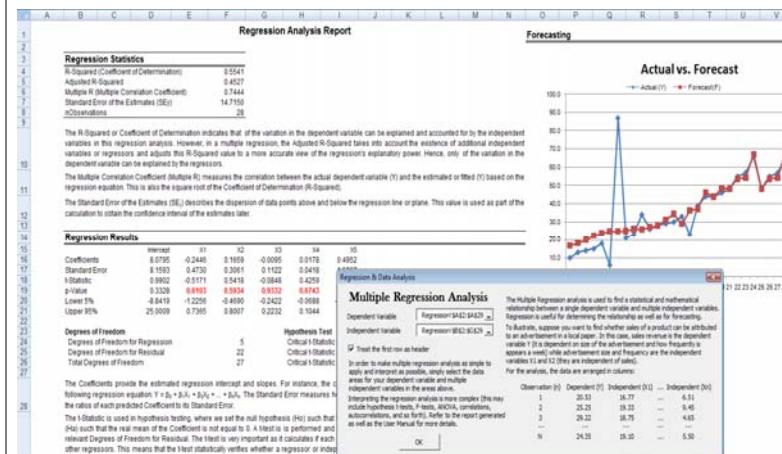

- **El Modelo Chooser** ayuda a elegir el tipo de análisis correcto dependiendo de los tipos de datos y el tipo de pruebas que usted está interesado en desarrollar, haciéndole una serie de preguntas en lenguas cotidianas de hoy en día.
- **Análisis de Varianza** (solo un factor ANOVA, tratamientos al azar de bloque múltiples, Anova de 2 vías) para probar las diferencias en conjuntos de datos estadísticamente similares o diferentes uno del otro, después de la contabilidad de ciertas variables de control.
- **Estadísticas Básicas** (Estadísticas Descriptivas, Matriz de Correlación, Matriz de Varianza-Covarianza) que analizan automáticamente los datos para usted y retorna la técnica estadística más utilizada.
- **Prueba de Hipótesis** (de Una o Dos Variables incluyendo la Prueba-t y la prueba-Z, para proporciones con variables dependientes e independientes) para probar si un conjunto de datos es estadísticamente similar o diferente a la hipótesis evaluada
- **Simulación Monte Carlo** (7 simples distribuciones de simulación. Usar el Simulador de Riesgo para las simulaciones más avanzadas)
- **Análisis No Paramétricos** (bondad de ajuste Chi-cuadrado y pruebas de independencia y varianzas, Prueba Friedman's, prueba de Kruskal-Wallis, Prueba Lilliefors, Runs test, Prueba Wilcoxon-Rank para Una o Dos variables)
- **Probabilidades** (Crea las tablas de probabilidad exacta de 18 tipos de distribución)
- **Previsiones Estocásticas** (salto de difusión, reversión-media y paseos aleatorios)
- **Análisis de Series de Tiempo** (ARIMA, Auto ARIMA y 8 modelos de descomposición de series de tiempo)
- **Análisis de Regresión** (Análisis de Regresión multivariada y análisis de componentes principales)

REQUERIMIENTOS DEL SISTEMA

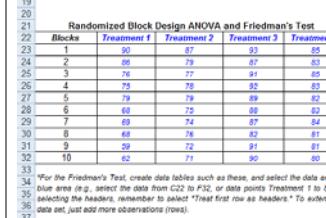

Windows XP o Vista y Excel XP, 2003 o 2007, con 30 Mb de espacio de disco duro y 512MB de RAM como mínimo. Trabaja en MAC con una Máquina Virtual o Paralela

VERSIÓN DE PRUEBA

La Versión de Prueba de este software está disponible bajo petición y está disponible en el sitio de descarga. La versión de prueba viene por defecto con una licencia de 10 días.

Sample Dataset for Nonparametric Tests I

Friedman Test (Randomized Block Design)

$$\frac{1-a}{\sigma^2} f_{a,\sigma^2}(\xi) = \frac{1}{\sqrt{2\pi}\sigma}$$

$$f(x, \theta) dx = M\left(T(\xi) \cdot \frac{\partial}{\partial \theta} \ln L(\xi, \theta)\right)$$

$$T(x) \cdot \left(\frac{\partial}{\partial \theta} \ln L(x, \theta) \right) \cdot f(x, \theta) dx = \int_{R_n} T(x) \left(\frac{\partial}{\partial \theta} \frac{f(x)}{f(x, \theta)} \right)$$

$$MT(\xi) = \frac{\partial}{\partial \theta} \int_{R_n} T(x) f(x, \theta) dx = \int_{R_n} \frac{\partial}{\partial \theta} T(x) f(x, \theta) dx$$

- ## ROV DASHBOARD 1.0
- Cree un grupo de reportes, diagramas y tablas que son altamente intuitivas, y protegidas por nombre de usuario y contraseña.
 - Cree la oportunidad de acceder desde cualquier parte del mundo para ver sus reportes que son constante y automáticamente actualizados.
 - Viene en múltiples lenguajes incluyendo Inglés, Chino, Español, Japonés, Portugués, Italiano, Francés, Alemán y Ruso.
 - Completamente compatible con ROV Risk Modeler
 - Separación de tareas y control con Administradores y Usuarios Regulares.
 - Gráficos y tablas altamente interactivos, incluyendo la habilidad de cambiar las tablas y gráficos de una lista de 25 gráficos.
 - Cree los escenarios para todos los reportes y datos una vez, y nuevos datos y resultados alimentaran los reportes automáticamente.

ROV DASHBOARD es una aplicación de software para empresas que puede ser instalada en un servidor con múltiples usuarios, y de igual forma como aplicación para un único computador de escritorio.

La edición para empresas o ROV Dashboard es muy simple de usar, donde el usuario, solo requiere visitar una pagina web interna e introducir un nombre de usuario y contraseña asignados por su administrador de redes. Todos los requerimientos técnicos son controlados por el administrador. Como usuario final, simplemente necesita la dirección de la página web y su propio nombre de usuario y contraseña en la página de registro. Esta información se la provee su administrador de redes.

Estos son algunas herramientas destacadas del sistema ROV Dashboard:

- Cree un grupo de reportes, diagramas y tablas que son altamente intuitivas, y protegidas por nombre de usuario y contraseña
- Cree la oportunidad de acceder desde cualquier parte del mundo para ver sus reportes que son constante y automáticamente actualizados
- Viene en múltiples lenguajes incluyendo Inglés, Chino, Español, Japonés, Portugués, Italiano, Francés, Alemán y Ruso
- Completamente compatible con ROV Risk Modeler donde los archivos XML de salida creados por ROV Modeler pueden ser leídos y actualizados en el ROV Dashboard.
- Cree los escenarios para todos los reportes y datos una vez, y nuevos datos y resultados alimentaran los reportes automáticamente.
- Gráficos y tablas altamente interactivos, incluyendo la habilidad de cambiar las tablas y gráficos de una lista de 25 gráficos
- Junto al ROV Modeler, ROV Dashboard provee una solución a los datos y necesidades de análisis de su empresa.
- Proveeremos consultoría y entrenamiento en analizar datos y necesidades de análisis de su empresa, implementándolos en Excel con la ayuda de ROV Risk Simulator y ROV Modeling Toolkit, y convertirlo en ROV Modeler para la implementación del software (enviaremos nuestro personal para configurar el servidor), y los ejecutivos de la firma solo accederán los reportes en el ROV Dashboard.
- Proceso simple e intuitivo de 4 pasos para crear reportes:
 - Fijar usuarios
 - Fijar la fuente de datos
 - Fijar reportes
 - Asignar reportes para usuarios específicos
- Dos tipos de usuarios pueden ser fijados: Administradores y usuarios regulares.
- Los Administradores pueden:
 - Crear nuevos usuarios, cambiar contraseñas y nombres de usuario
 - Crear nuevos reportes y asignar los reportes a distintos grupos y usuarios
 - Crear nuevos ítems como gráficos y tablas, y la ubicación de sus Fuentes de datos
- Usuarios Regulares pueden:
 - Ver reportes que están solo autorizados a ver y recibir
 - Actualizar ciertos gráficos y tablas en el reporte

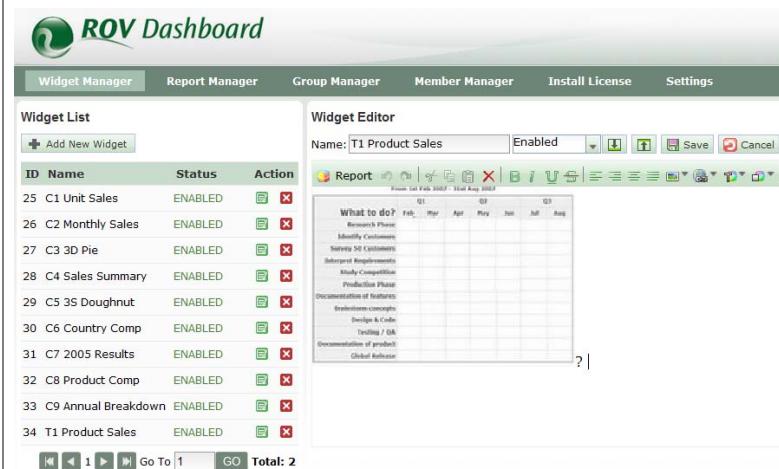

VERSIONES DE PRUEBA

No hay versiones de prueba para ROV Dashboard ya que esta herramienta requiere consultoría y entrenamiento antes de la implementación, y la implementación con un servidor, junto a las herramientas del ROV Modeler (el ROV Modeler es usado para bajar y vincular bases de datos y archivos de datos para realizar análisis avanzados en miles y millones de datos y devuelve los resultados en archivos XML que pueden ser leídos, actualizados y vistos en ROV Dashboard).

REQUISITOS DEL SISTEMA

ROV Dashboard es una aplicación Java Web basada en Tecnologías Hibernate, Spring, y Struts. Para la edición de escritorio, solo necesita Windows (XP y Vista, 32 y 64 bits), Linux, Unix, o Mac y un navegador de internet como Internet Explorer o Firefox.

Para la edición de empresa, corre con cualquier aplicación Java y soporta todos los sistemas de administración de datos (RDBMS). Puede ser instalado en Windows (XP y Vista, 32 y 64 bits), Linux, Unix, Mac, y soporta arquitecturas X86, X64, AMD64, y IA64. Soporta todos los RDBMS como MSSQL, Oracle, DB2, SYBASE, MySQL, etcétera. La interface del usuario final es la aplicación Web 2.0, usando Ajax, Flash, y XML. Finalmente, para servidores, realizamos la consulta inicial e implementación para su firma. La consulta incluye aplicar análisis ROV Modeler a los datos de su firma y el uso subsecuente de los resultados generados en ROV Dashboard.

ROV WEB MODELS (MODELOS WEB ROV) 1.0

- Sobre 800 funciones y modelos avanzados en la web.
- Nuestros modelos matemáticos pueden ser OEM en sus propios sistemas.
- Paginas web diseñadas para la necesidad de su negocio (podemos crear las paginas con los modelos que usted seleccione)
- Cálculos rápidos con resultados rápidos versus salidas detalladas de escenarios en tablas y gráficos.
- Todos los modelos matemáticos, financieros y analíticos han sido doblemente revisados por diferentes profesores y expertos en el tema.
- Completamente compatible con aplicaciones software de ROV Risk Simulator y ROV Modeling Toolkit
- Menos caro que una simple licencia de computador de escritorio con la posibilidad de múltiples usuarios en una única cuenta de usuario.
- Accesible desde cualquier parte del mundo sin la necesidad de tener grandes aplicaciones de software instaladas

ROV WEB MODELS es un conjunto de modelos y funciones accesibles en Internet usando Internet Explorer o Firefox.

Estas son algunas herramientas destacadas de ROV Web Models:

- Sobre 800 funciones y modelos avanzados disponibles en la Web.
- Modelos de planeación financiera con tablas y gráficos interactivos (seguros de vida, amortización de hipotecas, jubilaciones, ahorros universitarios, inversiones personales y mucho más) en la Web
- Podemos diseñar y crear modelos nuevos que cumplan sus necesidades y estos ser cargados en nuestra página o en nuestros sistemas propios.
- Nuestros modelos matemáticos pueden ser OEM en sus propios sistemas.
- Páginas web diseñables a las necesidades de su negocio (podemos crear las páginas con los modelos que usted seleccione)
- Cálculos y resultados rápidos versus salidas detalladas de escenarios en tablas y gráficas
- Todos los modelos matemáticos, financieros y analíticos han sido doblemente revisados por profesores y expertos en el tema.
- Completamente compatible con aplicaciones software ROV Risk Simulator y ROV Modeling Toolkit
- Menos caro que una simple licencia de computador de escritorio con múltiples usuarios en una única cuenta de acceso.
- Accesible en cualquier parte del mundo sin la necesidad de grandes aplicaciones de software instaladas.
- La lista detallada de nuestros 800 modelos avanzados está disponible para descarga con solicitud, y estos modelos son distribuidos en los siguientes grupos:

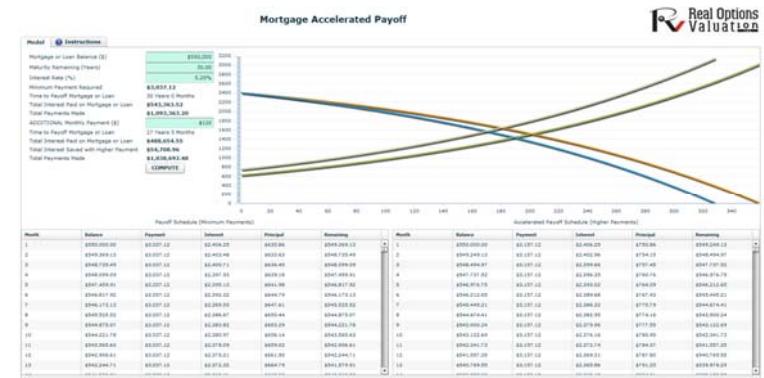

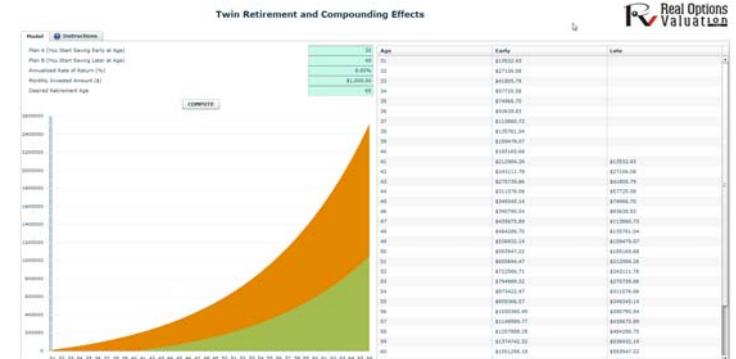

- Funciones Matemáticas Avanzadas
- Modelos Financieros Basicos
- Modelos de Opciones Basicas
- Matemáticas de Bonos, Opciones, Precios y Rendimientos
- Análisis de Riesgo Crediticio
- Probabilidad de Incumplimiento y paridad activos-patrimonio
- Delta Gamma Hedging
- Opciones exóticas y derivados
- Razones financieras
- Pronósticos de extrapolación e interpolación
- Análisis de inventarios
- Distribución de probabilidad CDF, ICDF, PDF
- Distribución de probabilidad de momentos teóricos
- Paridad put-call y opción de sensibilidad
- Modelos Queuing
- Modelos Six Sigma
- Valoración en riesgo, volatilidad, riesgo de portafolio y retornos
- Análisis de Opciones Reales

REQUISITOS DEL SISTEMA

Sólo necesita acceso a Internet y un navegador como Internet Explorer o Firefox. Nosotros manejaremos todos los requisitos en nuestros servidores.

VERSIONES DE PRUEBA

No hay versiones de prueba para este modelo Web.

Software-based Hands-on Seminarios y Cursos

Certificado en Dirección de Riesgo (CRM)

Certificación Senior Credit Risk Management (SCRM)

Risk Analysis Course

- Herramientas Analíticas
- Opciones Reales Básicas (SLS Software)
- Pronósticos (Simulador de Riesgo)
- Simulación de Monte Carlo (Simulador de Riesgo)
- Optimización (Simulador de Riesgo)

Real Options for Analysts

- Bases para Opciones Reales
- Entendiendo las bases del software SLS
- Enmarcar Opciones básicas

Real Options for Executives

- Las bases de Opciones Reales
- Decisiones estratégicas utilizando opciones reales
- Enmarcar opciones estratégicas
- Interpretar resultados de opciones

Valuing Employee Stock Options

- Aplicar redes binomiales en el ESO Toolkit para valorar opciones de empleados bajo el FAS 123 revisado del 2004

Seminario y Cursos Personalizados

- Cursos personalizados para las necesidades de su empresa

Sample companies that have been through our training seminars:

3M, Accenture, AIG, Allstate Insurance, Airbus, Alexion, Aquiva Trading, AT&T, Boeing, Chevron Texaco, Duke Energy, Eli Lilly, GE, GE Capital, Glaxo SmithKline, Intel, Johnson & Johnson, Lloyds Bank, Motorola, Phillips, Pioneer, Roche Molecular Diagnostics, Seagate, Schlumberger, Shell, Sprint, Sunoco, Syngenta, Timken, Total Elf Fina, Washington Gas, and many others!

Herramientas analíticas avanzadas como el software del simulador de riesgo son construidas para ser fáciles de usar pero pueden complicar al analista si son mal utilizadas. Suficiente entendimiento teórico junto a aplicación pragmática es vital; por lo tanto el entrenamiento es crítico. Ofrecemos muchos cursos y seminarios de entrenamiento en las áreas de análisis de riesgo, y análisis de opciones reales, dictado por expertos mundiales en estos temas. Nuestras clases generalmente cuentan con pocos participantes para así transmitir un mejor conocimiento por parte de los instructores. Los cursos son dictados en diferentes regiones a nivel mundial (buscar en la pagina web para el calendario), en salones equipados con computadores donde cada participante tendrá su terminal de computador.

Nuestro curso de **Análisis de Riesgo (Risk Analysis)** es un seminario de dos días enfocado en el entrenamiento de software, con temas cubriendo las bases de riesgo e incertidumbre, usando simulación de Monte Carlo, y todos los métodos detallados en proyección y optimización. Este curso de 2 días basado en simulador de riesgo cubre los siguientes temas:

- Simulación Monte Carlo (simulación, simulación no paramétrica bootstrap, simulación correlacionada cópula, truncado, ajuste de la distribución, estadísticas aplicadas para interpretar resultados de la simulación, pruebas de hipótesis, extracción de datos y análisis, simulación multidimensional, perfiles en simulación, y análisis de datos históricos.)
- Pronósticos (series de tiempo, regresión multivariante, extrapolación no lineal, procesos estocásticos, Box-Jenkins ARIMA, econometría básica, modelo GARCH, curvas logísticas, pronósticos sin datos, método DELPHI, modelación estacional y mucho mas!)
- Optimización (optimización lineal en decisión continua y discreta, optimización de portafolio, análisis de frontera eficiente, y técnicas de análisis de decisión)
- Modelando Análisis (análisis de situación, análisis de sensibilidad, análisis tornado y spider, simulación, gráficos y otros)
- Opciones Reales Básicas (casos simples y ejemplos de aplicaciones, entendiendo las bases de opciones reales)

También tenemos un curso para los **Analistas (Real Options for Analysts)** que quieren inmediatamente empezar a aplicar opciones estratégicas en su trabajo pero carecen de experiencia en análisis y modelación. Este curso de dos días cubre como montar modelos, aplicarlos, y resolver problemas usando simulación, utilizando de cerca las matemáticas y enrejados binomiales y multinomiales utilizando el SLS software.

Este es un curso de dos días usando el software SLS y cubre los siguientes temas:

- Introducción a opciones reales (qué, donde, quién, cuando, cómo y porqué)
- Casos aplicados en análisis de opciones reales
- Perspectiva de diferentes técnicas de valoración: modelos, ecuaciones parciales diferenciales, y enrejados binomiales.
- Aplicar la técnica de probabilidad neutral de riesgo, opciones europeas y americanas, abandono, expansión, contracción, opciones de elección, y 4 métodos de estimación de volatilidad
- Perspectiva de los diferentes módulos SLS y volatilidad informática.
- Solucionar opciones cambiando elementos de entrada y opciones exóticas personalizadas, complejas opciones secuenciales compuestas, mean-reverting options, jump-diffusion options, and dual-asset rainbow options usando enrejados trinomiales, quadrinomiales, y pentanomiales.
- Enmarcar opciones reales----estructurando el problema

Nuestro curso es diseñado especialmente para **Ejecutivos (Risk Analysis for Managers)** donde repasaremos casos de estudio en 3M, Airbus, Boeing, GE y muchos otros. Provee una visión ejecutiva del análisis de riesgo, opciones reales estratégicas, optimización de portafolio, pronósticos y conceptos de riesgo sin los detalles técnicos. Este seminario de 1 día es dirigido hacia ejecutivos, directores, y tomadores de decisión y cubre los siguientes tópicos:

- perspectiva de alto nivel sobre análisis de riesgo y opciones reales
- casos y aplicaciones reales en firmas multinacionales
- diseño de problemas en opciones estratégicas
- preguntas correctas sobre opciones estratégicas reales
- entender cómo interpretar los resultados

El seminario de **Certificado en Gestión de Riesgo (CRM, Certified in Risk Management)** es de 4 días y comprende los materiales de los cursos Risk Analysis y Real Options for Analyst enfocado hacia la certificación (CRM) proporcionada por el Instituto Internacional de Educación Profesional e Investigación. Al final del seminario de 4 días junto a los proyectos en clase y a un examen de certificación al final de las sesiones, usted recibirá su certificado CRM indicando su nueva credencial. Luego usted podrá recibir su designación CRM en cualquier documento.

El Instituto Internacional de Educación Profesional e Investigación es un instituto global con oficinas alrededor del mundo incluyendo Estados Unidos, Suiza, Hong Kong, México, Portugal, Singapur, Nigeria, Malasia, y otros. La certificación CRM es acreditada por la comisión nacional de certificación y IIPR es un miembro prestigioso de AACSB (Association for the Advancement of Collegiate Schools of Business). AACSB es una de las agencias acreditadoras más grandes de Estados Unidos, reconocida por el Departamento de Educación y tiene más de 500 escuelas de negocios alrededor del mundo como sus miembros. Ademas los seminarios de IIPR son aprobados por Project Management Institute (PMI) y los participantes obtienen 30 unidades profesionales de desarrollo (PDU) al completar el curso. IIPR comprende profesores de varias universidades incluyendo Lehigh University (Pennsylvania), University of Applied Sciences (Switzerland), Naval Postgraduate School (California), University of Missouri (Kansas City), y otras. También tiene alianzas estratégicas y colabora con varias instituciones de investigación a nivel global.

Seminarios Personalizados

Cualquiera de los seminarios puede ser adecuado a su firma. Las ventajas incluyen tener contenido específico para sus necesidades, casos y aplicaciones específicos para su industria, requerimientos inmediatos y discutir abiertamente datos modelos y estrategias bajo acuerdos de confidencialidad.

- Aprenda de expertos en el tema con las mejores credenciales y experiencia y no de entrenadores no calificados.
- El instructor principal del seminario es el creador del simulador de riesgo y el software SLS, el autor de 7 libros en temas de modelación de riesgo, opciones de riesgo y valoración. También es profesor en economía y finanzas, consultor de muchas multinacionales, y es conocido globalmente por su experiencia en análisis de riesgo y opciones reales.
- Obtenga libros gratis, modelo y ejemplos de entrenamiento, videos, diapositivas y muchos otros materiales.

CONOCIMIENTOS TECNICOS

Dr. Johnathan Mun es el creador del Software y enseña Análisis de Riesgo, Análisis de Opciones Reales, Análisis de Riesgo para Gerentes, CRM, y otros cursos. Ha sido Consultor de muchas firmas que están en la lista Fortune 500 (3M, Airbus, Boeing, GE y Motorola) y para el gobierno (Departamento de Defensa, Agencias Estatales y Federales) en Análisis de Riesgo, Valoración y Opciones Reales. Ha escrito muchos libros en temas de: Análisis de Opciones Reales: Técnicas y Herramientas, Primera y Segunda Edición (Wiley Finance, 2005, 2002); Curso de Análisis Opciones Reales: Casos de Negocios (Wiley Finance, 2003); Análisis de Riesgo Aplicada: Mas allá de la Incertidumbre en los Negocios (Wiley, 2003); Valoración de Opciones de Acciones para los Empleados en Virtud 2004 FAS 123 (Wiley Finance, 2004); Modelando Riesgo: Aplicación Simulación Monte Carlo, Análisis de Opciones Reales, Pronostico y Optimización (Wiley 2006); Modelos Analíticos Avanzados: 800 Funciones y 300 Modelos de Basilea II a Wall Street y mas Allá (Wiley 2008); The Banker's Hand Book on Credit Risk: Implantación de Basilea II (Elsevier Academic Press 2008); y otros. Es el Fundador y Director General en Valoración de Opciones Reales, Inc., y es el responsable del desarrollo de análisis de productos de Software, consultoría y entrenamiento en servicios. Fue Vicepresidente de Analytics at Decisioneering, Inc. (Oracle), y fue Gerente de Consultoría en KPMG's Global Financial Startegies. Antes de KPMG, fue jefe de pronóstico financiar para Vikings, Inc. (FDX/FedEx Company). Dr Mun es también catedrático en U.S. Naval Postgraduate School y Catedrático en la University of Applied Science and Swiss School of Management (Zúrich and Frankfurt), y se ha encargado de otras cátedras en varias universidades. Tiene un PH.D en Finanzas y Economía, un MBA en Administración de Empresas, M.S. en Gestión de Ciencia, y BS en Licenciatura en Ciencias Aplicadas. El esta certificado en Gestión de Riesgo Financiero (GRF), Certificado en Consultoría Financiera (CCF) y Certificado en Manejo de Riesgo (CRM).

CERTIFIED IN RISK MANAGEMENT

"El Dr. Johnathan Mun es un instructor brillante y enérgico capaz de poder tomar los temas más difíciles y hacerlos comprensibles y prácticos. Sin duda el mejor instructor que he tenido durante mucho tiempo."

-Curtis Ching, Director de Desarrollo de Negocios en Finanzas, GE Money

"Dr. Mun está en condiciones de tomar los más difíciles y desafiantes conceptos y hacerlos más fácil de entender aplicándolos a los retos de hoy en día y a los constantes cambios en los entornos empresariales. Definitivamente es uno de los mejores seminarios a los cuales he asistido y lo catalogo como el mejor profesor en el campo." -Robert Finocchiaro, Ph.D., Director Corporativo de Servicios R&D, The 3M Company

Asistir a uno de nuestros seminarios intensivos sobre Análisis de Riesgo Integrado por 4 días, Completar el requisito de trabajo en clase y obtendrá el Certificado en Manejo del Riesgo (CRM), Ofrecido por el Instituto Internacional de Educación Profesional e Investigación

"Nunca antes había visto un entrenador tan capaz!" Hussein Alghamdi, Grupo Savola, Arabia Saudita
"Excelente instructor con talleres y ejemplos prácticos." Y.L. Lee, Ingeniero Industrial, Seagate Technology
"Muy buena Formación (entrenamiento) con ejemplos prácticos." Aprianto Sommantri, Ingeniero, Chevron Texaco

"Dr. Johnathan Mun ha sido capaz de juntar tanto la aproximación al aprendizaje y los materiales de enseñanza para que cambiemos nuestro esquema cognitivo y logremos digerir de una forma más fácil el manejo del riesgo. Como el futuro de los negocios está centrado en la vigilancia de la toma de decisiones, el enfoque que utiliza el Dr. Mun es de lejos uno de los mecanismos más efectivos en la sostenibilidad corporativa."

Kenneth English, Director de Tecnologías Emergentes, The Timken Company

"Dr. Mun tiene la capacidad de tomar el cohete de la ciencia y de traer materias complicadas a la tierra de manera memorable. De una forma simple usted sale de las secciones habiendo aprendido mucho y empezando a ponerlo en práctica inmediatamente."

Robert Fourt, Partner, Gerald Eve Consulting (UK)

Real Options Valuation, Inc. es el proveedor mundial preferido por el Instituto Internacional de Educación Profesional y Investigación (IIEPI) y se han concedido los derechos de CRM para enseñar cursos de certificación. Después de completar nuestro seminario de 4 días y presente con éxito un examen administrado en vivo el ultimo día, los participantes tendrán la designación de CRM!!, Real Options Valuation, Inc, es una de las 3 organizaciones en el mundo con derecho de conceder esta designación (CRM). Entonces, Como comparar nuestro seminario con otros? Sorprendentemente, nuestro seminario de formación de 4 días es más barato que otros, llamados cursos de simulación, al completar nuestro curso de entrenamiento, usted recibirá la designación en CRM, certificación que otras firmas pueden otorgar. Además la formación estará dirigida por un exclusivo entrenador en CRM, el Dr. Johnathan Mun, Fundador y Director General en Real Options Valuation, Inc.; un profesor y experto de renombre internacional en Análisis de Riesgo; autor de 8 libros en temas de riesgo, valoración y estrategia; así como promotor del Simulador de Riesgo y Real Options SLS Software. Compare esto a ser entrenado por alguien recién graduado y con menos de 2 años de experiencia en el campo empresarial, o por un MBA con una insuficiente formación en la teoría y práctica en el Análisis de Riesgo. Usted no solo aprenderá las aplicaciones prácticas de análisis de riesgo, sino también las bases teóricas de estas aplicaciones.

VENTAJAS

Las Principales Ventajas de asistir a uno de nuestros seminarios son las siguientes:

- Obtener el Certificado de Manejo de Riesgo (CRM).
- Aprender de Expertos reales en este campo, con las mejores credenciales y mucha experiencia, y no de un grupo de maestros incompetentes.
- Obtener todo de la fuente!! El principal instructor del seminario es el creador de el simulador de riesgo y el software REAL OPTION SUPER LATTICE SOLVER (SLS), autor de 8 libros en temas de modelación de riesgo, opciones reales y Valoración. También es profesor de Economía y Finanzas, consultor de varias multinacionales y es conocido a nivel mundial por su experiencia en Análisis de Riesgo y opciones reales.
- Obtén libros Gratis, ejemplos y modelos de formación, videos, diapositivas y muchos otros materiales para empezar.

El Instituto Internacional de Educación Profesional e Investigación (IIPER) es una institución mundial con aliados y oficinas alrededor del mundo incluyendo los Estados Unidos, Suiza, Hong Kong, Mexico, Portugal, Singapur, Nigeria, Malasia y otros. IIPER CRM es la certificación acreditada por la Comision Nacional de Certificacion y el IIEPI es un miembro prestigioso de la AACSB (Association for the Advancement of Collegiate Schools of Business).

AACSB es uno de las agencias más grandes acreditadas en Estados Unidos y reconocida por el Departamento de Educación de Estados Unidos, y tiene alrededor de 500 escuelas de negocios alrededor del mundo. Además, Los seminarios por el IIEPI son aprobados por el Instituto de Gestión de Proyectos (IGP) y los participantes también pueden obtener 30 unidades de desarrollo profesional (PDU) al finalizar el curso. La Junta de Normas Internacionales del IIEPI comprende profesores de varias universidades incluyendo Lehigh University (Pennsilvania), Universidad de Ciencias Aplicadas (Suiza), Naval Postgraduate School (California), University Of Missouri (Kansas City) y otras. El IIPER también tiene alianzas estratégicas y colaboraciones con varias instituciones de investigación a nivel mundial.

TEMAS DEL SEMINARIO DE CRM

Modulo 1: Introducción al Análisis de Riesgo

- Capítulo 1: Introducción a la Capacitación y qué esperar de este.
 Capítulo 2: Cómo Son Tomadas las Decisiones Empresariales?
 Capítulo 3: Qué es el Riesgo y Porqué Debe Ser Considerado el Riesgo
 Capítulo 4: Listado de Aplicaciones sobre Análisis de Riesgo

Modulo 2: Simulación Monte Carlo Con Simulación de Riesgo

- Capítulo 1: Listado de Software sobre el Simulador de Riesgo
 Capítulo 2: Perfiles, Supuestos, Previsiones y Simulaciones
 Capítulo 3: Interpretación sobre Pronósticos Estadísticos
 Capítulo 4: Preferencias de Ejecución y Valores Semilla
 Capítulo 5: Ejecución de Informes, Almacenamiento y Extracción de simulación

Modulo 3: Técnicas Avanzadas de Simulación

- Capítulo 1: Correlación y Distribución Truncada
 Capítulo 2: Parámetros Alternos
 Capítulo 3: Simulaciones Multidimensionales
 Capítulo 4: Ajuste de la distribución
 Capítulo 5: Análisis de datos Históricos y dificultades en la Simulación

Modulo 4: Herramientas de Análisis y Simulación

- Capítulo 1: Graficos Tornado y Spider
 Capítulo 2: Análisis Dinámico de Sensibilidad y análisis de Escenarios
 Capítulo 3: Prueba de Hipótesis sobre Distribuciones
 Capítulo 4: Simulación No Paramétrica Bootstrap

Modulo 5: Optimización en Simulador de Riesgo

- Capítulo1: Introducción a la Optimización
 Capítulo 2: Optimización Continua
 Capítulo 3: Optimización Entera

Modulo 6: Pronóstico

- Capítulo 1: Descripción General de las Técnicas de Pronóstico y de los Tipos de Datos
 Capítulo 2: Pronóstico sin Datos
 Capítulo 3: Pronóstico y Análisis de Series de Tiempo
 Capítulo 4: Extrapolación No Lineal
 Capítulo 5: Análisis Multivariado Lineal y Análisis de Regresiones No Lineales
 Capítulo 6: Procesos Estocásticos
 Capítulo 7: Pronósticos Avanzados: Box-Jenkins ARIMA y Auto ARIMA, GARCH, J-Curve, S-Curves, Markov Chains, Diagnóstico de Datos, Propiedades Estadísticas, Econometría Básica

Modulo 7: Análisis de Opciones Reales: Teoría y Antecedentes

- Capítulo 1: Opciones Reales: Que, Donde, Quien, Cuando, Como y Por qué?
 Capítulo 2: Casos Aplicados a los Negocios
 Capítulo 3: Descripción de las Diferentes Técnicas de Valoración de las Opciones
 Capítulo 4: Técnicas de Probabilidad del Riesgo Neutral
 Capítulo 5: Resolviendo Opciones Europeas Básicas y Americanas de tipo Call
 Capítulo 6: Usando Excel para Resolver Opciones Call Americanas y Europeanas
 Capítulo 7: Opciones de Abandono, Expansión, Contracción y Selección

Modulo 8: Análisis de Opciones Reales: Aplicación al Programa SLS

- Capítulo 1: Visión General de los Diferentes Módulos SLS y Estimación de Volatilidad
 Capítulo 2: La Estimación de Volatilidad
 Capítulo 3: Cambios en Opciones con Entradas Personalizadas y Opciones Exóticas
 Capítulo 4: MSLs: Múltiples Opciones Compuestas Secuenciales
 Capítulo 5: MNLS: Solución de procesos con Reversión a la Media, Salto de Difusión y Opciones Arco Iris de doble activo usando utilizando enrejados Trinomiales, Quadronomiales y Pentanomiales
 Capítulo 6: Elaboración de Opciones Reales --- Estructura del Problema
 Capítulo 7: Los Siguientes Pasos...

CONOCIMIENTOS TECNICOS

Dr. Johnathan Mun es el creador del Software y enseña Análisis de Riesgo, Análisis de Opciones Reales, Análisis de Riesgo para Gerentes, CRM, y otros cursos. Ha sido Consultor de muchas firmas que están en la lista Fortune 500 (3M, Airbus, Boeing, GE y Motorola) y para el gobierno (Departamento de Defensa, Agencias Estatales y Federales) en Análisis de Riesgo, Valoración y Opciones Reales. Ha escrito muchos libros en temas de: Análisis de Opciones Reales: Técnicas y Herramientas, Primera y Segunda Edición (Wiley Finance, 2005, 2002); Curso de Análisis Opciones Reales: Casos de Negocios (Wiley Finance, 2003); Análisis de Riesgo Aplicada: Mas allá de la Incertidumbre en los Negocios (Wiley, 2003); Valoración de Opciones de Acciones para los Empleados en Virtud 2004 FAS 123 (Wiley Finance, 2004); Modelando Riesgo: Aplicación Simulación Monte Carlo, Análisis de Opciones Reales, Pronóstico y Optimización (Wiley 2006); Modelos Analíticos Avanzados: 800 Funciones y 300 Modelos de Basilea II a Wall Street y mas Allá (Wiley 2008); The Banker's Hand Book on Credit Risk: Implementación de Basilea II (Elsevier Academic Press 2008); y otros. Es el Fundador y Director General en Valoración de Opciones Reales, Inc., y es el responsable del desarrollo de análisis de productos de Software, consultoría y entrenamiento en servicios. Fue Vicepresidente de Analytics at Decisioneering, Inc. (Oracle), y fue Gerente de Consultoría en KPMG's Global Financial Startegies. Antes de KPMG, fue jefe de pronóstico financiar para Vikings, Inc. (FDX/FedEx Company). Dr Mun es también catedrático en U.S. Naval Postgraduate School y Catedrático en la University of Applied Science and Swiss School of Management (Zúrich and Frankfurt), y se ha encargado de otras cátedras en varias universidades. Tiene un PH.D en Finanzas y Economía, un MBA en Administración de Empresas, M.S. en Gestión de Ciencia, y BS en Licenciatura en Ciencias Aplicadas. El esta certificado en Gestión de Riesgo Financiero (GRF), Certificado en Consultoría Financiera (CCF) y Certificado en Manejo de Riesgo (CRM).

REFERENCIAS DE LOS CLIENTES

Compañías que han pasado por nuestros seminarios de entrenamiento o han obtenido nuestro software y servicios de consultoría:
3M, Accenture, AIG, Allstate Insurance, Airbus, Alexion, Aquiva Training, AT&T, Boeing, Chevron Texaco, Duke Energy, Eli Lilly, GE, GE Capital, Glaxo SmithKline, Goodyear, Halliburton, Intel, Johnson & Johnson, Lloyds Bank, Motorola, Phillips, Pioneer, Roche Molecular Diagnostics, Seagate, Schlumberger, Shell, Sprint, Sunoco, Syngenta, Timken, Total Elf Fina, Washington Gas, y muchas otras!

SOBRE EL ENTRENAMIENTO Y SEMINARIOS:

GE (La corporación más grande del mundo):

“El Dr. Johnathan Mun es un instructor brillante y energético, capaz de tratar los temas más complicados y volverlos entendibles y prácticos. Sin duda el mejor instructor que he tenido en un largo tiempo.”

-Curtis Ching, Director de Desarrollo de Negocios y Finanzas, GE, GE Money (Asia).

3M (La firma más creativa en el mundo):

“Johnathan Mun es capaz de tomar hasta los conceptos técnicamente más complicados, y volverlos simples de entender y aplicables al cambiante mundo de los negocios actuales. Es definitivamente uno de los mejores seminarios al que he asistido, y calificaría al Dr. Mun como uno de los principales conocedores de este campo.”

-Robert Finocchiaro, Ph. D, Director de Servicios Corporativos R&D, The 3M Company, (USA)

Departamento de Defensa EE.UU. (El Empleador más grande del mundo) :

“Gran presentación! Muy buena sesión con la mejor discusión costo/opción/riesgo/ que he visto. Debe ser un requisito para cada promoción nueva de almirantes de la Armada. Esta sesión fue increíble. Gran expositor, nos tuvo interesados todo el tiempo. El describió y presentó una serie de herramientas para que un líder las utilice para tomar las mejores decisiones. El Dr. Mun fue muy animado y entusiasta. Ejemplos de la vida real ayudaron significativamente al entendimiento. Exige a la audiencia que piense. Muy buenos ejemplos reales fueron incluidos. Simplemente sobresaliente! **-Una recopilación de citas de Comandantes y Capitanes de la Armada en la Escuela Naval de Postgrados (USA)**

The Timken Company (La Corporación mas caritativa):

“El Dr. Johnathan Mun ha sido capaz de poner juntos los materiales de aprendizaje y enseñanza que cambian nuestro esquema del conocimiento en como manejamos el riesgo de una forma digerible. Como el futuro de los negocios esta enfocado en la toma de decisiones, la aproximación que utiliza el Dr. Munn es de lejos uno de los mecanismos más efectivos para el soporte corporativo sostenible.” **Kenneth English, Director de Tecnologías Emergentes, The Timken Company (USA)**

Gerald Eve (Firma Consultora del sector real en el Reino Unido):

“Mun tiene la habilidad de tomar el cohete fuera de la ciencia y aterrizar temas de una manera memorable. De una forma simple usted sale de las sesiones no sólo habiendo aprendido mucho, sino empezando a ponerlo en práctica inmediatamente.”

-Robert Fourt, Socio, Gerald Eve Consultora (UK)

“Dr. Johnathan Mun es uno de los profesores más talentosos en análisis cuantitativo de riesgo en la historia de las finanzas y los negocios. Todos sus libros combinan ciencias, arte, intuición, creatividad, y por encima de todo, plenamente perceptivos, siempre prácticos, proveen claridad sorprendente, en los métodos y caminos apropiados en la toma de decisiones, al enfrentarse a la incertidumbre. Su herramienta de software contiene un vasto tesoro de cerca de 600 modelos, algo jamás creado en este campo. La aplicación práctica de los modelos de riesgo en sus libros, software, y lecturas nos tendrán ocupados por muchos años!”

-Brian Watt, Jefe Oficial de Riesgo y CFO, GECC (USA)

“El uso de ejemplos reales para ilustrar conceptos fue genial. Mun tiene un conocimiento profundo en la materia y fue capaz de impartir el conocimiento a los participantes.”

-Tim Mull, Capitán de la Armada, Departamento de Defensa (USA)

“La profundidad y conocimiento del instructor y la habilidad para aprender de la práctica fue increíble.”

-Debra Gordon, Analista de Crédito, National Bank of Dominica (Caribbean)

“Los materiales técnicos fueron fáciles de entender por las excelentes explicaciones y ejemplos.”

-Mark Rhoades, Profesor, Universidad Naval (USA)

“Una excelente entrega de una materia compleja. Dr. Mun tuvo a la clase entera comprometida todo el tiempo.”

-Lou Owayni, Director de Proyectos, Adaptec (USA)

“Muy relevante para mi trabajo, con un amplio tema, y un gran estilo de presentación.”

-Chris Law, Director de Servicios de Proyecto, Genentech (USA)

“Excelente conocimiento adquirido.”

-Vitorio Stana, Director de Calidad, Industrias Avcorp (Canada)

“Explicación clara del tema, entusiasmo, y accesibilidad del Dr. Mun.”

-Andrew Putney, Grupo de Consultoría Maxiom (USA)

“El conocimiento y entusiasmo por la materia de Johnathan, y la habilidad de proveer ejemplos realísticos que son aplicables lo hicieron un seminario increíble.” **-Kristi Novinger, Senior IT Project Manager, APL Limited (USA)**

“El conocimiento del Dr. Mun fue fantástico y su entusiasmo fue alto y contagioso. Realmente disfruté el tema.”

-Brian Suter, Analista de Proyectos, Wells Fargo (USA)

SOBRE LIBROS, METODOLOGÍA, Y ANÁLISIS

Airbus (La constructora de Aviones más grande del mundo localizada en Francia):

Johnathan Mun había publicado previamente un número de libros muy populares que trataban sobre diferentes aspectos del análisis de riesgo, técnicas asociadas y herramientas. Esta última publicación pone todos los pedazos juntos. El libro es realmente inevitable para cualquier profesional que quiera tratar la evaluación del riesgo siguiendo una aproximación lógica, concreta, y concluyente."

-Jean Louis Vaysse, Vicepresidente, Airbus (Francia)

Seagate (Una de las fabricantes de discos duros más grande del mundo):

"Lectura obligada para directores de portafolio....captura la exposición al riesgo de inversiones estratégicas, y provee gestión con estimaciones de resultados posibles y mitigación de riesgo" -Rafael E. Gutierrez, Director Ejecutivo de Marketing Estratégico, Seagate Technology (USA)

GEMPLUS (Constructores de memorias y tarjetas inteligentes en Francia):

"Desmitifica el análisis de las opciones reales y entrega una poderosa guía pragmática para tomadores de decisiones y similares. Finalmente hay un libro que equipa a los profesionales a fácilmente reconocer, valorar y aprovechar opciones reales en su mundo alrededor." -Jim Schreckengast, Vicepresidente, R&D Strategy, Gemplus International SA, (Francia)

MONITOR GROUP (firma consultora):

"Este libro se debe tener y leer, una refrescante visión de los procesos de toma de decisiones...a menudo no puedes decir sinceramente que un libro rompe nuevos esquemas, pero este claramente lo ha hecho."

-Glenn Kautt, CEO, Monitor Group, Inc. (USA)

WHARTON (una de las mejores escuelas de negocios):

"Real Option Analysis es el libro de opciones reales más claro que hasta ahora hemos leído. Hace un trabajo excelente de desmitificar un tema difícil y complejo. Provee una base sólida para concebir y evaluar opciones reales de inversión, lo que lo hará útil para los estudiantes."

-Ian MacMillan, Ph.D., Fred Sullivan Professor of Entrepreneurship, Wharton School, Universidad de Pennsylvania (USA)

KOZO (desarrollador premier en Japón):

"Muchos libros en opciones reales pueden ser intimidadores. Mun ofrece una guía pragmática, fiable, y entretenida. Fórmulas y conceptos complejos son explicados brillantemente con ejemplos de varias industrias."

-Shota Hattori, Presidente y CEO, Kozo Keikaku, Inc. (Japan)

GARTNER GROUP (grupo de consultoría y publicación):

"La estrategia de desarrollo ha caído en tiempos difíciles en los que se juzgan como no relevantes para un mundo que cambia rápido. Con este libro, ataca esta excusa pobre presentando una metodología claramente organizada y soportada que progresó lógicamente a la construcción de estrategias de negocio reales."

-Robert Mack, Vicepresidente, Gartner Group (USA)

"Finalmente un libro técnicamente sofisticado, suficientemente útil y escrito para que pueda ser usado. Destinado a convertirse en el manual de opciones reales."

-Tracy Gomes, Presidente, Intellectual Property Economics, (USA)

"Escrito desde el punto de vista de un educador, este libro ofrece una referencia posible de leer, llena de herramientas de decisión para satisfacer tanto novatos como veteranos."

-Richard Kish, Ph.D., Profesor de Finanzas, Lehigh University (USA)

"Mun ha convertido su tácito conocimiento financiero en un libro digerible y amigable. Efectivamente guía al lector por un camino empezando en el descuento de flujo de efectivo, pasando por Análisis de Monte Carlo, llegando a opciones reales, para luego acercarse más al objetivo de alcanzar decisiones corporativas confidenciales. Su habilidad para explicar claramente las relaciones de métodos de análisis populares, hará de este un libro de referencia obligado para tomadores de decisiones."

-Kenneth English, Director de R&D, The Timken Company (USA)

"El libro debe ser leído por cualquiera interesado en los análisis de opciones reales. Mun ha hecho el tema claro como un cristal, y exponencialmente fácil de entender. Simulación de Monte Carlo y el software en opciones reales, simplemente valen más que el precio del libro." -Morton Glantz, Profesor de Finanzas, autor de libros, asesor financiero del gobierno y entidades privadas (USA)

"Mun provee una guía paso a paso de las simulaciones y el análisis, invaluable para nosotros quienes estamos insatisfechos con valoraciones convencionales."

-Fred Kohli, Head of Portfolio Management, Syngenta Ltd. (Suiza)

"Muchos de nosotros llegamos con la perspectiva desde nuestra propia destreza. Su capacidad hace que el libro sea entendible, relevante y por lo tanto aplicable inmediatamente."

-Robert Fourt, Socio, Gerald Eve, (Reino Unido)

"Es una joya resplandeciente en mi biblioteca de finanzas. Demuestra un conocimiento profundo de la teoría matemática en su capacidad de reducir conceptos complejos, a explicaciones y ejemplos lúdicos. Por esta razón es mi autor preferido en este campo. Profesionales con experiencia apreciarán la competencia para convertir matemática compleja en una presentación clara de soluciones a riesgo financiero, finanzas corporativas, y pronósticos." -Janet Tavakoli, CEO, Tavakoli Structured Finance

"Todos los años el mercado es inundado con libros y libros. Este es diferente. Pone una herramienta valorable en las manos de directores corporativos que desean levantarse frente a incertidumbres y riesgos y están determinados de crear valor a sus accionistas. Es un libro para la nueva generación de directores, a los que Corporate America está esperando."

-Dr. Markus Junginger, Managing Partner, IBCOL Consulting, (Suiza)

"Presenta paso a paso a los lectores una aproximación reveladora de cómo los métodos y las herramientas cuantitativas marcan diferencia. Te enseña que es relevante. Yo recomiendo este libro, especialmente si quieres incorporar las últimas tecnologías en tu toma de decisiones para tu negocio."

- Dr. Paul W. Finnegan, MD, MBA, Vicepresidente, Operaciones Comerciales y Desarrollo, Alexion Pharmaceuticals, Inc.

"Dr. Mun tiene la increíble habilidad de clarificar lo complejo, desmenuzando conceptos de análisis de riesgo en una guía entendible y práctica para tomadores de decisiones. Este libro traza un camino que conecta teorías abstractas con aplicaciones y ejemplos reales dejando al lector ilustrado." -Stephen Hoye, CEO, Hoye Consulting

"Este libro es un placer de leer no sólo para los expertos en el tema sino para los novatos. Tiene un alto riesgo de adicción para sus lectores. Guía a los lectores paso a paso por complejos conceptos matemáticos con facilidad y claridad. Ejemplos e indicadores bien escogidos, complementan los buenos capítulos. Este libro va a ser un best-seller en Dirección de Riesgo y es obligatorio para todos los profesionales."

-Dr. Hans Weber, Syngenta AG (Suiza)

"Su nuevo libro provee la mejor y más comprensible guía para valorar decisiones estratégicas, tanto en el escenario corporativo como en la evaluación de decisiones militares estratégicas. Este libro es un clásico instantáneo y debe ser leído por cualquiera que deba tomar decisiones y hacer análisis de riesgo. La segunda versión es más versátil pues expande su alcance y cubrimiento mientras que continúa con el standard de excelencia de la primera edición. Es el libro más práctico y teórico que he leído en la materia." -Tom Housel, Ph.D., Profesor en Ciencias de Información, Escuela de Posgrados de la Armada, Departamento de Defensa, Monterey (USA)

"La claridad y el cubrimiento lo hace una de las mejores guías junto a las herramientas financieras en CD-ROM."

-Michael Sim, Partner, Moores Rowland International (Hong Kong)

"Una vez más el Dr. Johnathan Mun ha alcanzado su standard usual: excelencia en complicadas técnicas analíticas y cuantitativas que permiten al lector acceso aunque no tengan entrenamiento ingeniero o científico. Este libro presenta una seria guía para quienes usan todos los días modelos, particularmente aquellos interesados en Análisis de Riesgo y Dirección, o en como ir mas allá en cuanto a análisis estadístico simple. Es obligación tenerlo para académicos buscando bibliografía amigable, y para estudiantes que deseen tener una primera experiencia en herramientas analíticas altamente productivas." -Dr. Roberto J. Santillan-Salgado, Director del M.S., EGADE-ITESM, Campus Monterrey, (Mexico)

"Su último libro es una extensión lógica de la teoría y aplicación presentada en Real Options Analysis. Más específicamente, The Real Options Analysis Course, presenta numerosos ejemplos y provee al lector soluciones paso a paso. Después de leer el libro, los lectores entenderán mejor la teoría y las oportunidades de aplicación en decisiones corporativas."

-Chris D. Treharne, M.B.A., A.S.A., M.C.B.A., Presidente Gibraltar Business Appraisals, Inc. (USA)

"Este texto provee un excelente seguimiento al primer libro, Real Options Analysis. Los casos en el curso dan numerosos ejemplos en como el software puede asistir en la valoración de flexibilidad de gestión y estratégica, con muchos ejemplos prácticos y útiles." -Charles T. Hardy, Ph.D., M.B.A., Chief Financial Officer & Director of Business Development, Panorama Research, Inc. (USA)

"Mun claramente se ha Ganado la reputación en ser un experto en la materia....asesores, analistas, e ingenieros se volcarán todos sobre este libro y su software."

-Phyllis Koessler, Managing Director, Koessler and Associates (Suiza)

BIBLIOGRAFIA DEL FUNDADOR

DR. JOHNATHAN MUN, Ph.D., MS, MBA, BS, CRM, CRA, FRM, CFC, MIFC

Dr. Johnathan C. Mun es el fundador, presidente y CEO de Real Options Valuation Inc. (ROV), una empresa consultora, entrenadora y desarrolladora de software especializada en opciones estratégicas reales, evaluación financiera, simulación de Monte Carlo, pronósticos estocásticos, optimización, y análisis de riesgo localizada en Silicon Valley, California. ROV tiene socios en California, Nueva York, Chicago, México, Chile, Suiza, Australia, Japón, y una filial local en Shanghai, China. También es el presidente del Instituto Internacional de Educación Profesional e Investigación (IIPER), una acreditada organización global que provee el Certificado en Gestión de Riesgo (CRM), integrado por profesores de distintas universidades de renombre en el mundo. También es el creador del software Modeling Toolkit, Real Options Super Lattice Solver software, Risk Simulator software, y Employee Stock Options Valuation software, así como el DVD de entrenamiento en análisis de riesgo, y dicta seminarios públicos en análisis de riesgo y Certificados en Gestión de Riesgo (CRM). Es el autor de diez libros incluyendo el manual BASILEA II en Riesgo de Crédito y Mercado (Elsevier 2008), y Modelos Analíticos Avanzados : 800 aplicaciones de Basel II a Wall Street (Wiley 2008), Modelando Riesgo: Aplicando Simulación Monte Carlo, Opciones Reales, Optimización y Pronósticos, (Wiley 2006), Análisis Opciones Reales: Herramientas y Técnicas, primera y segunda edición (Wiley 2003 y 2005), Curso en análisis de Opciones Reales: Casos de Negocios (Wiley 2003), Análisis Aplicado de Riesgo: Moviéndose en la Incertidumbre (Wiley 2003), Valorando Acciones (Wiley 2004), y otros. Sus libros y software son usados en distintas universidades alrededor del mundo incluyendo el Instituto Bern en Alemania, Universidad Chung-Ang en Corea del Sur, Universidad Georgetown, ITESM en México, Instituto de Tecnología de Massachusetts, Escuela Naval de Postgrados, Universidad de Nueva York, Universidad de Estocolmo en Suecia, Universidad de Los Andes en Chile, Universidad de Pennsylvania, Universidad de York en el Reino Unido, y la Universidad de Edimburgo en Escocia entre otras.

Actualmente también es profesor de Finanzas y Economía y ha dictado cursos en Dirección Financiera, Inversiones, Opciones Reales, Economía, y Estadística en pregrado y postgrado. Ha enseñado en universidades alrededor del mundo, desde la Escuela Naval de Postgrados (Monterrey, California), Universidad de Ciencias Aplicadas (Alemania y Suiza), hasta Universidad Golden Gate (California), y St. Mary's (California), y ha presidido muchas tesis. También ha enseñado análisis de riesgo, análisis de opciones reales, y análisis de riesgo para directores en cursos públicos donde los participantes pueden obtener el certificado en Dirección de Riesgo una vez cumplan las horas completas del programa. También mantiene la posición del Presidente de la Academia Americana de Dirección Financiera y participa en el concejo global AAFM. Era el Vicepresidente de análisis en Decisioneering Inc. Donde encabezaba el desarrollo de software para el análisis de opciones financieras, consultoría analítica, entrenamiento, y soporte técnico, y donde fue el creador del Real Options Analysis Toolkit Software, el predecesor del Real Options Super Lattice software. Antes de unirse a Decisioneering Inc. Fue Director Consultor y economista financiero en valoración de servicios y servicios financieros globales en KPMG Consulting. Tiene una experiencia extensiva en modelación econométrica, análisis financiero, opciones reales, análisis económico, y estadística. En su paso por Real Options Valuation Inc., Decisioneering, y KPMG, había enseñado y consultado en una variedad de asuntos sobre opciones reales, análisis de riesgo, pronósticos financieros, dirección de proyectos, y valoración financiera en cerca de 100 firmas multinacionales incluyendo(3M, Airbus, Boeing, BP, Chevron Texaco, Financial Accounting Standards Board, Fujitsu, GE, Microsoft, Motorola, Pfizer, State of California, Timken, U.S. Department of Defense, U.S. Navy, Veritas, y muchas otras). Su experiencia antes de unirse a KPMG incluye ser el Director del Departamento de análisis y planeación financiera en Viking Inc. De FedEx, realizando proyecciones financieras, análisis económico, e investigación de mercados. Antes de eso hacia consultoría y planeación financiera.

El Dr. Mun recibió su Ph. D en economía y finanzas de Lehigh University, donde sus intereses académicos y de investigación fueron en las áreas de inversión financiera, modelación econométrica, opciones financieras, finanzas corporativas, y teoría microeconómica. También tiene un M.B.A., un M.S., en gestión científica, y un B.S., en biología y física. Esta certificado en Gestión de Riesgo Financiero (FRM), en Consultoría Financiera (CFC), y en Gestión de riesgo (CRM). Es miembro de la American Mensa, Phi Beta Kappa Honor Society, y Golden Key Honor Society, así como muchas otras organizaciones profesionales incluyendo Eastern and Southern Finance Associations, American Economic Association, and Global Association of Risk Professionals. Finalmente ha escrito muchos artículos académicos publicados en el Journal of Financial Analysis, the Journal of Applied Financial Economics, the Journal of International Financial Markets, Institutions and Money, the Financial Engineering News, and the Journal of the Society of Petroleum Engineers.

Análisis de Riesgo

DVD de Entrenamiento

DVD de entrenamiento cubre:

Simulación Monte Carlo con Risk Simulator

- Estadísticas de simulación aplicadas
- Escogiendo las distribuciones relevantes
- Simulación correlacionada y truncada
- Interpretando los resultados de la simulación
- Simulación y perfiles multidimensionales

Pronósticos con Risk Simulator

- Modelos Box-Jenkins ARIMA
- Análisis de regresión multivariada
- Pronósticos de procesos Estocásticos
- Pronosticando series de tiempo y extrapolación no lineal

Optimización con Risk Simulator

- Optimización Continua
- Herramientas de análisis de decisión
- Optimización Entera

Analisis de opciones reales con Real Options Super Lattice Solver

- Bases de análisis para opciones reales
- Proceso integrado de análisis de riesgo y estimaciones de volatilidad
- Resolviendo diferentes opciones reales usando SLS incluyendo abandono, Americanas, Barrera, Bermuda, chooser complex custom, contracción, Europea, expansión, sequential compound, switching, multi-asset and multiphased complex sequential compound y muchas más

Herramientas Analíticas

- Ajuste de la Distribución
- Pruebas de hipótesis
- Simulación no-paramétrica
- Análisis de sensibilidad, gráficos tornados y spider

TRAINING DVD

El DVD de entrenamiento comprende 10 DVDS y cubre las siguientes áreas:

- **Simulación Monte Carlo con Risk Simulator**
- **Pronósticos con Risk Simulator**
- **Optimización con Risk Simulator**
- **Análisis de opciones reales con Real Options Super Lattice Solver**
- **Herramientas Analíticas**

Como parte del DVD de entrenamiento, usted recibirá 10DVDS, un libro de trabajo con las diapositivas y ejemplos en los DVDS, y los siguientes dos libros: "Modeling Risk: Applying Monte Carlo Simulation, Real Options Analysis, Forecasting, and Optimization, 2nd Edition," by Dr. Johnathan Mun (Wiley Finance, 2006), and "Real Options Analysis: Tools and Techniques, 2nd Edition," by Dr. Johnathan Mun (Wiley Finance 2005), y los CD de modelos de entrenamiento usado en las lecciones.

Las lecciones son desarrolladas y dictadas por Dr. Johnathan Mun, el creador de Risk Simulator y Real Options Super Lattice software, profesor de finanzas y economía, autor de muchos libros en riesgo y opciones reales, y CEO de Real Options Analysis Inc. Esto es particularmente importante en términos de consistencia y destreza, pues usted aprende el material directamente de quien desarrollo el software, escribió los libros y consulta para muchas empresas.

En cada DVD, hay una introducción a los temas, también como resultados de cada módulo. Cada DVD es dividido en varios capítulos resumidos a continuación:

DVD 1: Introducción a análisis de riesgo

- Capítulo 1: introducción al DVD de entrenamiento
- Capítulo 2: Como están hechas las decisiones de negocios?
- Capítulo 3: Que es riesgo y porqué debe ser considerado?
- Capítulo 4: Visión sobre las aplicaciones de software de riesgo

DVD 2: Simulación Monte Carlo con Risk Simulator

- Capítulo 1: Visión del software del Risk Simulator
- Capítulo 2: Perfil, supuestos, pronósticos y gestión de simulaciones
- Capítulo 3: interpretando las estadísticas pronosticadas
- Capítulo 4: preferencias de simulación y valores
- Capítulo 5: Gestión de reportes, guardar y extraer datos de simulación

DVD3: Tecnicas de simulacion avanzadas

- Capítulo 1: distribuciones correlacionadas y truncadas
- Capítulo 2: parametros alternos
- Capítulo 3: Simulaciones multidimensionales
- Capítulo 4: Ajuste de la distribución y elección de distribuciones
- Capítulo 5: Análisis de datos históricos y dificultades en simulación

DVD 4: Herramientas de simulación y analíticas

- Capítulo 1: Tornado Estático y gráficos Spider
- Capítulo 2: Análisis de sensibilidad dinámicos
- Capítulo 3: Pruebas de hipótesis con diferentes distribuciones
- Capítulo 4: simulación Bootstrap no-parametrica
- Capítulo 5: control de precisión

DVD 5: Pronosticos

- Capítulo 1: Técnicas de pronósticos y tipos de datos
- Capítulo 2: Pronósticos sin datos
- Capítulo 3: Pronósticos sobre análisis de Series de Tiempo
- Capítulo 4: Extrapolacion no lineal
- Capítulo 5: Analisis de Regresion Multivariado
- Capítulo 6: Procesos Estocásticos
- Capítulo 7: Box-Jenkins ARIMA

DVD 6-7: Análisis de Opciones Reales : Teoría y Antecedentes

- Capítulo 1: Introducción a Opciones Reales: qué, donde, quién, cuando, cómo y porqué
- Capítulo 2: Ejemplos de Casos Aplicados
- Capítulo 3: Visión sobre diferentes técnicas de valoración de opciones: modelos de forma cerrada, ecuaciones parciales diferenciales, y enrejados binomiales
- Capítulo 4: técnica de probabilidad libre de riesgo
- Capítulo 5: resolver una opción call básica Europea y Americana
- Capítulo 6: usar Excel para resolver opciones básicas Americanas
- Capítulo 7: resolver Opciones de abandono básico, expansión, contracción, y opciones mutuamente excluyentes

DVD 8-9: Real Options Analysis: Aplicación con software SLS

- Capítulo 1: Visión de los diferentes módulos SLS
- Capítulo 2: Estimar Volatilidad (GARCH, Log PV Asset, Log Cash Flow Returns, management assumptions)
- Capítulo 3: resolver opciones con entradas cambiantes y opciones exóticas personalizables
- Capítulo 4: MSLs: múltiples opciones secuenciales compuestas
- Capítulo 5: MNLS: resolviendo procesos de Reversión a la media, jump-diffusion, y dual-asset opciones arco iris usando enrejados trinomiales, cuadrinomiales, y pentanomiales.
- Capítulo 6: Enmarcar opciones reales- estructurando el problema
- Capítulo 7: Los siguientes pasos...

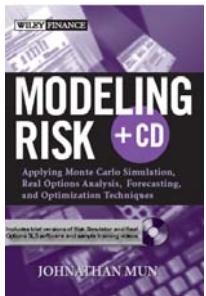

DVD 10: Optimización con Risk Simulator

- Capítulo 1: Introducción a problemas de optimización
- Capítulo 2: Optimización continua
- Capítulo 3: Optimización Entera

CONOCIMIENTOS TECNICOS

Dr. Johnathan Mun es el creador del Software y enseña Análisis de Riesgo, Análisis de Opciones Reales, Análisis de Riesgo para Gerentes, CRM, y otros cursos. Ha sido Consultor de muchas firmas que están en la lista Fortune 500 (3M,Airbus, Boeing, GE y Motorola) y para el gobierno (Departamento de Defensa, Agencias Estatales y Federales) en Análisis de Riesgo, Valoración y Opciones Reales. Ha escrito muchos libros en temas de: Análisis de Opciones Reales: Técnicas y Herramientas, Primera y Segunda Edición (Wiley Finance, 2005, 2002); Curso de Análisis Opciones Reales: Casos de Negocios (Wiley Finace, 2003); Análisis de Riesgo Aplicada: Mas allá de la Incertidumbre en los Negocios (Wiley, 2003); Valoración de Opciones de Acciones para los Empleados en Virtud 2004 FAS 123 (Wiley Finance, 2004); Modelando Riesgo: Aplicación Simulación Monte Carlo, Análisis de Opciones Reales, Pronostico y Optimización (Wiley 2006); Modelos Analíticos Avanzados: 800 Funciones y 300 Modelos de Basilea II a Wall Street y mas Allá (Wiley 2008); The Banker's Hand Book on Credit Risk: Implantación de Basilea II (Elsevier Academic Press 2008); y otros. Es el Fundador y Director General en Valoración de Opciones Reales, Inc., y es el responsable del desarrollo de análisis de productos de Software, consultoría y entrenamiento en servicios. Fue Vicepresidente de Analytics at Decisioneering, Inc. (Oracle), y fue Gerente de Consultoría en KPMG's Global Financial Startegies. Antes de KPMG, fue jefe de pronóstico financiar para Vikings, Inc. (FDX/FedEx Company). Dr Mun es también catedrático en U.S. Naval Postgraduate School y Catedrático en la University of Applied Science and Swiss School of Management (Zürich and Frankfurt), y se ha encargado de otras cátedras en varias universidades. Tiene un PH.D en Finanzas y Economía, un MBA en Administración de Empresas, M.S. en Gestión de Ciencia, y BS en Licenciatura en Ciencias Aplicadas. El esta certificado en Gestión de Riesgo Financiero (GRF), Certificado en Consultoría Financiera (CCF) y Certificado en Manejo de Riesgo (CRM).

Modeling Risk: Applying Monte Carlo Simulation, Real Options Analysis, Stochastic Forecasting, and Optimization,

Dr. Johnathan Mun

ISBN: 0471789003 (2006)

Hard Cover and Cloth, 610 Pages

Available on www.amazon.com

Keyword: JOHNATHAN MUN

We live in an environment fraught with risk and operate our businesses in a risky world, as higher rewards only come with risks. It is unimaginable if the element of risk is not considered when corporate strategy is framed and when tactical projects are implemented. Modeling Risk provides a novel view of evaluating business decisions, projects, and strategies by taking into consideration a unified strategic portfolio analytical process. The book provides a qualitative and quantitative description of risk, as well as introductions to the methods used in identifying, quantifying, applying, predicting, valuing, hedging, diversifying, and managing risk, through rigorous examples of the methods' applicability in the decision-making process.

Pragmatic applications are emphasized in order to demystify the many elements inherent in risk analysis. A black box will remain a black box if no one can understand the concepts despite its power and applicability. It is only when the black box becomes transparent that analysts can understand, apply, and convince others of its results, value-add, and applicability, that the approach will receive wide-spread influence. This is done through step-by-step applications of risk analysis as well as presenting multiple business cases, and discussing real-life applications. This book is targeted at both the uninitiated professional as well as those verbose in risk analysis—there is always something for everyone. It is also applicable for use as a second-year M.B.A. level or introductory Ph.D. textbook. A CD-ROM is included in the book, including a trial version of the Risk Simulator and Real Options SLS software, and associated Excel models.

ABOUT THE AUTHOR

Dr. Johnathan C. Mun is the founder, chairman and CEO of Real Options Valuation, Inc. (ROV), a consulting, training, and software development firm specializing in strategic real options, financial valuation, Monte Carlo simulation, stochastic forecasting, optimization, and advanced analytics located in northern Silicon Valley, California. ROV has partners around the world including Beijing, Chicago, Colombia, Hong Kong, Mexico City, New York, Nigeria, Shanghai, Singapore, Spain, Zurich, and other locations. ROV also has a local office in Shanghai. He is also the chairman of the International Institute of Professional Education and Research (IIPER), an accredited global organization providing the Certified in Risk Management (CRM) designation, among others, staffed by professors from named universities from around the world. He is the creator of multiple software tools including *Risk Simulator*, *Real Options SLS*, *Modeling Toolkit*, *Basel II Modeler*, *ROV Modeler*, *ROV Optimizer*, *ROV Valuator*, *ROV Extractor* and *Evaluator*, *ROV Compiler*, *ROV BizStats*, *ROV Dashboard*, *Employee Stock Options Valuation* software and others (some of these tools are showcased in this book), as well as the risk analysis Training DVD. He has authored ten books published by John Wiley & Sons and Elsevier Science, including *The Banker's Handbook on Credit Risk* (2008); *Advanced Analytical Models: 250 Applications from Basel II Accord to Wall Street and Beyond* (2008); *Modeling Risk: Applying Monte Carlo Simulation, Real Options, Optimization, and Forecasting* (2006); *Real Options Analysis: Tools and Techniques, First and Second Editions* (2003 and 2005); *Real Options Analysis Course: Business Cases* (2003); *Applied Risk Analysis: Moving Beyond Uncertainty* (2003); and *Valuing Employee Stock Options* (2004). His books and software are being used at top universities around the world. Dr. Mun is also currently a finance and economics professor and has taught courses in financial management, investments, real options, economics, and statistics at the undergraduate and the graduate MBA levels. He teaches and has taught at universities all over the world, from the U.S. Naval Postgraduate School (Monterey, California) and University of Applied Sciences (Switzerland and Germany) as full professor, to Golden Gate University (California) and San Francisco State University (California) as adjunct professor, and has chaired many graduate research MBA thesis and Ph.D. dissertation committees. He was formerly the Vice President of Analytics at Decisioneering, Inc. Before that, he was a Consulting Manager and Financial Economist in the Valuation Services and Global Financial Services practice of KPMG Consulting and a Manager with the Economic Consulting Services practice at KPMG LLP. He has taught and consulted for over 100 multinational firms (former clients include 3M, Airbus, Boeing, BP, Chevron Texaco, Financial Accounting Standards Board, Fujitsu, GE, Microsoft, Motorola, Pfizer, Timken, U.S. Department of Defense, State and Local Governments, Veritas, and many others). His experience prior to joining KPMG included being department head of financial planning and analysis at Viking Inc. of FedEx, performing financial forecasting, economic analysis, and market research.

Dr. Mun received his Ph.D. in Finance and Economics from Lehigh University, where his research and academic interests were in the areas of investment finance, econometric modeling, financial options, corporate finance, and microeconomic theory. He also has an MBA in business administration, an MS in management science, and a BS in Biology and Physics. He is Certified in Financial Risk Management (FRM), Certified in Financial Consulting (CFC), and Certified in Risk Management (CRM). He is a member of the American Mensa, Phi Beta Kappa Honor Society, and Golden Key Honor Society as well as several other professional organizations, including the Eastern and Southern Finance Associations, American Economic Association, and Global Association of Risk Professionals. In addition, he has written many academic

articles published in the Journal of the Advances in Quantitative Accounting and Finance, the Global Finance Journal, the International Financial Review, the Journal of Financial Analysis, the Journal of Applied Financial Economics, the Journal of International Financial Markets, Institutions and Money, the Financial Engineering News, and the Journal of the Society of Petroleum Engineers.

PRAISES FOR REAL OPTIONS ANALYSIS

Johnathan Mun's book is a sparkling jewel in my finance library. Mun demonstrates a deep understanding of the underlying mathematical theory in his ability to reduce complex concepts to lucid explanations and examples. For this reason, he's my favorite writer in this field. Experienced professionals will appreciate Mun's competence in boiling down complex math to a clear presentation of the essential solutions to financial risk, corporate finance, and forecasting.

Janet Tavakoli

President, Tavakoli Structured Finance

Every year the market of managerial books is flooded again and again. This book is different. It puts a valuable tool into the hands of corporate managers, who are willing to stand up against uncertainties and risks and are determined to deliver value to shareholder and society even in rough times. It is a book for the new generation of managers, for whom Corporate America is waiting.

Dr. Markus Götz Junginger

Managing Partner, IBCOL Consulting AG (Switzerland)

Dr. Mun breaks through the hyperbole and presents a clear step-by-step approach revealing to readers how quantitative methods and tools can truly make a difference. In short, he teaches you what's relevant and a must know. I highly recommend this book, especially if you want to effectively incorporate the latest technologies into your decision making process for your real world business.

Dr. Paul W. Finnegan, MD, MBA

Vice President, Commercial Operations and Development

Alexion Pharmaceuticals, Inc.

Johnathan Mun has previously published a number of very popular books dealing with different aspects of risk analysis, associated techniques and tools. This last publication puts all the pieces together. The book is really unavoidable for any professional who wants to address risk evaluation following a logical, concrete and conclusive approach.

Jean Louis Vaysse

Deputy Vice President Marketing, Airbus (France)

A must read for product portfolio managers... it captures the risk exposure of strategic investments, and provides management with estimates of potential outcomes and options for risk mitigation.

Rafael E. Gutierrez

Executive Director of Strategic Marketing and Planning, Seagate Technology

Mun has the uncanny ability to clarify the complex, distilling risk analysis concepts into a truly readable and practical guide for decision-makers. This book blazes a trail that connects abstract yet powerful theories with real-world applications and examples, leaving the reader enlightened and empowered.

Stephen Hoye, MBA

President, Hoye Consulting Group

Strategy development has fallen on hard times being judged not relevant for a rapidly changing world. With this book, Dr. Mun attacks this poor excuse head-on by presenting a clearly organized, tool supported, methodology that logically progresses from exploring uncertainty that bounds risk to the creation of options for constructing realistic business strategies.

Robert Mack

Vice President, Distinguished Analyst, Gartner Group

This book is a pleasure to read both for subject matter experts as well as for novices. It holds a high risk of addicting the readers. Dr. Mun leads the readers through step by step complex mathematical concepts with unmatched ease and clarity. Well chosen examples and pointers to pitfalls complement the splendidly written chapters. This book will be a bestseller in Risk Management and is a "must read" for all professionals.

Dr. Hans Weber

Syngenta AG (Switzerland), Product Development Project Leader

Once again, Dr. Johnathan Mun has attained his usual standard: excellence in making not-so-simple but very useful quantitative analytical techniques accessible to the interested reader who doesn't necessarily have an engineering or scientific training. This book presents a seriously comprehensive guide to everyday users of spreadsheet models, particularly those interested in Risk Analysis and Management, on how to move beyond simple statistical analysis. It is a "must have" to academics searching for user-friendly bibliography, and to practitioners willing to get a first-hand experience on cutting-edge, high-productivity analytical tools.

Dr. Roberto J. Santillan-Salgado

Director of the M.S., EGADE-ITESM, Monterrey Campus (Mexico)

A fundamental principal in finance is the relationship between risk and reward, yet today empirical risk measurement, valuations, and deal structuring are still the norm. Business professionals, venture capitalists and other investors will all find Johnathan Mun's latest book on conceptualizing and quantitatively measuring risk in business of considerable value and a welcome addition to their libraries.

Dr. Charles T. Hardy

Principal, Hardy & Associates

TABLE OF CONTENTS

SECTION ONE – RISK IDENTIFICATION

CHAPTER 1 – MOVING BEYOND UNCERTAINTY

A Brief History of Risk: What Exactly Is Risk?

Uncertainty versus Risk

Why Is Risk Important in Making Decisions?

Dealing with Risk the Old-Fashioned Way

The Look and Feel of Risk and Uncertainty

Integrated Risk Analysis Framework

1. Qualitative Management Screening
2. Time-Series and Regression Forecasting
3. Base Case Net Present Value Analysis
4. Monte Carlo Simulation
5. Real Options Problem Framing
6. Real Options Modeling and Analysis
7. Portfolio and Resource Optimization
8. Reporting and Update Analysis

SECTION TWO – RISK EVALUATION

CHAPTER 2 – FROM RISK TO RICHES

Taming the Beast

The Basics of Risk

The Nature of Risk and Return

The Statistics of Risk

The Measurements of Risk

Appendix 2—Computing Risk

CHAPTER 3 – A GUIDE TO MODEL-BUILDING ETIQUETTE

Model Building Etiquette

Appendix 3—A Primer on VBA Modeling and Writing Macros

SECTION THREE – RISK QUANTIFICATION

CHAPTER 4 – ON THE SHORES OF MONACO

What Is Monte Carlo Simulation?

Why Are Simulations Important?

Comparing Simulation with Traditional Analyses

Using Risk Simulator and Excel to Perform Simulations

CHAPTER 5 – TEST DRIVING RISK SIMULATOR

Getting Started with Risk Simulator

Running a Monte Carlo Simulation

Using Forecast Charts and Confidence Intervals

Correlations and Precision Control

Appendix 6—Understanding Probability Distributions

CHAPTER 6 – PANDORA'S TOOL BOX

Tornado and Sensitivity Tools in Simulation

Sensitivity Analysis

Distributional Fitting: Single Variable and Multiple Variables

Bootstrap Simulation

Hypothesis Testing

Data Extraction, Saving Simulation Results, and Generating Reports

Custom Macros

Appendix 6—Goodness-of-Fit Tests

SECTION FOUR – INDUSTRY APPLICATIONS

CHAPTER 7 – EXTENDED BUSINESS CASES I: PHARMACEUTICAL AND BIOTECH NEGOTIATIONS, OIL AND GAS EXPLORATION, FINANCIAL PLANNING WITH SIMULATION, HOSPITAL RISK MANAGEMENT, AND RISK-BASED EXECUTIVE COMPENSATION VALUATION

Case Study: Pharmaceutical and Biotech—High Precision Quantitative

Deal Structuring in the Biotechnology and Pharmaceutical Industries

Case Study: Oil and Gas Exploration and Production

Case Study: Financial Planning with Simulation

Case Study: Hospital Risk Management

Case Study: Risk-based Executive Compensation Valuation

SECTION FIVE – RISK PREDICTION

CHAPTER 8 – TOMORROW'S FORECAST TODAY

Different Types of Forecasting Techniques

Running the Forecasting Tool in Risk Simulator

Time-series Analysis

Multivariate Regression

Stochastic Forecasting

Nonlinear Extrapolation

Box-Jenkins ARIMA Advanced Time-series

CHAPTER 9 – USING THE PAST TO PREDICT THE FUTURE

Time-Series Forecasting Methodology

No Trend and No Seasonality

With Trend But No Seasonality

No Trend But With Seasonality

With Seasonality and With Trend

Regression Analysis

The Pitfalls of Forecasting: Outliers, Nonlinearity, Multicollinearity, Heteroskedasticity, Autocorrelation, and Structural Breaks

Appendix 9A—Forecast Intervals

Appendix 9B—Ordinary Least Squares

Appendix 9C—Detecting and Fixing Heteroskedasticity

Appendix 9D—Detecting and Fixing Multicollinearity

Appendix 9E—Detecting and Fixing Autocorrelation

SECTION SIX – RISK DIVERSIFICATION

CHAPTER 10 – THE SEARCH FOR THE OPTIMAL DECISION

What is an Optimization Model?

The Traveling Financial Planner

The Lingo of Optimization

Solving Optimization Graphically and Using Excel's Solver

CHAPTER 11 – OPTIMIZATION UNDER UNCERTAINTY

Optimization Procedures

Continuous Optimization

Discrete Integer Optimization

Questions and Exercises

Appendix 11—Computing Annualized Returns and Risk for Portfolio Optimization

SECTION SEVEN – RISK MITIGATION

CHAPTER 12 – WHAT'S SO REAL ABOUT "REAL OPTIONS", AND WHY ARE THEY OPTIONAL?

What Are Real Options?

The Real Options Solution in a Nutshell

Issues to Consider

Implementing Real Options Analysis

Industry Leaders Embracing Real Options

Automobile and Manufacturing Industry

Computer Industry

Airline Industry

Oil and Gas Industry

Telecommunications Industry

Utilities Industry

Real Estate Industry

Pharmaceutical Research and Development Industry

High-Tech and e-Business Industry

Mergers and Acquisition

What the Experts Are Saying

Criticisms, Caveats, and Misunderstandings in Real Options

CHAPTER 13 – BLACK BOX MADE TRANSPARENT: REAL OPTIONS SLS

Introduction to the Real Options Super Lattice Solver Software

Single Asset Super Lattice Solver (SLS)

Multiple Super Lattice Solver (MSLS)

Multinomial Lattice Solver (MNLs)

SLS Excel Solution (SLS, MSLS and Changing Volatility Models in Excel)

SLS Functions

Lattice Maker

SECTION EIGHT – MORE INDUSTRY APPLICATIONS

CHAPTER 14 – EXTENDED BUSINESS CASES II: REAL ESTATE, BANKING, MILITARY STRATEGY, AUTOMOTIVE PARTS MANUFACTURING, AND GLOBAL EARTH OBSERVATION SYSTEMS

Case Study: Understanding Risk and Optimal Timing in a Real Estate Development Using Real Options Analysis

Case Study: Using Stochastic Optimization and Valuation Models to Evaluate the Credit Risk of Corporate Restructuring

Case Study: Manufacturing and Sales in the Automotive Aftermarket

Case Study: The Boeing Company's Strategic Analysis of the Global Earth Observing System of Systems

Case Study: Valuing Employee Stock Options Under The 2004 FAS 123R

SECTION NINE – RISK MANAGEMENT

CHAPTER 15 – THE WARNING SIGNS

The Problem of Negligent Entrustment

Management's Due Diligence

Sins of an Analyst

Reading the Warning Signs in Monte Carlo Simulation

Reading the Warning Signs in Time-Series Forecasting and Regression

Reading the Warning Signs in Real Options Analysis

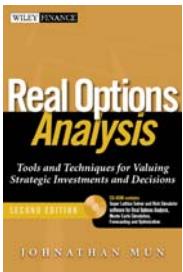

Reading the Warning Signs in Optimization under Uncertainty

CHAPTER 16 – CHANGING A CORPORATE CULTURE

How to Get Risk Analysis Accepted in an Organization

Change-Management Issues and Paradigm Shifts

Making Tomorrow's Forecast Today

Real Options Analysis, 2nd Edition: Tools and Techniques for Valuing Strategic Investments & Decisions

Dr. Johnathan Mun

ISBN: 0471747483 (2005)

Hard Cover and Cloth, 670 Pages

Available on www.amazon.com

Keyword: JOHNATHAN MUN

Real Options Analysis, 2nd edition provides a novel view of evaluating capital investment strategies by taking into consideration the strategic decision-making process. The book provides a qualitative and quantitative description of real options, the methods used in solving real options, why and when they are used, and the applicability of these methods in decision making. In addition, multiple business cases and real-life applications are discussed. This includes presenting and framing the real options problems, as well as introducing a stepwise quantitative process developed by the author for solving these problems using the different methodologies inherent in real options. Included are technical presentations of models and approaches used as well as their theoretical and mathematical justifications. The book is divided into three parts: the qualitative discussions of real options; the quantitative analysis and mathematical concepts; and practical applications. The first part looks at the qualitative nature of real options, providing actual business cases and scenarios of real options in the industry, as well as high-level explanations of how real options provide the much-needed insights in decision making. The second part of the book looks at the step-by-step quantitative analysis, complete with worked-out examples and mathematical formulae. The third part illustrates the use of the Real Options Valuation's Super Lattice Solver software and Risk Simulator software both developed by the author and included in the enclosed CD-ROM (standard 30-day trial with extended academic license). In this section, more detailed business cases are solved using the software.

This second edition provides many updates including:

- A trial version and introduction to the Real Options Super Lattice Solver software that supersedes the author's older Real Options Analysis Toolkit software (all bugs and computational errors have been fixed and verified).
- A trial version and introduction to the Risk Simulator software also created by the author.
- Extended examples and step-by-step computations of American, Bermudan, European, and Customized options (including abandon, barrier, chooser, contraction, expansion, and other options).
- More extensive coverage of advanced and exotic real and financial options (multiple-phased sequential compound options, complex sequential compound option, barrier options, trinomial mean-reverting options, quadrinomial jump-diffusion options, pentanomial dual-asset rainbow options, multiple-asset with multiple-phased options, engineering your own exotic options, and so forth).
- Extended real options cases with step-by-step worked out solutions using the Super Lattice Solver software.
- Several brand new case studies on applying real options in the industry.
- An extended discussion on volatility estimates, risk, and uncertainty.
- This book is targeted at both the uninitiated professional as well as those well-versed in real options applications. It is also applicable for use as a second-year M.B.A. level textbook or introductory Ph.D. reference book.

ABOUT THE AUTHOR

Dr. Johnathan C. Mun is the founder, chairman and CEO of Real Options Valuation, Inc. (ROV), a consulting, training, and software development firm specializing in strategic real options, financial valuation, Monte Carlo simulation, stochastic forecasting, optimization, and advanced analytics located in northern Silicon Valley, California. ROV has partners around the world including Beijing, Chicago, Colombia, Hong Kong, Mexico City, New York, Nigeria, Shanghai, Singapore, Spain, Zurich, and other locations. ROV also has a local office in Shanghai. He is also the chairman of the International Institute of Professional Education and Research (IIPER), an accredited global organization providing the Certified in Risk Management (CRM) designation, among others, staffed by professors from named universities from around the world. He is the creator of multiple software tools including *Risk Simulator*, *Real Options SLS*, *Modeling Toolkit*, *Basel II Modeler*, *ROV Modeler*, *ROV Optimizer*, *ROV Valuator*, *ROV Extractor and Evaluator*, *ROV Compiler*, *ROV BizStats*, *ROV Dashboard*, *Employee Stock Options Valuation* software and others (some of these tools are showcased in this book), as well as the risk analysis Training DVD. He has authored ten books published by John Wiley & Sons and Elsevier Science, including *The Banker's Handbook on Credit Risk* (2008); *Advanced Analytical Models: 250 Applications from Basel II Accord to Wall Street and Beyond* (2008); *Modeling Risk: Applying Monte Carlo Simulation, Real Options, Optimization, and Forecasting* (2006); *Real Options Analysis: Tools and Techniques, First and Second Editions* (2003 and 2005); *Real Options Analysis Course: Business Cases* (2003); *Applied Risk Analysis: Moving Beyond Uncertainty* (2003); and *Valuing Employee Stock Options* (2004). His books and software are being used at top universities around the world. Dr. Mun is also currently a finance and economics professor and has taught courses in financial management, investments, real options, economics, and statistics at the undergraduate and the graduate MBA levels. He teaches and has taught at universities all over the world, from the U.S. Naval Postgraduate School (Monterey, California) and University of Applied Sciences (Switzerland and Germany) as full professor, to Golden Gate University (California) and San Francisco State University (California) as adjunct

professor, and has chaired many graduate research MBA thesis and Ph.D. dissertation committees. He was formerly the Vice President of Analytics at Decisioneering, Inc. Before that, he was a Consulting Manager and Financial Economist in the Valuation Services and Global Financial Services practice of KPMG Consulting and a Manager with the Economic Consulting Services practice at KPMG LLP. He has taught and consulted for over 100 multinational firms (former clients include 3M, Airbus, Boeing, BP, Chevron Texaco, Financial Accounting Standards Board, Fujitsu, GE, Microsoft, Motorola, Pfizer, Timken, U.S. Department of Defense, State and Local Governments, Veritas, and many others). His experience prior to joining KPMG included being department head of financial planning and analysis at Viking Inc. of FedEx, performing financial forecasting, economic analysis, and market research.

Dr. Mun received his Ph.D. in Finance and Economics from Lehigh University, where his research and academic interests were in the areas of investment finance, econometric modeling, financial options, corporate finance, and microeconomic theory. He also has an MBA in business administration, an MS in management science, and a BS in Biology and Physics. He is Certified in Financial Risk Management (FRM), Certified in Financial Consulting (CFC), and Certified in Risk Management (CRM). He is a member of the American Mensa, Phi Beta Kappa Honor Society, and Golden Key Honor Society as well as several other professional organizations, including the Eastern and Southern Finance Associations, American Economic Association, and Global Association of Risk Professionals. In addition, he has written many academic articles published in the Journal of the Advances in Quantitative Accounting and Finance, the Global Finance Journal, the International Financial Review, the Journal of Financial Analysis, the Journal of Applied Financial Economics, the Journal of International Financial Markets, Institutions and Money, the Financial Engineering News, and the Journal of the Society of Petroleum Engineers.

PRAISES FOR REAL OPTIONS ANALYSIS

“...this book is a *must have* and *must read*... Dr. Mun's new book is a refreshing, cutting-edge look at a powerful new decision-making process... it isn't often you can truthfully say a book breaks new ground, but [this book] has certainly done that.”

-Glenn G. Kautt, President, Monitor Group, Inc. (USA)

“Many books on real options can be intimidating. Dr. Mun offers a pragmatic, reliable and entertaining guide. Complex concepts and formulas are brilliantly interspersed with well chosen examples and step-by-step walk through from a variety of industries.”

-Shota Hattori, President and CEO, Kozo Engineering, (Japan)

“Real Options Analysis is the clearest book on real options that we have read to date. It does an excellent job of demystifying a difficult and complex subject. It provides a solid basis for conceiving, assessing and evaluating real option investments, which will make it useful to practitioners and students alike.”

-Ian C. MacMillan, Professor

The Wharton School of the University of Pennsylvania (USA)

“...the clarity and comprehensive coverage makes it the best guide for all practitioners... coupled with state-of-the-art financial tools CD-ROM.”

-Michael Sim, Partner, Moores Rowland International (Hong Kong)

“Dr. Johnathan Mun certainly has earned the reputation of being an expert on the subject... consultants, analysts, decision-makers and engineers will be all over this book and its software.”

-Phyllis Koessler, Managing Director, Koessler and Associates (Switzerland)

“...finally, a real options analysis book that is technically sophisticated enough to be useful, and practically written so that it can actually be used. It is destined to become the handbook of real options.”

-Tracy Gomes, CEO, Intellectual Property Economics (USA)

“Dr. Mun demystifies real options analysis and delivers a powerful, pragmatic guide for decision-makers and practitioners alike. Finally, there is a book that equips professionals to easily recognize, value, and seize real options in the world around them.”

- Jim Schreckengast, Sr. Vice President, R&D Strategy – Gemplus International SA (France)

“...written from the viewpoint of an educator and a practitioner, his book offers a readable reference full of insightful decision-making tools to satisfy both the novice and the experienced veteran.”

-Richard Kish, Ph.D., Professor of Finance, Lehigh University (USA)

“Dr. Mun has converted his tacit financial knowledge into a digestible user-friendly book. He effectively leads the reader on a solid path starting from *discounted cash flow*, progressing through *Monte Carlo analysis* and evolving to *real options* to get even closer to the target of achieving confident corporate decisions. His ability to clearly explain the relationships of popular competing analysis methods will make this a must have reference book for today's decision makers.”

-Ken English, Director of R&D, The Timken Company (USA)

“The book leads the field in real options analytics and is a must-read for anyone interested in performing such analyses. Dr. Mun has made a formidable subject crystal clear and exponentially easy for senior management to understand. *Monte Carlo simulation* and *real options* software alone is worth the book price many times over.”

-Morton Glantz, Renowned educator in finance, author of several books, financial advisor to government (USA)

TABLE OF CONTENTS

Chapter One: A New Paradigm?

- Expansion and Compound Options: The Case of the Operating System
- Expansion Options: The Case of the e-Business Initiative
- Expansion and Sequential Options: The Case of the Pharma R&D
- Expansion and Switching Options: The Case of the Oil and Gas
 - Exploration and Production
- Abandonment Options: The Case of the Manufacturer
- Expansion and Barrier Options: The Case of the Lost Venture Capitalist
- Compound Expansion Options: The Case of the Internet Start-up
- The Real Options Solution
- Issues to Consider
- Industry Leaders Embracing Real Options
- Automobile and Manufacturing Industry, Computer Industry, Airline Industry, Oil and Gas Industry, Telecommunications Industry, Utilities Industry, Real Estate Industry, Pharmaceutical Research and Development Industry, High-Tech and e-Business Industry, Mergers and Acquisition
- What the Experts Are Saying
- Criticisms, Caveats, and Misunderstandings in Real Options
- Appendix 1A – Timken Company on Real Options in R&D Manufacturing
- Appendix 1B – Schlumberger on Real Options in Oil and Gas
- Appendix 1C – Intellectual Property Economics on Real Options in Patent and Intangible Valuation
- Appendix 1D – Gemplus on Real Options in High-Tech R&D

Chapter Two: Traditional Valuation Approaches

- Practical Issues Using Traditional Valuation Methodologies
- Appendix 2A – Financial Statement Analysis
- Appendix 2B – Discount Rate versus Risk-Free Rate

Chapter Three: The Fundamental Essence of Real Options

- The Basics of Real Options
- A Simplified Example of Real Options in Action
- Advanced Approaches to Real Options
- Why Are Real Options Important?
- Comparing Traditional Approaches with Real Options

Chapter Four: The Real Options Process

- Critical Steps in Performing Real Options
- Qualitative Management Screening
- Time-Series and Regression Forecasting
- Base Case Net Present Value Analysis
- Monte Carlo Simulation
- Real Options Problem Framing
- Real Options Modeling and Analysis
- Portfolio and Resource Optimization
- Reporting and Update Analysis

Chapter Five: Options and Monte Carlo Simulation

- Real Options versus Financial Options
- Monte Carlo Simulation

Chapter Six: Behind the Scenes

- Real Options: Behind the Scenes
- Binomial Lattices
- The Look and Feel of Uncertainty
- A Firm's Real Options Provide Value in the Face of Uncertainty
- Binomial Lattices as a Discrete Simulation of Uncertainty
- Risk versus Uncertainty, Volatility versus Discount Rates
- Risk versus Uncertainty
- Discount Rates
- Hard Options versus Soft Options: Adjusting for Nonmarketability of Real Options
- Granularity Leads to Precision
- An Intuitive Look at the Binomial Equations
- Frolicking in a Risk-Neutral World

Chapter Seven: Real Options Models

- Option to Abandon, Option to Expand, Option to Contract
 - Option to Choose, Simultaneous Compound Options, Changing Strikes, Changing Volatility, Sequential Compound Option
- Extension to the Binomial Models
- Appendix 7A – Volatility Estimates
- Appendix 7B – Black-Scholes in Action
- Appendix 7C – Binomial Path-Dependent and Market-Replicating Portfolios
 - Risk-Neutral Probability Approach versus Market Replicating Approach
- Appendix 7D – Single-State Static Binomial Example
- Appendix 7E – Sensitivity Analysis
- Appendix 7F – Reality Checks
- Appendix 7G – Applying Monte Carlo Simulation to Solve Real Options
- Appendix 7H – Trinomial Lattices
- Appendix 7I – Nonrecombining Lattices

Chapter Eight: Additional Issues in Real Options

- Project Ranking, Valuation, and Selection
- Decision Trees, Exit and Abandonment Options, Compound Options
- Timing Options, Solving Timing Options Calculated Using Stochastic Optimization, Switching Options
- Appendix 8A – Stochastic Processes
- Appendix 8B – Differential Equations for a Deterministic Case
- Appendix 8C – Exotic Options Formulae

Chapter Nine: Real Options Valuation's Super Lattice Software

- Introduction to the Real Option Super Lattice Solver Software
- Single Super Lattice Solver (SSLS)
- Multiple Super Lattice Solver (MSLS)
- Multinomial Lattice Solver
- SLS Excel Solution (SSLS, MSLS and Changing Volatility in Excel)
- SLS Functions
- RISK SIMULATOR SOFTWARE
- MONTE CARLO SIMULATION: What is Monte Carlo Simulation?
- Getting Started with Risk Simulator
- Understanding the Forecast Statistics
- FORECASTING: Different Types of Forecasting Techniques
- Running the Forecasting Tool in Risk Simulator
- OPTIMIZATION
- Appendix 9A – Financial Options
- Appendix 9B – Simulation
- Appendix 9C – Forecasting
- Appendix 9D – Optimization

Chapter Ten: Real Options Valuation Application Cases

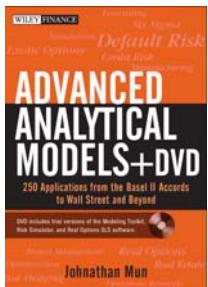

- American, European, Bermudan, and Customized Abandonment Option
- American, European, Bermudan, and Customized Contraction Option
- American, European, Bermudan, and Customized Expansion Option
- Contraction, Expansion, and Abandonment Option
- Basic American, European, and Bermudan Call Options
- Basic American, European, and Bermudan Put Options
- Exotic Chooser Options, Sequential Compound Options
- Multiple-Phased Sequential Compound Option
- Customized Sequential Compound Options
- Path-Dependence, Path Independence, Mutually Exclusive, Non-Mutually Exclusive, and Complex Combinatorial Nested Options
- Simultaneous Compound Option
- American and European Options (Trinomial Lattices)
- American and European Mean-Reversion Option (Trinomial Lattices)
- Jump-Diffusion Option (Quadrinomial Lattices)
- Dual Variable Rainbow Option Using Pentanomial Lattices
- American and European Lower Barrier Options
- American and European Upper Barrier Option
- American and European Double Barrier Options and Exotic Barriers
- American ESO with Vesting Period
- Changing Volatilities and Risk-free Rates Options
- American ESO with Suboptimal Exercise Behavior
- American ESO with Vesting and Suboptimal Exercise Behavior
- American ESO with Vesting, Suboptimal Exercise Behavior, Blackout Periods, and Forfeiture Rate

Chapter Eleven: Real Options Case Studies

- Case I: High-Tech Manufacturing—Build or Buy Decision
- Case II: Financial Options—Convertible Warrants, Vesting, Put Protection
- Case III: Pharmaceutical Development—Value of Perfect Information and Optimal Trigger Values
- Case IV: Oil and Gas—Farm Outs, Options to Defer, Value of Info
- Case V: Valuing Employee Stock Options Under 2004 FAS 123
- Case VI: Integrated Risk Analysis Model—How to Combine Simulation, Forecasting, Optimization, Real Options into a Seamless Risk Model
- Case VII: Biopharmaceutical Industry—Strategic Manufacturing Flexibility
- Case VIII: Alternative Uses for a Proposed Real Estate Development
- Case IX: Naval Special Warfare Group One's Mission Support Center

Chapter Twelve: Results Interpretation and Presentation

- Comparing Real Options Analysis with Traditional Financial Analysis
- The Evaluation Process
- Summary of the Results
- Comparing across Different-Sized Projects
- Comparing Risk and Return of Multiple Projects
- Impact to Bottom Line
- Critical Success Factors and Sensitivity Analysis
- Risk Analysis and Simulation on NPV
- Break-Even Analysis and Payback Periods
- Discount Rate Analysis
- Real Options Analysis Assumptions
- What Are the Next Steps?
- Appendix 10A – Summary of Articles

Advanced Analytical Models: Over 800 Models and 300 Applications from the Basel II Accords to Wall Street and Beyond

Dr. Johnathan Mun

Hard Cover and Cloth: 1,000 Pages

Available on www.amazon.com

ISBN: 9780470179215 (2008)

Advanced Analytical Models is a large collection of advanced models with a multitude of industry and domain applications. The book is based on years of academic research and practical consulting experience, coupled with domain expert contributions. The Modeling Toolkit software that holds all the models, Risk Simulator risk simulation software, and Real Options SLS software were all developed by the author, with over 1,000 functions, tools, and model templates in these software applications. The trial versions are included in the accompanying DVD. The applications covered are vast. Included are Basel II banking risk requirements (credit risk, credit spreads, default risk, value at risk, etc.) and financial analysis (exotic options and valuation), risk analysis (stochastic forecasting, risk-based Monte Carlo simulation, optimization), real options analysis (strategic options and decision analysis), Six Sigma and quality initiatives, management science and statistical applications, and including everything in between, such as applied statistics, manufacturing, operations research, optimization, forecasting, and econometrics.

This book is targeted at practitioners who require the algorithms, examples, models, and insights in solving more advanced and even esoteric problems. This book does not only talk about modeling or illustrate basic concepts and examples; it comes complete with a DVD filled with sample modeling videos, case studies, and software applications to help you get started immediately. In other words, this book dispenses with all the theoretical discussions and mathematical models which are extremely hard to decipher and apply in the real business world. Instead, these theoretical models have been coded up into user-friendly and powerful software, and this book shows the reader how to start applying advanced modeling techniques almost immediately. The trial software applications allow you to access the approximately 300 model templates and 800 functions and tools, understand the concepts, and use embedded functions and algorithms in their own models. In addition, you can get run risk-based Monte Carlo simulations and advanced forecasting methods, and perform optimization on a myriad of situations as well as structure and solve customized real options and financial options problems.

Each model template that comes in the Modeling Toolkit software is described in this book. Descriptions are provided in as much detail as the applications warrant. Some of the more fundamental concepts in risk analysis and real options are covered in the author's other books. It is suggested that these books, *Modeling Risk: Applying Monte Carlo Simulation, Real Options Analysis, Stochastic Forecasting, and Portfolio Optimization* (2006) and *Real Options Analysis, Second Edition* (2005), both published by John Wiley & Sons, be used as references for some of the models in this book. Those modeling issues that are, in the author's opinion, critical, whether they are basic issues or more advanced analytical ones, are presented in detail. As software applications change continually, it is recommended that you check the author's Web site (www.realoptionsvaluation.com) frequently for any analytical updates, software upgrades, and revised or new models.

ABOUT THE AUTHOR

Dr. Johnathan C. Mun is the founder, chairman and CEO of Real Options Valuation, Inc. (ROV), a consulting, training, and software development firm specializing in strategic real options, financial valuation, Monte Carlo simulation, stochastic forecasting, optimization, and advanced analytics located in northern Silicon Valley, California. ROV has partners around the world including Beijing, Chicago, Colombia, Hong Kong, Mexico City, New York, Nigeria, Shanghai, Singapore, Spain, Zurich, and other locations. ROV also has a local office in Shanghai. He is also the chairman of the International Institute of Professional Education and Research (IIPER), an accredited global organization providing the Certified in Risk Management (CRM) designation, among others, staffed by professors from named universities from around the world. He is the creator of multiple software tools including Risk Simulator, Real Options SLS, Modeling Toolkit, Basel II Modeler, ROV Modeler, ROV Optimizer, ROV Valuator, ROV Extractor and Evaluator, ROV Compiler, ROV BizStats, ROV Dashboard, Employee Stock Options Valuation software and others (some of these tools are showcased in this book), as well as the risk analysis Training DVD. He has authored ten books published by John Wiley & Sons and Elsevier Science, including *The Banker's Handbook on Credit Risk* (2008); *Advanced Analytical Models: 250 Applications from Basel II Accord to Wall Street and Beyond* (2008); *Modeling Risk: Applying Monte Carlo Simulation, Real Options, Optimization, and Forecasting* (2006); *Real Options Analysis: Tools and Techniques, First and Second Editions* (2003 and 2005); *Real Options Analysis Course: Business Cases* (2003); *Applied Risk Analysis: Moving Beyond Uncertainty* (2003); and *Valuing Employee Stock Options* (2004). His books and software are being used

at top universities around the world. Dr. Mun is also currently a finance and economics professor and has taught courses in financial management, investments, real options, economics, and statistics at the undergraduate and the graduate MBA levels. He teaches and has taught at universities all over the world, from the U.S. Naval Postgraduate School (Monterey, California) and University of Applied Sciences (Switzerland and Germany) as full professor, to Golden Gate University (California) and San Francisco State University (California) as adjunct professor, and has chaired many graduate research MBA thesis and Ph.D. dissertation committees. He was formerly the Vice President of Analytics at Decisioneering, Inc. Before that, he was a Consulting Manager and Financial Economist in the Valuation Services and Global Financial Services practice of KPMG Consulting and a Manager with the Economic Consulting Services practice at KPMG LLP. He has taught and consulted for over 100 multinational firms (former clients include 3M, Airbus, Boeing, BP, Chevron Texaco, Financial Accounting Standards Board, Fujitsu, GE, Microsoft, Motorola, Pfizer, Timken, U.S. Department of Defense, State and Local Governments, Veritas, and many others). His experience prior to joining KPMG included being department head of financial planning and analysis at Viking Inc. of FedEx, performing financial forecasting, economic analysis, and market research.

Dr. Mun received his PhD in Finance and Economics from Lehigh University, where his research and academic interests were in the areas of investment finance, econometric modeling, financial options, corporate finance, and microeconomic theory. He also has an MBA in business administration, an MS in management science, and a BS in Biology and Physics. He is Certified in Financial Risk Management (FRM), Certified in Financial Consulting (CFC), and Certified in Risk Management (CRM). He is a member of the American Mensa, Phi Beta Kappa Honor Society, and Golden Key Honor Society as well as several other professional organizations, including the Eastern and Southern Finance Associations, American Economic Association, and Global Association of Risk Professionals. In addition, he has written many academic articles published in the Journal of the Advances in Quantitative Accounting and Finance, the Global Finance Journal, the International Financial Review, the Journal of Financial Analysis, the Journal of Applied Financial Economics, the Journal of International Financial Markets, Institutions and Money, the Financial Engineering News, and the Journal of the Society of Petroleum Engineers.

PRAISES FOR REAL OPTIONS ANALYSIS

Advanced Analytical Models contain many powerful and useful applications ranging from R&D strategy valuation and Six Sigma models to risk simulation and strategic options. A must-have book for those starting out in Excel modeling to advanced modelers. An excellent resource for those applying stochastic models for portfolio project prioritization and valuation."

-Dr. Robert Finocchiaro, Technical Director, Corporate R&D Services, The 3M Company

Dr. Johnathan Mun is one of the most gifted teachers of quantitative risk analysis in the history of global finance and business. All of his books combine science, art, intuition, creativity, and above all, they are acutely perceptive, always practical, and provide startling clarity, on the methods and pathways of proper business decision making, when faced with uncertainty. Advanced Analytical Models contains a vast treasure trove of over 800 models, unlike anything ever published in the field. Absolutely groundbreaking...The practical application of the risk models in this book, will keep the rest of us busy, for years to come.

-Brian Watt, CRM, Chief Risk Officer and Chief Financial Officer, GECC

Dr. Mun's expertise in real options and practical modeling methodologies in real world cases is superb, and was used to value technologies in the U.S. military's Improved Engineering Design Process. His approach quantified real net benefits when considering the knowledge reuse on an enterprise scale and his approach is the most powerful when business value is most difficult to quantify.

-Dr. Ali Farsaie, President & CEO, Spatial Integrated Systems, Inc.

"Dr. Mun's latest book is scholarly strong and practically meaningful, by successfully synthesizing all aspects of risk and analytical models and presents them in a well-integrated manner. It is a must-read for both practitioners and students in the field of risk management. The Basel II risk analysis is covered extensively through real examples. With in-depth coverage of the most important and practical models, Dr. Mun's book has set a high standard of publishing in the area of analytical models, risk and decision analysis. The book has significant practical contributions at all levels of risk management. I strongly recommend this book to all readers who want to gain a clear and applied understanding of risk and analytical models.

-Dr. Ehsan Nikbakht, CFA, FRM, PRM, Professor of Finance, Zarb School of Business, Hofstra University, New York

An outstanding collection of important analytic models that span numerous disciplines and can be used in a wide range of industries. The models and their underlying discussion are sound and can be applied as is or modified by the reader for their own applications. The well-written book together with the trial software and models are a powerful combination and provide an exceptional learning opportunity for the reader. This material should be valuable to both analysts and managers who need a sound analytical framework to help them develop and support their decisions.

-Dr. Edmund H. Conrow, CRM, PMP, Risk Management Consultant/Author

Dr. Mun has created 'The Encyclopedia of Models', which addresses a wide-range of cross-industry and cross-enterprise analytical challenges. The models span the spectrum – from simple techniques that one can perform in a few minutes to advanced problems that are tackled in a robust manner. Dr. Mun's new book will show you how to combine analytical methods to point at the right answers. Three words to sum it up: Comprehensive, Lucid, and, Elegant. Every aspiring and accomplished analyst needs to have this book in their library.

-Mark A. Benyovszky, Managing Director, -Zero Delta Center for Enterprise Alignment and Zero Delta University

Risk simulation, binomial lattices, and other computational models have not been within effective reach for many in-the-trenches professionals who did not get this training years ago. Through this book, on top his other books before it, and through his software, Dr. Mun has explained the mysteries, made available the tools, and continues to publish example upon example of how these models can be applied to improve the professional work we've been doing. Once in a while, a new thought leader emerges with a train long enough for the rest of us to ride to attain a new level of professionalism – Dr. Mun is one of these.

-James F. Joyner III, CPA/ABV, CVA, CPC, AIFA, Managing Member, Integra Benefits Consulting LLC

The mechanics of risk and options analyses are simple, but successful real-life application is all about the art of framing which requires constant practice. This book is a framing-fitness work-out through an extraordinary variety of recipes. Framing is not just for modeling, without it, decision making under uncertainties is much harder than it already is. If the answer is not explicit in an example, it is likely to exist as a variant in another – reading them triggered solutions to two commodity related problems that have plagued me for some time.

-Fanton Chuck, Chief Executive Officer, Renova Energy plc

Over the years Johnathan Mun's books have become our corporate bibles with multiple copies in our library. We have recently made the big switch over to Dr. Mun's Modeling Toolkit, Risk Simulator, and Real Options SLS because we found it easier to use while still being more sophisticated and flexible for our needs. "Advanced Analytical Models" is designed to complement the software and is just packed with useful real-life models that are directly applicable to our consulting work. The small refinements such as being able to specify the random number sequence so that you actually can get the same results in a live presentation reflect his sensitivity and understanding of the consulting environment. We have found his Real Options SLS invaluable in helping hospitals understand the different phasing options available to them when contemplating seemingly unreachable \$500M capital projects. Dr. Mun's genius lies in his ability to take extremely complex theory and bring it down to the level that the rest of us can understand and easily apply to our respective fields. Entertaining as always, who ever thought we would get a book on advance analytics that was actually funny! For an industry (healthcare) that increasingly has to forecast 10 and 15 years into the future while still relying on "budget period" analytics and single point estimates, Dr. Mun's book is a "light in the storm." Numerous healthcare examples from queuing theory to methods for analyzing surgical outcomes bring serious analytics into the realm of the practical.

-Lawrence D. Pixley, FACMPE, Founding Partner, Stroudwater Associates

TABLE OF CONTENTS

Part I: Modeling Toolkit and Risk Simulator Applications

Introduction to the Modeling Toolkit Software

Introduction to Risk Simulator

Running a Monte Carlo Simulation

Using Forecast Charts and Confidence Intervals

Correlations and Precision Control

Tornado and Sensitivity Tools in Simulation

Sensitivity Analysis

Distributional Fitting: Single Variable and Multiple Variables

Bootstrap Simulation

Hypothesis Testing

Data Extraction, Saving Simulation Results, and Generating Reports

Regression and Forecasting Diagnostic Tool

Statistical Analysis Tool

Distributional Analysis Tool

Optimization

The Lingo of Optimization

Optimization with Continuous Decision Variables

Optimization with Discrete Integer Variables

Forecasting

Different Types of Forecasting Techniques

1. Analytics – Central Limit Theorem

2. Analytics – Central Limit Theorem – Winning Lottery Numbers

3. Analytics – Flaw of Averages

4. Analytics – Mathematical Integration Approximation Model

5. Analytics – Projectile Motion

6. Analytics – Regression Diagnostics

7. Analytics – Ships in the Night

8. Analytics – Statistical Analysis

9. Analytics – Weighting of Ratios

10. Credit Analysis – Credit Premium

11. Credit Analysis – Credit Risk Analysis and Effects on Prices

12. Credit Analysis – External Debt Ratings and Spread

13. Credit Analysis – Federal Reserve Camels Credit Risk Rating System

14. Credit Analysis – Internal Credit Risk Rating Model

15. Credit Analysis – Profit-Cost Analysis of New Credit

16. Debt Analysis – Asset-Equity Parity Model

17. Debt Analysis – Cox Price and Yield of Risky Debt with Mean Reversion

18. Debt Analysis – Debt Repayment and Amortization

19. Debt Analysis – Debt Sensitivity Models

20. Debt Analysis – Price of Risky Debt with Stochastic Asset and Interest

21. Debt Analysis – Vasicek Debt Option Valuation

22. Debt Analysis – Vasicek Price and Yield of Risky Debt

23. Decision Analysis – Decision Tree Basics

24. Decision Analysis – Decision Tree with EVPI, Minimax and Bayes

25. Decision Analysis – Economic Order Quantity and Inventory Reorder

26. Decision Analysis – Economic Quantity and Optimal Manufacturing

27. Decision Analysis – Expected Utility Analysis

28. Decision Analysis – Inventory Control

29. Decision Analysis – Queuing Models

30. Exotic Options – Accruals on Basket of Assets

31. Exotic Options – American and European Options with Sensitivities

32. Exotic Options – American Call Option on Foreign Exchange

33. Exotic Options – American Call Options on Index Futures

34. Exotic Options – American Call Option with Dividends

35. Exotic Options – Asian Lookback Options using Arithmetic Averages

36. Exotic Options – Asian Lookback Options using Geometric Averages

37. Exotic Options – Asset or Nothing Options

38. Exotic Options – Barrier Options

39. Exotic Options – Binary Digital Options

40. Exotic Options – Cash or Nothing Options

41. Exotic Options – Chooser Option (Simple Chooser)

42. Exotic Options – Chooser Option (Complex Chooser)

43. Exotic Options – Commodity Options

44. Exotic Options – Currency (Foreign Exchange) Options

45. Exotic Options – Double Barrier Options

46. Exotic Options – European Call Option with Dividends

47. Exotic Options – Exchange Assets Option

48. Exotic Options – Extreme Spreads Option

49. Exotic Options – Foreign Equity Linked Foreign Exchange Options

50. Exotic Options – Foreign Equity Struck in Domestic Currency

51. Exotic Options – Foreign Equity with Fixed Exchange Rate

52. Exotic Options – Foreign Takeover Options

53. Exotic Options – Forward Start Options

54. Exotic Options – Futures and Forward Options

55. Exotic Options – Gap Options

56. Exotic Options – Graduated Barrier Options

57. Exotic Options – Index Options

58. Exotic Options – Inverse Gamma Out-of-the-Money Options

59. Exotic Options – Jump Diffusion Options

60. Exotic Options – Leptokurtic and Skewed Options

61. Exotic Options – Lookback with Fixed Strike (Partial Time)

62. Exotic Options – Lookback with Fixed Strike

63. Exotic Options – Lookback with Floating Strike (Partial Time)

64. Exotic Options – Lookback with Floating Strike

65. Exotic Options – Min and Max of Two Assets

66. Exotic Options – Options on Options

67. Exotic Options – Option Collar

68. Exotic Options – Perpetual Options

69. Exotic Options – Range Accruals (Fairway Options)

70. Exotic Options – Simple Chooser

71. Exotic Options – Spread on Futures

72. Exotic Options – Supershare Options

73. Exotic Options – Time Switch Options

74. Exotic Options – Trading Day Corrections

75. Exotic Options – Two Asset Barrier Options

76. Exotic Options – Two Asset Cash or Nothing

77. Exotic Options – Two Correlated Assets Option

78. Exotic Options – Uneven Dividend Payments Option

79. Exotic Options – Writer Extendible Option

80. Forecasting – Data Diagnostics

81. Forecasting – Econometric, Correlations and Multiple Regression

82. Forecasting – Exponential J-Growth Curves

83. Forecasting – Forecasting Manual Computations

84. Forecasting – Linear Interpolation

85. Forecasting – Logistic S-Growth Curves

86. Forecasting – Markov Chains and Market Share

87. Forecasting – Multiple Regression

88. Forecasting – Nonlinear Extrapolation and Forecasting

89. Forecasting – Stochastic Processes
 90. Forecasting – Time-Series ARIMA
 91. Forecasting – Time-Series Analysis
 92. Industry Applications—Biotech Manufacturing Strategy
 93. Industry Applications—Biotech In-licensing Drug Deal Structuring
 94. Industry Applications—Biotech Investment Valuation
 95. Industry Application—Banking: Integrated Risk Management, Default Probability, Economic Capital, Value at Risk, Optimal Portfolios
 96. Industry Application—Electric/Utility: Optimal Contract Portfolios
 97. Industry Application—IT: Information Security Intrusion Management
 98. Industry Applications—Insurance ALM Model
 99. Industry Applications—Pensions: Closed Group Portfolio Matching
 100. Industry Applications—Pensions: Accounting Modeling Optimization
 101. Operational Risk – Queuing Models at Bank Branches
 102. Optimization – Continuous Portfolio Allocation
 103. Optimization – Discrete Project Selection
 104. Optimization – Inventory Optimization
 105. Optimization – Investment Portfolio Allocation
 106. Optimization – Military Portfolio and Efficient Frontier
 107. Optimization – Optimal Pricing with Elasticity
 108. Optimization – Optimization of a Harvest Model
 109. Optimization – Optimizing Ordinary Least Squares
 110. Optimization – Stochastic Portfolio Allocation
 111. Options Analysis – Binary Digital Instruments
 112. Options Analysis – Inverse Floater Bond
 113. Options Analysis – Options Adjusted Spreads on Debt
 114. Options Analysis – Options Adjusted Spreads Lattice Maker
 115. Options Analysis – Options on Debt
 116. Options Analysis – Stepped Up Callable Debt
 117. Options Analysis – 5 Plain Vanilla Options
 118. Probability of Default – Empirical Model
 119. Probability of Default – External Options Model (Public Company)
 120. Probability of Default – Merton Internal Model (Private Company)
 121. Probability of Default – Merton Market Model (Industry Comps)
 122. Project Management – Cost Estimation Model
 123. Project Management – Critical Path Analysis (CPM PERT GANTT)
 124. Project Management – Project Timing
 125. Real Estate – Commercial Real Estate ROI
 126. Risk Analysis – Integrated Risk Analysis
 127. Risk Analysis – Interest Rate Risk
 128. Risk Analysis – Portfolio Risk Return Profiles
 129. Risk Hedging – Delta-Gamma Hedging
 130. Risk Hedging – Delta Hedging
 131. Risk Hedging – Effects of Fixed versus Floating Rates
 132. Risk Hedging – Foreign Exchange Cash Flow Model
 133. Risk Hedging – Hedging Foreign Exchange Exposure
 134. Sensitivity – Greeks
 135. Sensitivity – Tornado and Sensitivity Charts Linear
 136. Sensitivity – Tornado and Sensitivity Nonlinear
 137. Simulation – Basic Simulation Model
 138. Simulation – Best Surgical Team
 139. Simulation – Correlated Simulation
 140. Simulation – Correlation Effects Model
 141. Simulation – Data Fitting
 142. Simulation – Debt Repayment and Amortization
 143. Simulation – Demand Curve and Elasticity Estimation
 144. Simulation – Discounted Cash Flow, ROI and Volatility Estimates
 145. Simulation – Infectious Diseases
 146. Simulation – Recruitment Budget (Negative Binomial Simulation)
 147. Simulation – Retirement Funding with VBA Macros
 148. Simulation – Roulette Wheel
 149. Simulation – Time Value of Money
 150. Six Sigma – Design of Experiments and Combinatorics
 151. Six Sigma – Hypothesis Testing and Bootstrapping
 152. Six Sigma – Sample Size Determination
 153. Six Sigma – Statistical and Unit Capability Measures
 154. Valuation – Buy versus Lease
 155. Valuation – Classified Loan Borrowing Base
 156. Valuation – Break Even Inventory: Seasonal Lending Trial Balance
 157. Valuation – Firm in Financial Distress
 158. Valuation – Pricing Loan Fees Model
 159. Valuation – Simulation and Valuation
 160. Value at Risk – Optimized and Simulated Portfolio VaR
 161. Value at Risk – Options Delta Portfolio VaR
 162. Value at Risk – Portfolio and Credit Risk VaR Capital Adequacy
 163. Value at Risk – Right Tail Capital Requirements
 164. Value at Risk – Static Covariance Method
 165. Volatility – Implied Volatility
 166. Volatility – Volatility Computations
 167. Yield Curve – CIR Model
 168. Yield Curve – Curve Interpolation BIM Model
 169. Yield Curve – Curve Interpolation NS Model
 170. Yield Curve – Forward Rates from Spot Rates
 171. Yield Curve – Term Structure of Volatility
 172. Yield Curve – U.S. Treasury Risk-free Rates
 173. Yield Curve – Vasicek Model
- Part II: Real Options SLS Applications**
174. Introduction to the SLS Software
 Single Asset and Single Phased Module
 Multiple Assets or Multiple Phased SLS Module
 Multinomial SLS Module
 SLS Excel Solution Module
 SLS Excel Solution Module
 SLS Excel Solution Module
175. Employee Stock Options – Simple American Call Option
 176. Employee Stock Options – Simple Bermudan Call Option with Vesting
 177. Employee Stock Options – Simple European Call Option
 178. Employee Stock Options – Suboptimal Exercise
 179. Employee Stock Options – Vesting, Blackout, Suboptimal, Forfeiture
180. Exotic Options – American and European Lower Barrier Options
 181. Exotic Options – American and European Upper Barrier Option
 182. Exotic Options – American and European Double Barrier Options
 183. Exotic Options – Basic American, European, and Bermudan Call
 184. Exotic Options – Basic American, European, and Bermudan Put
185. Real Options – American, European, Bermudan, and Customized
 Real Options – Abandonment American Option
 Real Options – Abandonment European Option
 Real Options – Abandonment Bermudan Option
 Real Options – Abandonment Customized Option
186. Real Options – American, European, Bermudan, and Customized
 Contraction Option
 Real Options – Contraction American and European Option
 Real Options – Contraction Bermudan Option
 Real Options – Contraction Customized Option
187. Real Options – American, European Customized Expansion Option
 188. Real Options – Contraction, Expansion, and Abandonment Option
 189. Real Options – Dual Variable Rainbow Option Using Pentanomials
 190. Real Options – Exotic Chooser Options
 191. Real Options – Exotic Complex Floating American/European Chooser
 192. Real Options – Jump-Diffusion Option Using Quadratnomial Lattices
 193. Real Options – Mean Reverting Calls and Puts using Trinomial Lattices
 194. Real Options – Multiple Assets Competing Options
 195. Real Options – Path-Dependent, Path-Independent, Mutually Exclusive, Non-Mutually Exclusive & Complex Combinatorial Nested Options
 196. Real Options – Sequential Compound Options
 Real Options – Simple Two Phased Sequential Compound Option
 Real Options – Multiple-Phased Sequential Compound Option
 Real Options – Multiple-Phased Complex Sequential Compounds
197. Real Options – Simultaneous Compound Options
 Real Options – Two Phased Simultaneous Compound Option
 Real Options – Multiple-Phased Simultaneous Compound Option
 198. Real Options – Simple Calls and Puts using Trinomial Lattices

 201. Real Options Strategic Cases – Pharmaceutical Development: Value of Perfect Information and Optimal Trigger Values
 202. Real Options Strategic Cases – Option to Switch Inputs
 203. Valuation – Convertible Warrants (Vesting Period and Put Protection)
- Appendix 1: List of Models**
- Appendix 2: List of Functions**
- Appendix 3: Glossary**

This book covers the following applications:

Modeling Toolkit

- Over 800 functions, models and tools and over 300 Excel and SLS templates
- Covering the following applications:
 - Business analytics and statistics (CDF, ICDF, PDF, data analysis, integration)
 - Credit and Debt Analysis (credit default swap, credit spread options, credit rating, debt options and pricing)
 - Decision Analysis (decision tree, Minimax, utility functions)
 - Exotic Options (over 100 types of financial and exotic options)
 - Forecasting (ARIMA, econometrics, EWMA, GARCH, nonlinear extrapolation, spline, time-series)
 - Industry Applications (banking, biotech, insurance, IT, real estate, utility)
 - Operations Research and Portfolio Optimization (continuous, discrete, integer)
 - Options Analysis (BDT interest lattices, debt options, options trading strategies)
 - Portfolio Models (investment allocations, optimization, risk and return profiles)
 - Probability of Default and Banking Credit Risk (private, public and retail debt, credit derivatives and swaps)
 - Real Options Analysis (over 100 types: abandon, barrier, contract, customized, dual asset, expand, multi-asset, multi-phased, sequential, switch)
 - Risk Hedging (delta and delta-gamma hedges, foreign exchange and interest rate risk)
 - Risk Simulation (correlated simulation, data fitting, Monte Carlo simulation, risk-simulation)
 - Six Sigma (capability measures, control charts, hypothesis tests, measurement systems, precision, sample size)
 - Statistical Tools (ANOVA, Two-Way ANOVA, nonparametric hypotheses tests, parametric tests, principal components, variance-covariance)
 - Valuation (APT, buy versus lease, CAPM, caps and floors, convertibles, financial ratios, valuation models)
 - Value at Risk (static covariance and simulation-based VaR)
 - Volatility (EWMA, GARCH, implied volatility, Log Returns, Real Options Volatility, probability to volatility)
 - Yield Curve (BIS, Cox, Merton, NS, spline, Vasicek)

Risk Simulator

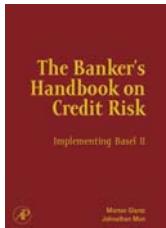

- Over 25 statistical distributions
- Covering the following applications:
 - Applied Business Statistics (descriptive statistics, CDF/ICDF/PDF probabilities, stochastic parameter calibration)
 - Bootstrap Simulation and Hypothesis Testing (testing empirical and theoretical moments)
 - Correlated Simulations (simulation copulas and Monte Carlo)
 - Data Analysis and Regression Diagnostics (heteroskedasticity, multicollinearity, nonlinearity, outliers)
 - Forecasting (J-S curves, Markov chains, multivariate regressions, stochastic processes)
 - Optimization (static, dynamic, stochastic)
 - Sensitivity Analysis (correlated sensitivity, scenario, spider, tornado)

Real Options SLS

- Fully Customizable Binomial, Trinomial, Quadrinomial and Pentanomial Lattices
- Lattice Makers (simulated lattices)
- Super fast super lattice algorithms (running thousands on lattice steps in seconds)
- Covering the following applications:
 - Exotic Options Models (barriers, benchmarked, multiple assets, portfolio options)
 - Financial Options Models (3D dual asset exchange, single and double barriers)
 - Real Options Models (abandon, barrier, contract, expand, sequential compound, switching)
 - Specialized Options (mean-reverting, jump-diffusion, and dual asset rainbows)

Employee Stock Options Valuation Toolkit

- Applied by the U.S. Financial Accounting Standards Board for FAS 123R 2004
- Binomial and closed-form models
- Covers:
 - Blackout Periods
 - Changing Volatility
 - Forfeiture Rates
 - Suboptimal Exercise Multiple
 - Vesting

The Banker's Handbook on Credit Risk: Implementing Basel II

Morton Glantz & Johnathan Mun
Hard Cover and Cloth, 420 Pages
Available at www.amazon.com
ISBN: 9780123736666 (2008)

Much literature has been published on banking—and for bankers. The authors tell us how to derive clients' cash flows and financial needs but not how to model value drivers with the latest technology. They advise us how to analyze financial alternatives and choose what appears the best decision but not how to create choices germinal in a client's corporate data. They refer us to quantitative objective functions and many formulae. They do not give us the means to run up stochastic solutions, quickly and easily and thereby improve chances of ever being able to explain, qualitatively, optimal objectives on which any assessment of loss reserves, risk adjusted pricing and capital allocation must reside. They provide macrostructures but not how micro processes work, such as leveraging the latest stochastic technology to improve credit-decision making. Thanks in part to Basel II—in the last few years, we have seen banking evolve from a casual discipline to a rigorous science. Just over a decade or so ago, technologies in the banking business such as neural nets, stochastic optimization, simulation, fuzzy logic, and data mining were still largely exploratory and at best quite tentative. Algorithms, as a term, rested on the outskirts of financial thought. More than a few bankers had not even heard of Monte Carlo outside of casinos and travel magazines. Machine learning was in its infancy while migration risk, default frequencies concepts were encased in the Stone Age logic of ratios, deterministic forecasts, rudimentary cash flows, and on more than a few occasions, front page accounting shenanigans. Yet, the concern is that some bankers are resisting computer-actualized solutions and are under the wrong impression the past will satisfy (Basel II) compliance. Quantitative methods, such as the use of advanced models or even the use of math, do not alarm sharp banking professionals. Modeling tools are not black boxes that ignore or inhibit wisdom or that mechanize the loan approval process. However, in many financial institutions, models and, for that matter, change may intimidate banking professionals, inhibiting technological growth and, alas, the requisite skills to participate in strategic Basel II decision making at the highest level. Otherwise capable bankers find it difficult to creatively deploy sophisticated modeling techniques to crystallize value drivers, explain optimal capital allocation strategies, and otherwise deliver the goods to their boss or to money committee. Knowledge gaps, particularly when it comes to the new world of banking are detrimental to continued growth both within the institution and in advancing one's career.

The hands-on applications covered in this book are vast, including areas of Basel II banking risk requirements (credit risk, credit spreads, default risk, value at risk, market risk, and so forth) and financial analysis (exotic options and valuation), to risk analysis (stochastic forecasting, risk-based Monte Carlo simulation, portfolio optimization) and real options analysis (strategic options and decision analysis). This book is targeted at banking practitioners and financial analysts who require the algorithms, examples, models, and insights in solving more advanced and even esoteric problems. This book does not only talk about modeling or illustrates some basic concepts and examples, but comes complete with a DVD filled with sample modeling videos, case studies, and software applications to help the reader get started immediately. The various trial software applications included allows the reader to quickly access the approximately 8000 modeling functions and tools, 250 analytical model templates, and powerful risk-based simulation software to help in the understanding and learning of the concepts covered in the book, and also to use the embedded functions and algorithms in their own models. In addition, the reader can get started quickly in running risk-based Monte Carlo simulations, run advanced forecasting methods, and perform optimization on a myriad of situations, as well as structure and solve customized real options and financial options problems. This book is unique in that it is a handbook or application-based book, and the focus is primarily to help the reader hit the ground running, and not delve into the theoretical structures of the models where there are a plethora of mathematical modeling and theory-laden books without any real hands-on applicability. Indeed, this book should help you carry out your decision making tasks more succinctly and might even empower you to grab the modeling hardball and to pitch winning games in a domain that is hot, dynamic, complex, and often combative.

ABOUT THE AUTHORS

Prof. Morton Glantz is a world renowned scholar in international banking and risk management. He serves as a financial advisor and educator to a broad spectrum of professionals, including corporate financial executives, government ministers, privatization managers, investment and commercial bankers, public accounting firms, members of merger and acquisition teams, strategic planning executives, management consultants, attorneys and representatives of foreign governments and international banks. As a senior officer of JP Morgan Chase, he built a progressive career path specializing in credit analysis and credit risk management, risk grading systems, valuation models and professional training. He was instrumental in the reorganization and development of the credit analysis module of the Bank's Management Training Program Finance, acknowledged at the time as one of the foremost training programs in the banking industry. A partial list of client companies Morton has worked with includes, Institutional Investor, The Development Bank of Southern Africa, CUCORP, Canada, The Bank of China, GE Capital, Cyprus Development Bank, Decisioneering, Iran Development Bank (Cairo), Gulf Bank (Kuwait), Institute for International Research (Dubai), Inter-American Investment Corporation, Ernst & Young, Euromoney, ICICI Bank (India), Council for Trade and

Economic Cooperation (Russia), BHF Bank and IBM Credit Corporation. Morton is on the finance faculty at the Fordham Graduate School of Business. He has appeared in Harvard University International Directory of Business and Management Scholars and Research and earned Fordham University Deans Award for Faculty Excellence on three occasions. Professor Glantz is a Board Member, International Standards Board, International Institute of Professional Education and Research (IIPER). The International Institute of Professional Education and Research (IIPER) is a global institute with partners and offices around the world including the United States, Switzerland, Hong Kong, Mexico, Portugal, Singapore, Nigeria, Malaysia, and others. Professor Glantz is widely published in financial journals and authored 6 books including *Banker's Handbook on Credit Risk* (Elsevier 2008), *Credit Derivatives: Techniques to Manage Credit Risk for Financial Professionals*, (with Erik Banks and Paul Siegel), (McGraw Hill 2006), *Optimal Trading Strategies*, with Robert Kissell (AMACOM 2003), *Managing Bank Risk: An Introduction to Broad-Based Credit Engineering*, Academic Press/Elsevier (2002) RISKBOOK.COM Award: Best Finance Books of 2003, *Scientific Financial Management* (AMACOM 2000); *Loan Risk Management* (McGraw Hill, 1995).

Dr. Johnathan C. Mun is the founder, chairman and CEO of Real Options Valuation, Inc. (ROV), a consulting, training, and software development firm specializing in strategic real options, financial valuation, Monte Carlo simulation, stochastic forecasting, optimization, and advanced analytics located in northern Silicon Valley, California. ROV has partners around the world including Beijing, Chicago, Colombia, Hong Kong, Mexico City, New York, Nigeria, Shanghai, Singapore, Spain, Zurich, and other locations. ROV also has a local office in Shanghai. He is also the chairman of the International Institute of Professional Education and Research (IIPER), an accredited global organization providing the Certified in Risk Management (CRM) designation, among others, staffed by professors from named universities from around the world. He is the creator of multiple software tools including Risk Simulator, Real Options SLS, Modeling Toolkit, Basel II Modeler, ROV Modeler, ROV Optimizer, ROV Valuator, ROV Extractor and Validator, ROV Compiler, ROV BizStats, ROV Dashboard, Employee Stock Options Valuation software and others (some of these tools are showcased in this book), as well as the risk analysis Training DVD. He has authored ten books published by John Wiley & Sons and Elsevier Science, including *The Banker's Handbook on Credit Risk* (2008); *Advanced Analytical Models: 250 Applications from Basel II Accord to Wall Street and Beyond* (2008); *Modeling Risk: Applying Monte Carlo Simulation, Real Options, Optimization, and Forecasting* (2006); *Real Options Analysis: Tools and Techniques*, First and Second Editions (2003 and 2005); *Real Options Analysis Course: Business Cases* (2003); *Applied Risk Analysis: Moving Beyond Uncertainty* (2003); and *Valuing Employee Stock Options* (2004). His books and software are being used at top universities around the world. Dr. Mun is also currently a finance and economics professor and has taught courses in financial management, investments, real options, economics, and statistics at the undergraduate and the graduate MBA levels. He teaches and has taught at universities all over the world, from the U.S. Naval Postgraduate School (Monterey, California) and University of Applied Sciences (Switzerland and Germany) as full professor, to Golden Gate University (California) and San Francisco State University (California) as adjunct professor, and has chaired many graduate research MBA thesis and Ph.D. dissertation committees. He was formerly the Vice President of Analytics at Decisioneering, Inc. Before that, he was a Consulting Manager and Financial Economist in the Valuation Services and Global Financial Services practice of KPMG Consulting and a Manager with the Economic Consulting Services practice at KPMG LLP. He has taught and consulted for over 100 multinational firms (former clients include 3M, Airbus, Boeing, BP, Chevron Texaco, Financial Accounting Standards Board, Fujitsu, GE, Microsoft, Motorola, Pfizer, Timken, U.S. Department of Defense, State and Local Governments, Veritas, and many others). His experience prior to joining KPMG included being department head of financial planning and analysis at Viking Inc. of FedEx, performing financial forecasting, economic analysis, and market research. Dr. Mun received his PhD in Finance and Economics from Lehigh University, where his research and academic interests were in the areas of investment finance, econometric modeling, financial options, corporate finance, and microeconomic theory. He also has an MBA in business administration, an MS in management science, and a BS in Biology and Physics. He is Certified in Financial Risk Management (FRM), Certified in Financial Consulting (CFC), and Certified in Risk Management (CRM). He is a member of the American Mensa, Phi Beta Kappa Honor Society, and Golden Key Honor Society as well as several other professional organizations, including the Eastern and Southern Finance Associations, American Economic Association, and Global Association of Risk Professionals. In addition, he has written many academic articles published in the Journal of the Advances in Quantitative Accounting and Finance, Global Finance Journal, International Financial Review, Journal of Financial Analysis, the Journal of Applied Financial Economics, the Journal of International Financial Markets, Institutions and Money, Financial Engineering News, and Journal of the Society of Petroleum Engineers.

PRAISES FOR THE BANKER'S HANDBOOK

What sets Dr. Johnathan Mun's work apart from other writers and practitioners of quantitative risk analysis, is its startling clarity and real practical application to both the real world of risk analysis, and the processes by which we must make decisions under uncertainty. At GECC, we use both Dr. Mun's Risk Simulator and his Real Options software. Every book he has ever written is lined up within easy reach on my office bookshelf. His latest book, written with Morton Glantz, a well-known scholar in International Banking and Risk Management, is another gem. Read "The Banker's Handbook on Credit Risk" to see what two of the most original thinkers in quantitative risk analysis in the world today have to say about credit risk.

Brian Watt, CRM, Chief Financial Officer and Chief Risk Officer, GECC

The Banker's Handbook on Credit Risk is an indispensable reference for bankers and others concerned with credit risk to understand how to fully and properly utilize models in the management of credit risk. The comprehensive combination of explanatory text and over 150 working models in the book and accompanying DVD make it a key reference book for bankers. Most importantly, use of this Handbook and its accompanying models will move us forward in achieving sorely needed improvement in the management and regulatory oversight of credit risk in the financial system."

George J. Vojta, Chairman and CEO, The Westchester Group

TABLE OF CONTENTS

CHAPTER 1 – Basel II and Principles for the Management of Credit Risk

- Features of Basel II Pillar 1
- Standardized Approach to Credit Risk
- Foundation Internal Ratings Approach
- Summary of Pillar 2
- Summary of Pillar 3
- Modeling Toolkit and Basel II

CHAPTER 2 – International Financial Reporting Standards and Basel II

- IASB Requirements
- Off-Balance Sheet Requirements
- A Banker's Guide: Uncover Shenanigans
- Creative Accounting

CHAPTER 3 – Decomposing Cash Flow: A Bankers Primer

- Indirect Method of Cash Reporting
- Direct Method of Reporting Cash
- Financing Activities
- Enron's Cash Flow Decomposition

CHAPTER 4 – Step-By-Step in Getting Started with the Modeling Toolkit and Risk Simulator Software Applications

- Introduction to the Modeling Toolkit Software
- Introduction to Risk Simulator
- Running a Monte Carlo Simulation
- Using Forecast Charts and Confidence Intervals
- Correlations and Precision Control
- The Effects of Correlations in Monte Carlo Simulation
- Tornado and Sensitivity Tools in Simulation
- Sensitivity Analysis Distributional Fitting: Single Variable and Multiple Variables
- Bootstrap Simulation
- Data Extraction, Saving Simulation Results, and Generating Reports
- Regression and Forecasting Diagnostic Tool
- Statistical Analysis Tool
- Distributional Analysis Tool

CHAPTER 5 – Analytical Forecasting and Cash Flow Projections

- Statistical Forecasting
- Advanced Analytical Forecasting with Risk Simulator
- Time-Series Analysis
- Multivariate Regression
- Stochastic Forecasting
- Nonlinear Extrapolation
- Box-Jenkins ARIMA
- Sensitivity Financial Forecasting

CHAPTER 6 – Using Risk Simulator Optimization and Valuation Software to Evaluate the Credit Risk of Corporate Restructuring

- Business Case

CHAPTER 7 – Analytical Techniques for Modeling Probability of Default, Loss Given Default, Economic Capital, Value at Risk, Portfolio Optimization, Hurdle Rates and Required Rates of Return

- Probability of Default
- Structural Models on Probability of Default
 - Public Firms
 - Private Firms
- Empirical Models on Probability of Default
 - Retail Loans
- Loss Given Default and Expected Losses
- Economic Capital and Value at Risk
 - Structural VaR Models
 - Monte Carlo Risk Simulation VaR Models
- Optimization of Portfolio Value at Risk
- Hurdle Rates and Required Rates of Return

CHAPTER 8 – Portfolio Optimization

- What is Optimization
- The Lingo of Optimization
- Optimization Procedures
- Running an Optimization
- Discrete Project Selection
- Investment Portfolio Allocation

CHAPTER 9 – Loan Pricing and Pricing Model Construction

- Loan Pricing Models
- Stochastic Net Borrowed Funds Pricing Model
- Deterministic to Stochastic Pricing Solution

CHAPTER 10 – Bankers Primer on Shareholder Value

- Methods to Determine Value
- Valuation Software

CHAPTER 11 – A Bankers Guide: Valuation Appraisal of Business Clients

- Valuation Appraisals
- Valuation Appraisal Toolkit

CHAPTER 12 – Constructing Industry Specific Credit Rating Systems

- The Structure of a Credit Risk Grading System
- Risk Rating Computer Tutorial

CHAPTER 13 – Building Integrated Exposure Systems

- Tier One
- Tier Two
- Data Architecture
- Data Marts and Databases

CHAPTER 14 – Credit Risk Rating and Debt Analysis (Credit Premium and Debt Options)

- Credit Analysis and Credit Premium
- Pricing Effects of Credit Risk
- Internal Credit Risk Rating Model
- Profit-Cost Analysis of New Credit
- Asset-Equity Parity Model
- Valuation of Risky Debt with Mean-Reverting Processes
- Debt Repayment and Amortization
- Valuation of Risky Debt and Yield Curve

CHAPTER 15 – Interest Rate Risk, Foreign Exchange Risk, Volatility Estimation, Risk Hedging, Yield Curve Forecasting, and Advanced Forecasting Techniques

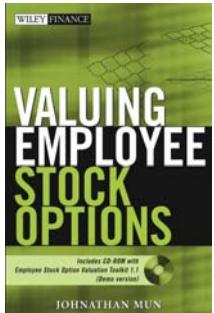

- Interest Rate Risk
- Portfolio Risk and Return Profiles
- Delta-Gamma Risk Hedging
- Fixed versus Floating Interest Rates and Swaps
- Foreign Exchange Cash Flow Model
- Hedging Foreign Exchange Exposure Risk
- Volatility Computations
 - Implied Volatility
 - Log Cash Flow and Stock Returns Approach
 - Exponentially Weighted Moving Average (EWMA)
 - Log Present Value Approach
 - Management Assumptions
 - GARCH Modeling
- Yield Curve Modeling
 - Cox-Ingersoll-Rubinstein Model
 - Bliss Interpolation
 - Curve Spline Interpolation and Extrapolation
 - Forward Rates
 - Term Structure of Volatility
 - Vasicek Model with Mean-Reversion
 - Stochastic Forecasting of Interest Rates
 - ARIMA Modeling
 - Time-Series Forecasting

CHAPTER 16 – Exotic Options and Credit Derivatives

- Accruals on Basket of Assets
- American Call Option on reign Exchange
- Barrier Options
- Binary Digital Options
- Commodity Options
- Currency and Foreign Exchange Options
- Extreme Spread Options
- Foreign Equity Linked Options
- Perpetual Options
- Range Accrual Options
- Inverse Floater Bonds
- Options Adjusted Spreads on Bonds
- Solving Plain Vanilla Options

APPENDIX 1 – Getting Started with Real Options SLS Software Application on Modeling Customizable Exotic and Real Options

- Single Asset and Single Phased Module
- Multiple Asset or Multiple Phased SLS Module
- Multinomial SLS Module
- SLS Excel Solution Module
- SLS Excel Functions Module
- SLS Lattice Maker Module

Valuing Employee Stock Options: Under 2004 FAS 123 Proposals (CD-ROM Included)

PREFACE

This book was written after FASB released its Proposed FAS 123 Revisions in March 2004. As one of the valuation consultants and FASB advisors on the FAS 123 initiative in 2003 and 2004, I would like to illustrate to the finance and accounting world that what FASB has proposed is actually pragmatic and applicable. I am neither for nor against the expensing of employee stock options and would recuse myself from the philosophical and sometimes emotional debate on whether employee stock options should be expensed (that they are a part of an employee's total compensation, paid in part for the exchange of services, and are an economic opportunity cost to the firm just like restricted stocks or other contingent claims issued by the company) or should not be expensed (that they simply dilute the holdings of existing shareholders, is a cashless expense, and if expensed, provides no additional valuable information to the general investor as to the financial health of the company but reduces the company's profitability and hence the ability to continue issuing more options to its employees). Rather, as an academic and valuation expert, my concern is with creating a universal standard of understanding on how FAS 123 can be uniformly applied to avoid ambiguity, and not whether employee stock options should be expensed. Therefore, let it not be said that the new ruling is abandoned because it is not pragmatic. This book is also my response to FASB board member Katherine Schipper's direct request to myself at the FASB public panel roundtable meeting (Palo Alto, California, June 2004) for assistance in providing more guidance on the overall valuation aspects of FAS 123.

Hopefully the contents of this book will subdue some of the criticisms on how binomial lattices can be used and applied in the real world. The results, tables, graphics, and sample cases illustrated throughout the book were calculated using customized binomial lattice software algorithms I developed to assist FASB in its deliberations, and were based on actual real-life consulting and advisory experience on applying FAS 123. Inexperienced critics will be surprised at some of the findings in the book. For instance, criticisms on the difficulty of finding the highly critical volatility may be unfounded because when real-life scenarios such as vesting, forfeitures, and suboptimal exercise behavior are added to the model, volatility plays a much smaller and less prominent role. In addition, the book illustrates how Monte Carlo simulation with correlations can be added (to simulate volatility, suboptimal exercise behavior multiple, forfeiture rates, as well as other variables for thousands and even hundreds of thousands of simulation scenarios and trials) to provide a precision of up to \$0.01 at a 99.9 percent statistical confidence, coupled with a convergence test of the lattice steps, provides a highly robust modeling methodology. Future editions of this book will include any and all changes to the FAS 123 requirements since the March 2004 proposal. Parts One and Four are written specifically for the chief financial officer and finance directors, who are interested in understanding what are the impacts and implications of using a binomial lattice versus a Black-Scholes model. Parts Two and Three are targeted more toward the analysts, consultants, and accountants who require the technical knowledge and example cases to execute the analysis.

PRAISES FOR REAL OPTIONS ANALYSIS

"Veritas has modeled the valuation of its employee stock options for analytical purposes using a proprietary customized binomial lattice, developed by Dr. Johnathan Mun. The valuation based on the customized binomial lattice model allows us to take into account the impacts of multiple vesting periods, employee suboptimal exercise behavior, forfeiture rates, changing risk-free rates, and changing volatilities over the life of the option which are required under the 2004 FAS 123 issued by the Financial Accounting Standards Board. It is not possible to consider these factors in a valuation based on the traditional modified Black-Scholes model. Under the assumptions used by Veritas when modeling the valuation of employee stock option grants both based on the customized binomial lattice model as well as the traditional modified Black-Scholes model, the customized binomial lattice model resulted in a considerably lower expense, considering the expensing guidelines as included in the FAS 123 Proposed Statement."

Don Rath, Vice President of Tax and Stock Administration
Veritas Software Corporation

"This is one of those rare books written in anticipation of a major shift in the industry and economy. FAS 123 will throw a lot of public companies in a frantic, however the smart ones are identifying the opportunity to master the process and take over the driving seat. The methodology and the tools developed by Dr. Johnathan Mun are proven, pragmatic, and offer a great deal of value and benefit to those early adopters. IBCOL Consulting AG is using Dr. Mun's algorithms and methodology because of their applicability, accuracy, and the fair-market values that we have obtained for our clients are significantly less than traditional Black-Scholes models."

Dr. Markus Junginger
Managing Partner, IBCOL Consulting

"After extensive review of the FASB exposure draft and consideration of a variety of option valuation methodologies, E*TRADE FINANCIAL has decided to implement a binomial lattice model in Equity Edge, our stock plan management and reporting software, in consultation with Dr. Johnathan Mun. We found Dr. Mun's work on employee stock option pricing very valuable."

Naveen Agarwal
Director, Product Management, E*TRADE FINANCIAL Corporate Services

Real Options Analysis Course: Business Cases and Software Applications

Dr. Johnathan Mun

ISBN: 0471430013 (2003)

Hard Cover and Cloth 360 Pages

Available on www.wiley.com Keyword:
JOHNATHAN MUN

The *Real Options Analysis Course* (Wiley Finance March 2003) is now available on the Amazon web site. The book follows the lecture seminars: "Real Options for Managers" and "Real Options for Analysts" that the author has held worldwide. This is a follow-up to Mun's previous book, "*Real Options Analysis: Tools and Techniques for Valuing Strategic Investments and Decisions*." Read the book written by the same person who created the software and have taught, advised and consulted on the applications of real options at multiple firms worldwide. The book includes a CD-ROM of the Real Options Analysis Toolkit limited edition software, Crystal Ball® Monte Carlo simulation trial software, OptQuest stochastic optimization software, and a series of Excel worksheet models ranging from chapter problems and cases to forecast simulation and resource optimization models. The book is written with the analyst and finance student in mind. The case studies and step-by-step problems (and associated answers for faculty download) coupled with the theories in the first book provide a comprehensive course in using Real Options in the real world, with the relevant software applications.

PREFACE

This book was written with the corporate financial analyst and finance student in mind. Real Options Course's business cases, exercises, step-by-step methodologies and applications have been adapted for and solved using the enclosed Real Options Analysis Toolkit software (limited edition) CD-ROM. It is assumed that the reader has familiarity with real options concepts as outlined in Mun's previous book, *Real Options Analysis* (Wiley Finance, 2002), as some of the more important concepts overlap between these books. As in the first book, the focus is on the ease of use and pragmatic applications of real options and forgoes many of the theoretical concepts. The idea is to demystify the black-box analytics in real options and to make transparent its concepts, methodologies and applications. Rather than relying on stochastic Ito calculus, variance reduction, numerical methods, differential equations or stochastic path-dependent simulations to solve real options problems, this book instead relies heavily on binomial lattices, which is shown time and again to be reliable and produce identical results, at the limit, to the former approaches. While it is extremely easy to modify binomial lattices depending on the real options or to more accurately mirror the intricacies of actual business cases, it is extremely difficult to do so using the more advanced techniques. In the end, the more flexible and mathematically manageable approach becomes the pragmatic approach. The flexibility in the modeling approach flows well with the overall theme of this book: "If you can think it, you can solve it!"

Finally, the author's intention is to reveal as much as possible in the realms of real options. A black box will remain a black box if no one can understand the concepts despite its power and applicability. It is only when the black box becomes transparent that analysts can understand, apply, and convince others of its results and applicability, that the approach will receive wide-spread influence. It took over two decades for discounted cash flow and net present value analysis to take hold in corporate finance – then again, that was during an era of slide-rules, little knowledge of corporate finance, and virtually no desktop computer software spreadsheet applications. The author is convinced that with the advent of his software, Real Options Analysis Toolkit, books such as this one (that demystifies real options, rather than collude it with academic jargon and unnecessary complexities), seminars and trainings like the ones the author has held worldwide, the learning curve will be traversed even more quickly and real options will be accepted as widely as discounted cash flow modeling within the next few decades.

ABOUT THE AUTHOR

Dr. Johnathan C. Mun is the founder, chairman and CEO of Real Options Valuation, Inc. (ROV), a consulting, training, and software development firm specializing in strategic real options, financial valuation, Monte Carlo simulation, stochastic forecasting, optimization, and advanced analytics located in northern Silicon Valley, California. ROV has partners around the world including Beijing, Chicago, Colombia, Hong Kong, Mexico City, New York, Nigeria, Shanghai, Singapore, Spain, Zurich, and other

locations. ROV also has a local office in Shanghai. He is also the chairman of the International Institute of Professional Education and Research (IIPER), an accredited global organization providing the Certified in Risk Management (CRM) designation, among others, staffed by professors from named universities from around the world. He is the creator of multiple software tools including *Risk Simulator*, *Real Options SLS*, *Modeling Toolkit*, *Basel II Modeler*, *ROV Modeler*, *ROV Optimizer*, *ROV Valuator*, *ROV Extractor and Evaluator*, *ROV Compiler*, *ROV BizStats*, *ROV Dashboard*, *Employee Stock Options Valuation* software and others (some of these tools are showcased in this book), as well as the risk analysis *Training DVD*. He has authored ten books published by John Wiley & Sons and Elsevier Science, including *The Banker's Handbook on Credit Risk* (2008); *Advanced Analytical Models: 250 Applications from Basel II Accord to Wall Street and Beyond* (2008); *Modeling Risk: Applying Monte Carlo Simulation, Real Options, Optimization, and Forecasting* (2006); *Real Options Analysis: Tools and Techniques, First and Second Editions* (2003 and 2005); *Real Options Analysis Course: Business Cases* (2003); *Applied Risk Analysis: Moving Beyond Uncertainty* (2003); and *Valuing Employee Stock Options* (2004). His books and software are being used at top universities around the world. Dr. Mun is also currently a finance and economics professor and has taught courses in financial management, investments, real options, economics, and statistics at the undergraduate and the graduate MBA levels. He teaches and has taught at universities all over the world, from the U.S. Naval Postgraduate School (Monterey, California) and University of Applied Sciences (Switzerland and Germany) as full professor, to Golden Gate University (California) and San Francisco State University (California) as adjunct professor, and has chaired many graduate research MBA thesis and Ph.D. dissertation committees. He was formerly the Vice President of Analytics at Decisioneering, Inc. Before that, he was a Consulting Manager and Financial Economist in the Valuation Services and Global Financial Services practice of KPMG Consulting and a Manager with the Economic Consulting Services practice at KPMG LLP. He has taught and consulted for over 100 multinational firms (former clients include 3M, Airbus, Boeing, BP, Chevron Texaco, Financial Accounting Standards Board, Fujitsu, GE, Microsoft, Motorola, Pfizer, Timken, U.S. Department of Defense, State and Local Governments, Veritas, and many others). His experience prior to joining KPMG included being department head of financial planning and analysis at Viking Inc. of FedEx, performing financial forecasting, economic analysis, and market research.

Dr. Mun received his Ph.D. in Finance and Economics from Lehigh University, where his research and academic interests were in the areas of investment finance, econometric modeling, financial options, corporate finance, and microeconomic theory. He also has an MBA in business administration, an MS in management science, and a BS in Biology and Physics. He is Certified in Financial Risk Management (FRM), Certified in Financial Consulting (CFC), and Certified in Risk Management (CRM). He is a member of the American Mensa, Phi Beta Kappa Honor Society, and Golden Key Honor Society as well as several other professional organizations, including the Eastern and Southern Finance Associations, American Economic Association, and Global Association of Risk Professionals. In addition, he has written many academic articles published in the Journal of the Advances in Quantitative Accounting and Finance, the Global Finance Journal, the International Financial Review, the Journal of Financial Analysis, the Journal of Applied Financial Economics, the Journal of International Financial Markets, Institutions and Money, the Financial Engineering News, and the Journal of the Society of Petroleum Engineers.

PRAISES FOR REAL OPTIONS ANALYSIS COURSE

"Finally, someone gets it! Pure theory without application is useless to the general practitioner! Dr. Mun has managed to remove the cloak of mystery from real options. While his first book dives into the theory and mathematics of the real options methodology, this book cuts to the chase and is chock full of real-life examples that the practitioner can use for framing and analyzing real-world problems. Dr. Mun has created what are destined to become *THE* "user's manuals" for anyone attempting to apply the exciting analytics of real options. Whether you need help with theory, application or simply explaining your results to management, Mun has got you covered."

Jaswant Singh Sihra, P.E., M.B.A.

Senior Strategic Planning Advisor, Halliburton Company

"Most of us come to real options from the perspective of our own areas of expertise. Mun's great skill with this book is in making real options analysis understandable, relevant and therefore immediately applicable to the field within which you are working."

Robert Fourt

Partner, Gerald Eve (UK)

"Dr. Mun's latest book is a logical extension of the theory and application presented in *Real Options Analysis*. More specifically, The *Real Options Analysis* Course presents numerous real options examples and provides the reader with step-by-step problem solving techniques. After having read the book, readers will better understand the underlying theory and the opportunities for applying real option theory in corporate decision-making."

Chris D. Treharne, M.B.A., A.S.A., M.C.B.A.
President – Gibraltar Business Appraisals, Inc.

"This text provides an excellent follow up to Dr. Mun's first book, *Real Options Analysis*. The cases in the *Real Options Analysis* Course provide numerous examples of how the use of real options and the Real Options Toolkit Software can assist in the valuation of strategic and managerial flexibility in a variety of arenas, with many practical and useful examples."

Charles T. Hardy, Ph.D., M.B.A.
Chief Financial Officer & Director of Business Development
Panorama Research, Inc.

"Mun provides a very practical step-by-step guide to applying simulations and real option analysis—inaluable to those of us who are no longer satisfied with conventional valuation approaches alone."

Fred Kohli
Head of Portfolio Management
Syngenta Crop Protection Ltd. (Switzerland)

"The book on Real Options Analysis Course is an engaging hands-on reference for corporate financial engineers, and corporate controllers looking for robust state-of-the-art financial methodologies to tie corporate strategy with financial asset management with the objective to create shareholder value. It is highly recommended for strategists interested in the design of global value chain management. It is a must study for former MBAs who have the desire to keep up with new financial analytics."

Prof Thoi Truong
Oregon Graduate Institute of Technology

Real Options Analysis: Tools and Techniques for Valuing Strategic Investments & Decisions

Dr. Johnathan Mun

ISBN: 0-471-25696-X (2002)

Hard Cover and Cloth 416 Pages

Available on www.amazon.com

Keyword search: JOHNATHAN MUN

Real Options Analysis (Wiley Finance), is now available on the Wiley and Amazon web sites. The book follows the lecture seminars: "Real Options for Managers" and "Real Options for Analysts" that the author has held worldwide. A Japanese translation is currently underway and a follow-up book, "*Real Options Analysis: Business Cases and Software Applications*" is forthcoming (February 2003). The book includes a CD-ROM of the Real Options Analysis Toolkit demo software, Crystal Ball® Monte Carlo simulation trial software, OptQuest stochastic-optimization software, and a series of Excel worksheet models ranging from forecast simulation to resource optimization. The book and software are being adopted by the Wharton School's Executive MBA program (University of Pennsylvania), Boston University, Fordham University, and others. In addition, leading industries are in the process of adopting the methodologies outlined in the book and software, including Accenture, Timken, Schlumberger, etc.

PREFACE

Real Options Analysis provides a novel view of evaluating capital investment strategies by taking into consideration the strategic decision-making process. The book provides a qualitative and quantitative description of real options, the methods used in solving real options, why and when they are used, and the applicability of these methods in decision-making. In addition, multiple business cases and real-life applications are discussed. This discussion includes presenting and framing the problems, as well as introducing a stepwise quantitative process developed by the author for solving these problems using the different methodologies inherent in real options. Included are technical presentations of models and approaches used as well as their theoretical and mathematical justifications. The book is divided into two parts. The first part looks at the qualitative nature of real options, providing actual business cases and scenarios of real options in the industry, as well as the high-level explanations of how real options provide the much-needed insights in decision-making. The second part of the book looks at the quantitative analysis, complete with worked-out examples and mathematical formulae. This book is targeted at uninitiated professionals as well as those knowledgeable in real options applications. It is also applicable for use as a second-year M.B.A. level or introductory Ph.D. textbook. A comprehensive CD-ROM is included in the book. The CD-ROM consists of 69 Real Options Models, Crystal Ball® Monte Carlo simulation software, and a series of example options analysis spreadsheets.

ABOUT THE AUTHOR

Dr. Johnathan C. Mun is the founder, chairman and CEO of Real Options Valuation, Inc. (ROV), a consulting, training, and software development firm specializing in strategic real options, financial valuation, Monte Carlo simulation, stochastic forecasting, optimization, and advanced analytics located in northern Silicon Valley, California. ROV has partners around the world including Beijing, Chicago, Colombia, Hong Kong, Mexico City, New York, Nigeria, Shanghai, Singapore, Spain, Zurich, and other locations. ROV also has a local office in Shanghai. He is also the chairman of the International Institute of Professional Education and Research (IIPER), an accredited global organization providing the Certified in Risk Management (CRM) designation, among others, staffed by professors from named universities from around the world. He is the creator of multiple software tools including *Risk Simulator*, *Real Options SLS*, *Modeling Toolkit*, *Basel II Modeler*, *ROV Modeler*, *ROV Optimizer*, *ROV Valuator*, *ROV Extractor and Evaluator*, *ROV Compiler*, *ROV BizStats*, *ROV Dashboard*, *Employee Stock Options Valuation* software and others (some of these tools are showcased in this book), as well as the risk analysis Training DVD. He has authored ten books published by John Wiley & Sons and Elsevier Science, including *The Banker's Handbook on Credit Risk* (2008); *Advanced Analytical Models: 250 Applications from Basel II Accord to Wall Street and Beyond* (2008); *Modeling Risk: Applying Monte Carlo Simulation, Real Options, Optimization, and Forecasting* (2006); *Real Options Analysis: Tools and Techniques, First and Second Editions* (2003 and 2005); *Real Options Analysis Course: Business Cases* (2003); *Applied Risk Analysis: Moving Beyond Uncertainty* (2003); and *Valuing Employee Stock Options* (2004). His books and software are being used at top universities around the world. Dr. Mun is also currently a finance and economics professor and has taught courses in financial management, investments, real options, economics, and statistics at the undergraduate and the graduate MBA levels. He teaches and has taught at universities all over the world, from the U.S. Naval Postgraduate School (Monterey, California) and University of Applied Sciences (Switzerland and Germany) as full professor, to Golden Gate University (California) and San Francisco State University (California) as adjunct professor, and has chaired many graduate research MBA thesis and Ph.D. dissertation committees. He was formerly

the Vice President of Analytics at Decisioneering, Inc. Before that, he was a Consulting Manager and Financial Economist in the Valuation Services and Global Financial Services practice of KPMG Consulting and a Manager with the Economic Consulting Services practice at KPMG LLP. He has taught and consulted for over 100 multinational firms (former clients include 3M, Airbus, Boeing, BP, Chevron Texaco, Financial Accounting Standards Board, Fujitsu, GE, Microsoft, Motorola, Pfizer, Timken, U.S. Department of Defense, State and Local Governments, Veritas, and many others). His experience prior to joining KPMG included being department head of financial planning and analysis at Viking Inc. of FedEx, performing financial forecasting, economic analysis, and market research.

Dr. Mun received his Ph.D. in Finance and Economics from Lehigh University, where his research and academic interests were in the areas of investment finance, econometric modeling, financial options, corporate finance, and microeconomic theory. He also has an MBA in business administration, an MS in management science, and a BS in Biology and Physics. He is Certified in Financial Risk Management (FRM), Certified in Financial Consulting (CFC), and Certified in Risk Management (CRM). He is a member of the American Mensa, Phi Beta Kappa Honor Society, and Golden Key Honor Society as well as several other professional organizations, including the Eastern and Southern Finance Associations, American Economic Association, and Global Association of Risk Professionals. In addition, he has written many academic articles published in the Journal of the Advances in Quantitative Accounting and Finance, the Global Finance Journal, the International Financial Review, the Journal of Financial Analysis, the Journal of Applied Financial Economics, the Journal of International Financial Markets, Institutions and Money, the Financial Engineering News, and the Journal of the Society of Petroleum Engineers.

PRAISES FOR REAL OPTIONS ANALYSIS

"...this book is a *must have* and *must read*... Dr. Mun's new book is a refreshing, cutting-edge look at a powerful new decision-making process... it isn't often you can truthfully say a book breaks new ground, but [this book] has certainly done that."

-Glenn G. Kautt, President, Monitor Group, Inc. (USA)

"Many books on real options can be intimidating. Dr. Mun offers a pragmatic, reliable and entertaining guide. Complex concepts and formulas are brilliantly interspersed with well chosen examples and step-by-step walk through from a variety of industries."

-Shota Hattori, President and CEO, Kozo Engineering, (Japan)

"Real Options Analysis is the clearest book on real options that we have read to date. It does an excellent job of demystifying a difficult and complex subject. It provides a solid basis for conceiving, assessing and evaluating real option investments, which will make it useful to practitioners and students alike."

-Ian C. MacMillan, Professor

The Wharton School of the University of Pennsylvania (USA)

"...the clarity and comprehensive coverage makes it the best guide for all practitioners... coupled with state-of-the-art financial tools CD-ROM."

-Michael Sim, Partner, Moores Rowland International (Hong Kong)

"Dr. Johnathan Mun certainly has earned the reputation of being an expert on the subject... consultants, analysts, decision-makers and engineers will be all over this book and its software."

-Phyllis Koessler, Managing Director, Koessler and Associates (Switzerland)

"...finally, a real options analysis book that is technically sophisticated enough to be useful, and practically written so that it can actually be used. It is destined to become the handbook of real options."

-Tracy Gomes, CEO, Intellectual Property Economics (USA)

"Dr. Mun demystifies real options analysis and delivers a powerful, pragmatic guide for decision-makers and practitioners alike. Finally, there is a book that equips professionals to easily recognize, value, and seize real options in the world around them."

-Jim Schreckengast, Sr. Vice President, R&D Strategy – Gemplus International SA (France)

"...written from the viewpoint of an educator and a practitioner, his book offers a readable reference full of insightful decision-making tools to satisfy both the novice and the experienced veteran."

-Richard Kish, Ph.D., Associate Professor of Finance, Lehigh University

"Dr. Mun has converted his tacit financial knowledge into a digestible user-friendly book. He effectively leads the reader on a solid path starting from *discounted cash flow*, progressing through *Monte Carlo analysis* and evolving to *real options* to get even closer to the target of achieving confident corporate decisions. His ability to clearly explain the relationships of popular competing analysis methods will make this a must have reference book for today's decision makers."

-Ken English, Director of R&D, The Timken Company (USA)

"The book leads the field in real options analytics and is a must-read for anyone interested in performing such analyses. Dr. Mun has made a formidable subject crystal clear and exponentially easy for senior management to understand. *Monte Carlo simulation* and *real options* software alone is worth the book price many times over."

-Morton Glantz, Renowned educator in finance, author of several books, financial advisor to government (USA)

TABLE OF CONTENTS

PART I: THEORY

Chapter One: A New Paradigm?

- A Paradigm Shift
- Chooser and Sequential Options: The Case of the Pharmaceutical R&D
- Expansion and Switching Options: The Case of the Oil and Gas
Exploration and Production
- Abandonment Options: The Case of the Manufacturer
- Expansion and Compound Options: The Case of the Operating System
- Expansion and Barrier Options: The Case of the Lost Venture Capitalist
- Compound Expansion Options: The Case of the Internet Start-up
- Expansion Options: The Case of the e-Business Initiative
- The Real Options Solution
- Issues to Consider
- Industry Leaders Embracing Real Options
- What the Experts Are Saying
 - Appendix 1A – The Timken Company on Real Options in R&D and Manufacturing
 - Appendix 1B – Schlumberger on Real Options in Oil and Gas
 - Appendix 1C – Intellectual Property Economics on Real Options and Intangible Valuation
 - Appendix 1D – Gemplus on Real Options in High-Tech R&D
 - Appendix 1E – Sprint on Real Options in Telecommunications

Chapter Two: Traditional Valuation Approaches

- The Traditional Views
- Practical Issues Using Traditional Valuation Methodologies
 - Appendix 2A – Financial Statement Analysis
 - Appendix 2B – Discount Rate vs. Risk-free Rate

Chapter Three: Real Options Analysis

- The Fundamental Essence of Real Options
- The Basics of Real Options
- A Simplified Example of Real Options in Action
- Advanced Approaches to Real Options
- Why are Real Options Important?
- Comparing Traditional Approaches with Real Options

Chapter Four: The Real Options Process

- Critical Steps in Performing Real Options Analysis
- Qualitative Management Screening
- Base Case Net Present Value Analysis
- Monte Carlo Simulation
- Real Options Problem Framing
- Real Options Modeling and Analysis
- Portfolio and Resource Optimization
- Reporting
- Update Analysis

Chapter Five: Real Options, Financial Options, Monte Carlo Simulation, and Optimization

- Real Options vs. Financial Options
- Monte Carlo Simulation
 - Appendix 5A –Financial Options
 - Appendix 5B – Simulation
 - Appendix 5C – Forecasting
 - Appendix 5D – Optimization

PART II: PRACTICE

Chapter Six: Behind the Scenes

- Real Options: Behind the Scenes
- Binomial Lattices
- The Look and Feel of Uncertainty
- A Firm's Real Options Provide Value in the Face of Uncertainty
- Binomial Lattices as a Discrete Simulation of Uncertainty
- Granularity Leads to Precision
- An Intuitive Look at the Binomial Equations
- Frolicking in a Risk-Neutral World

Chapter Seven: Real Option Models

- Option to Abandon
- Option to Expand
- Option to Contract
- Option to Choose
- Compound Options
- Changing Strikes
- Changing Volatility
- Sequential Compound Option
- Extension to the Binomial Models
 - Appendix 7A – Volatility Estimates
 - Appendix 7B – Black-Scholes in Action
 - Appendix 7C – Binomial Path-Dependent and Market-Replicating Portfolios
 - Appendix 7D – Single-State Static Binomial Example
 - Appendix 7E – Sensitivity Analysis
 - Appendix 7F – Reality Checks
 - Appendix 7G – Applying Monte Carlo Simulation to Solve Real Options Problems
 - Appendix 7H – Trinomial Lattices
 - Appendix 7I – Non-Recombining Lattices

Chapter Eight: Advanced Options Problems

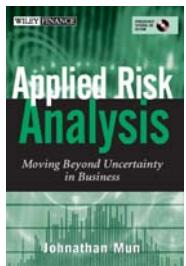

- The Advanced Problems
- Decision Trees
- Exit and Abandonment Options
- Compound Options
- Timing Options
- Solving Timing Options Calculated Using Stochastic Optimization
- Switching Options
 - Appendix 8A – Stochastic Processes
 - Appendix 8B – Differential Equations for a Deterministic Case
 - Appendix 8C – Exotic Options Formulae
 - Black and Scholes Option Model – European Version
 - Black and Scholes with Drift (Dividend) – European version
 - Black and Scholes with Future Payments – European version
 - Chooser Options (Basic Chooser)
 - Complex Chooser
 - Compound Options on Options
 - Exchange Asset for Asset Option
 - Fixed Strike Look-back Option
 - Floating Strike Look-back Options
 - Forward Start Options
 - Generalized Black-Scholes Model
 - Options on Futures
 - Spread Option
 - Discrete Time Switch Options
 - Two Correlated-Assets Option

Chapter Nine: Real Options Analysis Toolkit Software (CD-ROM)

- Introduction to the Real Option Analysis Toolkit Software CD-ROM
- Creating and Solving a Customized Option Using the Software
- Advanced Real Options Models in the Software
 - Appendix 9A – Real Options Analysis Toolkit Software Description and Excel Functions
 - Appendix 9B – Getting Started with Crystal Ball® Monte Carlo Simulation
 - Appendix 9C – Resource Optimization Using Crystal Ball's® Opt-Quest Software

Chapter Ten: Results Interpretation and Presentation

- Comparing Real Options Analysis with Traditional Financial Analysis
- The Evaluation Process
- Summary of the Results
- Comparing Across Different Sized Projects
- Comparing Risk and Return of Multiple Projects
- Impact to Bottom Line
- Critical Success Factors and Sensitivity Analysis
- Risk Analysis and Simulation on NPV
- Break-even Analysis and Payback Periods
- Discount Rate Analysis
- Real Options Analysis Assumptions
- Real Options Analysis
- Real Options Risk Analysis
 - Appendix 10A – Summary of Articles

Applied Risk Analysis: Moving Beyond Uncertainty

Dr. Johnathan Mun

ISBN: 0-471-47885-7 (2003)

Hard Cover and Cloth

460 Pages Available at www.amazon.com

Keyword search: JOHNATHAN MUN

Applied Risk Analysis (Wiley Finance 2003), is now available on the Wiley and Amazon web sites. The book includes a CD-ROM with a series of Excel worksheet models ranging from stochastic simulations to resource optimization. The book and software are being adopted by various universities around the world in their MBA programs. In addition, leading industries are in the process of adopting the methodologies outlined in the book and software.

PREFACE

We live in an environment fraught with risk and operate our businesses in a risky world, as higher rewards only come with risks. It is unimaginable if the element of risk is not considered when corporate strategy is framed and when tactical projects are implemented. *Applied Risk Analysis* provides a novel view of evaluating business decisions, projects, and strategies by taking into consideration a unified strategic portfolio analytical process. The book provides a qualitative and quantitative description of risk, as well as introductions to the methods used in identifying, quantifying, applying, predicting, valuing, hedging, diversifying, and managing risk, through rigorous examples of the methods' applicability in the decision-making process. Pragmatic applications are emphasized in order to demystify the many elements inherent in risk analysis. A black box will remain a black box if no one can understand the concepts despite its power and applicability. It is only when the black box becomes transparent that analysts can understand, apply, and convince others of its results, value-add, and applicability, that the approach will receive wide-spread influence. This is done through step-by-step applications of risk analysis as well as presenting multiple business cases, and discussing real-life applications. This book is targeted at both the uninitiated professional as well as those verbose in risk analysis—there is always something for everyone. It is also applicable for use as a second-year M.B.A. level or introductory Ph.D. textbook. A CD-ROM is included in the book.

ABOUT THE AUTHOR

Dr. Johnathan C. Mun is the founder, chairman and CEO of Real Options Valuation, Inc. (ROV), a consulting, training, and software development firm specializing in strategic real options, financial valuation, Monte Carlo simulation, stochastic forecasting, optimization, and advanced analytics located in northern Silicon Valley, California. ROV has partners around the world including Beijing, Chicago, Colombia, Hong Kong, Mexico City, New York, Nigeria, Shanghai, Singapore, Spain, Zurich, and other locations. ROV also has a local office in Shanghai. He is also the chairman of the International Institute of Professional Education and Research (IIPER), an accredited global organization providing the Certified in Risk Management (CRM) designation, among others, staffed by professors from named universities from around the world. He is the creator of multiple software tools including *Risk Simulator*, *Real Options SLS*, *Modeling Toolkit*, *Basel II Modeler*, *ROV Modeler*, *ROV Optimizer*, *ROV Valuator*, *ROV Extractor and Evaluator*, *ROV Compiler*, *ROV BizStats*, *ROV Dashboard*, *Employee Stock Options Valuation* software and others (some of these tools are showcased in this book), as well as the risk analysis *Training DVD*. He has authored ten books published by John Wiley & Sons and Elsevier Science, including *The Banker's Handbook on Credit Risk* (2008); *Advanced Analytical Models: 250 Applications from Basel II Accord to Wall Street and Beyond* (2008); *Modeling Risk: Applying Monte Carlo Simulation, Real Options, Optimization, and Forecasting* (2006); *Real Options Analysis: Tools and Techniques, First and Second Editions* (2003 and 2005); *Real Options Analysis Course: Business Cases* (2003); *Applied Risk Analysis: Moving Beyond Uncertainty* (2003); and *Valuing Employee Stock Options* (2004). His books and software are being used at top universities around the world. Dr. Mun is also currently a finance and economics professor and has taught courses in financial management, investments, real options, economics, and statistics at the undergraduate and the graduate MBA levels. He teaches and has taught at universities all over the world, from the U.S. Naval Postgraduate School (Monterey, California) and University of Applied Sciences (Switzerland and Germany) as full professor, to Golden Gate University (California) and San Francisco State University (California) as adjunct professor, and has chaired many graduate research MBA thesis and Ph.D. dissertation committees. He was formerly the Vice President of Analytics at Decisioneering, Inc. Before that, he was a Consulting Manager and Financial Economist in the Valuation Services and Global Financial Services practice of KPMG Consulting and a Manager with the Economic Consulting Services practice at KPMG LLP. He has taught and consulted for over 100 multinational firms (former clients include 3M, Airbus, Boeing, BP, Chevron Texaco, Financial Accounting Standards Board, Fujitsu, GE, Microsoft, Motorola, Pfizer, Timken, U.S. Department of Defense, State and Local Governments, Veritas, and many others). His experience prior to joining KPMG included being department head of financial planning and analysis at Viking Inc. of FedEx, performing financial forecasting, economic analysis, and market research.

Dr. Mun received his Ph.D. in Finance and Economics from Lehigh University, where his research and academic interests were in the areas of investment finance, econometric modeling, financial options, corporate finance, and microeconomic theory. He also has an MBA in business administration, an MS in management science, and a BS in Biology and Physics. He is Certified in Financial Risk Management (FRM), Certified in Financial Consulting (CFC), and Certified in Risk Management (CRM). He is a member of the

American Mensa, Phi Beta Kappa Honor Society, and Golden Key Honor Society as well as several other professional organizations, including the Eastern and Southern Finance Associations, American Economic Association, and Global Association of Risk Professionals. In addition, he has written many academic articles published in the Journal of the Advances in Quantitative Accounting and Finance, the Global Finance Journal, the International Financial Review, the Journal of Financial Analysis, the Journal of Applied Financial Economics, the Journal of International Financial Markets, Institutions and Money, the Financial Engineering News, and the Journal of the Society of Petroleum Engineers.

PRAISES FOR REAL OPTIONS ANALYSIS

Johnathan Mun's book is a sparkling jewel in my finance library. Mun demonstrates a deep understanding of the underlying mathematical theory in his ability to reduce complex concepts to lucid explanations and examples. For this reason, he's my favorite writer in this field. Experienced professionals will appreciate Mun's competence in boiling down complex math to a clear presentation of the essential solutions to financial risk, corporate finance, and forecasting.

Janet Tavakoli, President, Tavakoli Structured Finance

Every year the market of managerial books is flooded again and again. This book is different. It puts a valuable tool into the hands of corporate managers, who are willing to stand up against uncertainties and risks and are determined to deliver value to shareholder and society even in rough times. It is a book for the new generation of managers, for whom Corporate America is waiting.

Dr. Markus Götz Junginger

Managing Partner, IBCOL Consulting AG (Switzerland)

Dr. Mun breaks through the hyperbole and presents a clear step-by-step approach revealing to readers how quantitative methods and tools can truly make a difference. In short, he teaches you what's relevant and a must know. I highly recommend this book, especially if you want to effectively incorporate the latest technologies into your decision making process for your real world business.

Dr. Paul W. Finnegan, MD, MBA

Vice President, Commercial Operations and Development

Alexion Pharmaceuticals, Inc.

Johnathan Mun has previously published a number of very popular books dealing with different aspects of risk analysis, associated techniques and tools. This last publication puts all the pieces together. The book is really unavoidable for any professional who wants to address risk evaluation following a logical, concrete and conclusive approach.

Jean Louis Vaysse

Deputy Vice President Marketing, Airbus (France)

A must read for product portfolio managers... it captures the risk exposure of strategic investments, and provides management with estimates of potential outcomes and options for risk mitigation.

Rafael E. Gutierrez

Executive Director of Strategic Marketing and Planning, Seagate Technology

Mun has the uncanny ability to clarify the complex, distilling risk analysis concepts into a truly readable and practical guide for decision-makers. This book blazes a trail that connects abstract yet powerful theories with real-world applications and examples, leaving the reader enlightened and empowered.

Stephen Hoye, MBA, President, Hoye Consulting Group

Strategy development has fallen on hard times being judged not relevant for a rapidly changing world. With this book, Dr. Mun attacks this poor excuse head-on by presenting a clearly organized, tool supported, methodology that logically progresses from exploring uncertainty that bounds risk to the creation of options for constructing realistic business strategies.

Robert Mack

Vice President, Distinguished Analyst, Gartner Group

This book is a pleasure to read both for subject matter experts as well as for novices. It holds a high risk of addicting the readers. Dr. Mun leads the readers through step by step complex mathematical concepts with unmatched ease and clarity. Well chosen examples and pointers to pitfalls complement the splendidly written chapters. This book will be a bestseller in Risk Management and is a "must read" for all professionals.

Dr. Hans Weber

Syngenta AG (Switzerland), Product Development Project Leader

Once again, Dr. Johnathan Mun has attained his usual standard: excellence in making not-so-simple but very useful quantitative analytical techniques accessible to the interested reader who doesn't necessarily have an engineering or scientific training. This book presents a seriously comprehensive guide to everyday users of spreadsheet models, particularly those interested in Risk Analysis and Management, on how to move beyond simple statistical analysis. It is a "must have" to academicians searching for user-friendly bibliography, and to practitioners willing to get a first-hand experience on cutting-edge, high-productivity analytical tools.

Dr. Roberto J. Santillan-Salgado

Director of the M.S., EGADE-ITESM, Monterrey Campus (Mexico)

A fundamental principal in finance is the relationship between risk and reward, yet today empirical risk measurement, valuations, and deal structuring are still the norm. Business professionals, venture capitalists and other investors will all find Johnathan Mun's latest book on conceptualizing and quantitatively measuring risk in business of considerable value and a welcome addition to their libraries.

Dr. Charles T. Hardy

Principal, Hardy & Associates

TABLE OF CONTENTS

SECTION ONE – RISK IDENTIFICATION

CHAPTER 1 – BEYOND UNCERTAINTY

A Brief History of Risk: What Exactly is Risk?
Uncertainty versus Risk
Why is Risk Important in Making Decisions?
Dealing with Risk the Old Fashioned Way
The Look and Feel of Risk and Uncertainty
Five Minute Industry Spotlight: ExperCorp

SECTION TWO – RISK EVALUATION

CHAPTER 2 – FROM RISK TO RICHES

Taming the Beast
The Basics of Risk
The Nature of Risk and Returns
The Statistics of Risk
The Measurements of Risk
Five Minute Industry Spotlight: Farmland
Five Minute Industry Spotlight: Environmental Protection Agency

CHAPTER 3 – A GENTLEMAN'S GUIDE TO MODEL BUILDING

Model Building Etiquette
Document the Model
Separate Inputs, Calculations and Results
Protect the Models
Make the Model User-Friendly
Track the Model
Automate the Model
Model Esthetics
Appendix—A Primer on VBA Modeling and Writing Macros

SECTION THREE – RISK QUANTIFICATION

CHAPTER 4 – ON THE SHORES OF MONACO

What is Monte Carlo Simulation?
Why Are Simulations Important?
Comparing Simulation with Traditional Analyses
Using Crystal Ball and Excel to Perform Simulations
Five Minute Industry Spotlight: Colorado School of Mines
Five Minute Industry Spotlight: Hewlett Packard
Appendix—Simulation

CHAPTER 5 – PEERING INTO THE CRYSTAL BALL

The Basics of Crystal Ball Software
Getting Started With Crystal Ball Software
The Simulation Environment
Creating a Simulation
Interpreting the Simulation Results
Five Minute Industry Spotlight: TRW
Five Minute Industry Spotlight: DuPont Merck

CHAPTER 6 – PANDORA'S TOOL BOX

Tornado and Sensitivity Tools in Simulation
Correlating and Fitting a Distribution
Precision Control
Bootstrap Simulation
Two-Dimensional Simulation
Decision Tables
Five Minute Industry Spotlight: 3M
Five Minute Industry Spotlight: Deloitte & Touche Consulting
Appendix—Goodness-of-Fit Tests

SECTION FOUR – INDUSTRY APPLICATIONS

CHAPTER 7 – EXTENDED BUSINESS CASES I: PHARMA TO BLACK GOLD

Case Study: Pharmaceutical and Biotech—High Precision Quantitative Deal Structuring in the Biotechnology and Pharmaceutical Industries
Case Study: Oil and Gas Production and Exploration
Five Minute Industry Spotlight: Sierra Systems
Five Minute Industry Spotlight: Motorola

SECTION FIVE – RISK PREDICTION

CHAPTER 8 – TOMORROW'S FORECAST TODAY

What is Forecasting?
The Nature and View of Forecasting
Five Minute Industry Spotlight: Hewlett Packard
Five Minute Industry Spotlight: SunTrust Bank

CHAPTER 9 – USING THE PAST TO PREDICT THE FUTURE

Time-Series Forecasting Methodology
No Trend and No Seasonality
Single Moving Average
Error Estimation (RMSE, MSE, MAD, MAPE, Theil's U)

Single Exponential Smoothing

Optimizing Forecasting Parameters
With Trend But No Seasonality
Double Moving Average
Double Exponential Smoothing
No Trend But With Seasonality
Additive Seasonality
Multiplicative Seasonality
With Seasonality and With Trend
Holt-Winters' Additive Seasonality
Holt-Winters' Multiplicative Seasonality
Regression Analysis
Regression Output
Goodness-of-Fit
Regression Assumptions
The Pitfalls of Forecasting: Outliers, Nonlinearity, Multicollinearity, Heteroskedasticity, Autocorrelation, and Structural Breaks
Other Technical Issues in Regression Analysis
Introduction to Advanced Forecasting
Appendices—Forecast Intervals; Ordinary Least Squares; Detecting and Fixing Heteroskedasticity; Detecting and Fixing Multicollinearity; Detecting and Fixing Autocorrelation

SECTION SIX – RISK DIVERSIFICATION

CHAPTER 10 – THE SEARCH FOR THE OPTIMAL DECISION

What is an Optimization Model?
The Traveling Financial Planner
The Lingo of Optimization
Solving Optimization Graphically and using Excel's Solver
Five Minute Industry Spotlight: ProViser Management
Five Minute Industry Spotlight: Texaco

CHAPTER 11 – OPTIMIZATION UNDER UNCERTAINTY

Project Selection Model (Discrete Optimization under Uncertainty)Portfolio Optimization using Risk and Return (Continuous Stochastic Optimization)
Five Minute Industry Spotlight: Minnesota Power

SECTION SEVEN – RISK MITIGATION

CHAPTER 12 – WHAT'S SO REAL ABOUT "REAL OPTIONS", AND WHY IS IT OPTIONAL?

What is Real Options?
The Real Options Solution in a Nutshell
Issues to Consider
Implementing Real Options Analysis
Choosing the Right Real Options Analysis Tools
Five Minute Industry Spotlight: Boeing

CHAPTER 13 – THE BLACK BOX MADE TRANSPARENT: REAL OPTIONS ANALYSIS TOOLKIT

Getting Started With Real Options Analysis Toolkit Software
The Lattice Viewer
The Help Environment
Solving Customized Options
Accessing the Functions, Running Simulations and Optimization

SECTION EIGHT – MORE INDUSTRY APPLICATIONS

CHAPTER 14 – EXTENDED BUSINESS CASES II: FROM LAND TO MONEY

Case Study: Understanding Risk and Optimal Timing in a Real Estate Development Using Real Options Analysis
Case Study: Using Stochastic Optimization and Valuation Models to Evaluate the Credit Risk of Corporate Restructuring

SECTION NINE – RISK MANAGEMENT

CHAPTER 15 – THE WARNING SIGNS

The Problem of Negligent Entrustment
Management's Due Diligence
Sins of an Analyst
Reading the Warning Signs in Monte Carlo Simulation
Reading the Warning Signs in Time-Series Forecasting and Regression
Reading the Warning Signs in Real Options Analysis
Reading the Warning Signs in Optimization under Uncertainty

CHAPTER 16 – CHANGING A CORPORATE CULTURE

How to Get Risk Analysis Accepted into an Organization
Change Management Issues and Paradigm Shifts
Making Tomorrow's Forecast Today
Five Minute Industry Spotlight: Banker's Trust
Five Minute Industry Spotlight: Environment Canada

MODELING TOOLKIT

Real Options Valuation, Inc. se enorgullece en presentar su más reciente innovación: Modeling Toolkit (edición Premium). Esta herramienta consta de más de 800 modelos analíticos, funciones y herramientas, y cerca de 300 modelos analíticos en Excel /plantillas SLS y ejemplos en hojas de cálculo que cubre áreas de análisis de riesgo, simulación, predicción, análisis de riesgos de acuerdo a Basilea II, Riesgo de crédito y Riesgo de incumplimiento, los modelos estadísticos, y mucho más! . Esta herramienta es un conjunto de modelos matemáticos sofisticados escrito en C++ vinculadas en hojas de cálculo de Excel. Hay más de 1100 modelos, funciones, con plantillas de hojas de cálculo y plantillas SLS en este Modeling Toolkit:

Analytics

1. Central Limit Theorem
2. Central Limit Theorem (Lottery Analysis)
3. Flaw of Averages
4. Mathematical Integration
5. Parametric and Nonparametric Hypothesis Tests
6. Projectile Motion
7. Regression Diagnostics
8. Ships in the Night
9. Statistical Analysis
10. Weighting of Ratios

Banking Models

11. Audit of Construction Lending
12. Banker's Construction Budget
13. Classified Breakeven Loan
14. Classified Loan Borrowing Base
15. Classified Loan Cash Budget and Overdraft
16. Federal Reserve Camels Rating
17. Firm in Financial Distress
18. Project Finance Risk Rating
19. Queuing Models
20. Reconciling Enron's Cash Flow
21. Risk Rating Model
22. Sample Cash Flows
23. Sensitivity Projections
24. Stochastic Loan Pricing Model
25. Valuation and Appraisal

Credit Analysis

26. Credit Default Swaps/Credit Spread Options
27. Credit Default Swaps Correlated Counterparty Defaults
28. Credit Premium
29. Credit Risk and Price Effects
30. External Debt Rating Spreads
31. Internal Credit Risk Rating
32. Profit-Cost of New Credit

Debt Analysis

33. Asset Equity Parity Model
34. Cox Model on Price and Yield of Risky Debt with Mean Reverting Rates
35. Debt Repayment and Amortization
36. Debt Sensitivity Models
37. Merton Price of Risky Debt Stochastic Asset and Interest
38. Vasicek Debt Option Valuation

39. Vasicek Price/Yield Risky Debt

Decision Analysis

40. Decision Tree Basics
41. Decision Tree, EVPI, Minimax, Bayes Theorem
42. Economic Order Quantity and Inventory Reorder Point
43. Economic Order Quantity and Optimal Manufacturing
44. Expected Utility Analysis
45. Inventory Control
46. Queuing Models

Exotic Options

47. American, Bermudan and European Options
48. Asian Arithmetic
49. Asian Geometric
50. Asset or Nothing
51. Barrier Options
52. Binary Digital Options
53. Cash or Nothing
54. Commodity Options
55. Complex Chooser
56. Credit Spread Options
57. Currency Options
58. Double Barriers
59. Exchange Assets
60. Extreme Spread
61. Foreign Equity Linked Forex
62. Foreign Equity Domestic Currency
63. Foreign Equity Fixed Forex
64. Foreign Takeover Options
65. Forward Start
66. Futures and Forward Options
67. Gap Options
68. Graduated Barriers
69. Index Options
70. Inverse Gamma Out-of-the-money Options
71. Jump Diffusion
72. Leptokurtic and Skewed Options
73. Lookback Fixed Strike Partial Time
74. Lookback Fixed Strike
75. Lookback Floating Strike Partial Time
76. Lookback Floating Strike
77. Min and Max of Two Assets
78. Option Collar
79. Options on Options
80. Perpetual Options
81. Simple Chooser

82. Spread on Futures

83. Supershares
84. Time Switch
85. Trading Day Corrections
86. Two Assets Barrier
87. Two Assets Cash
88. Two Assets Correlated
89. Uneven Dividends
90. Writer Extendible

Forecasting

91. Brownian Motion Stochastic Process
92. Data Diagnostics
93. Econometric, Correlations and Multiple Regression
94. Exponential J-Growth Curves
95. Forecasting Manual Computations
96. Jump-Diffusion Stochastic Process
97. Linear Interpolation
98. Logistic S-Growth Curves
99. Markov Chains and Market Share
100. Mean-Reverting Stochastic Process
101. Multiple Regression
102. Nonlinear Extrapolation
103. Stochastic Processes and Yield Curves
104. Stock Distribution at Horizon
105. Time-Series Analysis
106. Time-Series ARIMA

Industry Applications

107. Asset Liability Management ALM
108. Biotech – Manufacturing Strategy
109. Biotech – In-licensing and Deal Structuring
110. Biotech – Investment Valuation
111. Electric Utility – Efficient Frontier Generation
112. Electric Utility – Electricity Contract Risk
113. Information Technology – Forecasting Use
114. Information Technology – Decision Analysis
115. Pensions – Closed Group Portfolio Matching
116. Pensions – Accounting Modeling and Optimization
117. Real Estate – Commercial ROI

Optimization

118. Capital Investments (Part A)
119. Capital Investments (Part B)
120. Continuous Portfolio Allocation
121. Discrete Project Selection

- 122. Inventory Optimization
- 123. Investment Portfolio Allocation
- 124. Military Portfolio and Efficient Frontier
- 125. Optimal Pricing with Elasticity
- 126. Optimization of a Harvest Model
- 127. Optimizing Ordinary Least Squares
- 128. Stochastic Portfolio Allocation

Options Analysis

- 129. Binary Digital Instruments
- 130. Inverse Floater Bond Lattice Maker
- 131. Options Adjusted Spreads on Debt
- 132. Options on Debt
- 133. Options Trading Strategies

Probability of Default

- 134. Empirical (Individuals)
- 135. External Options Model (Public Company)
- 136. Merton Internal Model (Private Company)
- 137. Merton Market Options Model (Industry Comparable)
- 138. Yields and Spreads (Market Comparable)

Project Management

- 139. Cost Estimation Model
- 140. Critical Path Analysis (CPM PERT GANTT)
- 141. Project Timing

Real Options SLS

- 142. Employee Stock Options - Simple American Call
- 143. Employee Stock Options - Simple Bermudan Call with Vesting
- 144. Employee Stock Options - Simple European Call
- 145. Employee Stock Options - Suboptimal Exercise
- 146. Employee Stock Options - Vesting and Suboptimal Exercise
- 147. Employee Stock Options - Vesting, Blackout, Suboptimal, Forfeiture
- 148. Exotic Options - American Call Option with Dividends
- 149. Exotic Options - Accruals on Basket of Assets
- 150. Exotic Options - American Call Option on Foreign Exchange
- 151. Exotic Options - American Call Option on Index Futures
- 152. Exotic Options - Barrier Option - Down and In Lower Barrier
- 153. Exotic Options - Barrier Option - Down and Out Lower Barrier

- 154. Exotic Options - Barrier Option - Up and In Upper Barrier Call
- 155. Exotic Options - Barrier Option - Up and In, Down and In Double Barrier Call
- 156. Exotic Options - Barrier Option - Up and Out Upper Barrier
- 157. Exotic Options - Barrier Option - Up and Out, Down and Out Double Barrier
- 158. Exotic Options - Basic American, European, versus Bermudan Call Options
- 159. Exotic Options - Chooser Option
- 160. Exotic Options - Equity Linked Notes
- 161. Exotic Options - European Call Option with Dividends
- 162. Exotic Options - Range Accruals
- 163. Options Analysis - Plain Vanilla Call I
- 164. Options Analysis - Plain Vanilla Call II
- 165. Options Analysis - Plain Vanilla Call III
- 166. Options Analysis - Plain Vanilla Call IV
- 167. Options Analysis - Plain Vanilla Put
- 168. Real Options - Abandonment American Option
- 169. Real Options - Abandonment Bermudan Option
- 170. Real Options - Abandonment Customized Option
- 171. Real Options - Abandonment European Option
- 172. Real Options - Contraction American and European Option
- 173. Real Options - Contraction Bermudan Option
- 174. Real Options - Contraction Customized Option
- 175. Real Options - Dual-Asset Rainbow Pentalomial Lattice
- 176. Real Options - Excel-based Options Models
- 177. Real Options - Exotic Complex Floating American Chooser
- 178. Real Options - Exotic Complex Floating European Chooser
- 179. Real Options - Expand Contract Abandon American and European Option
- 180. Real Options - Expand Contract Abandon Bermudan Option
- 181. Real Options - Expand Contract Abandon Customized I
- 182. Real Options - Expand Contract Abandon Customized II
- 183. Real Options - Expansion American and European Option

- 184. Real Options - Expansion Bermudan Option
- 185. Real Options - Expansion Customized Option
- 186. Real Options - Jump Diffusion Calls and Puts using Quadrynomial Lattices
- 187. Real Options - Mean Reverting Calls and Puts using Trinomial Lattices
- 188. Real Options - Multiple Asset Competing Options (3D Binomial)
- 189. Real Options - Multiple Phased Complex Sequential Compound Option
- 190. Real Options - Multiple Phased Sequential Compound
- 191. Real Options - Multiple Phased Simultaneous Compound
- 192. Real Options - Simple Calls and Puts (Trinomial Lattices)
- 193. Real Options - Simple Two Phased Sequential Compound
- 194. Real Options - Simple Two Phased Simultaneous Compound
- 195. Real Options - Strategic Cases - High-Tech Manufacturing Strategy A
- 196. Real Options - Strategic Cases - High-Tech Manufacturing Strategy B
- 197. Real Options - Strategic Cases - High-Tech Manufacturing Strategy C
- 198. Real Options - Strategic Cases - Oil and Gas - Strategy A
- 199. Real Options - Strategic Cases - Oil and Gas - Strategy B
- 200. Real Options - Strategic Cases - R&D Stage-Gate Process A
- 201. Real Options - Strategic Cases - R&D Stage-Gate Process B
- 202. Real Options - Strategic Cases - Switching Option Strategy I
- 203. Real Options - Strategic Cases - Switching Option Strategy II
- 204. Trinomial Lattices - American Call
- 205. Trinomial Lattices - American Put
- 206. Trinomial Lattices - European Call
- 207. Trinomial Lattices - European Put
- 208. Trinomial Lattices - Mean Reverting American Call Option
- 209. Trinomial Lattices - Mean Reverting American Put Option
- 210. Trinomial Lattices - Mean Reverting European Call Option
- 211. Trinomial Lattices - Mean Reverting European Put Option
- 212. Trinomial Lattices - Mean Reverting American Abandonment
- 213. Trinomial Lattices - Mean Reverting American Contraction

214. Trinomial Lattices - Mean Reverting American Expansion
215. Trinomial Lattices - Mean Reverting American Abandonment, Contraction, Expansion
216. Trinomial Lattices - Mean Reverting Bermudan Abandonment, Contraction, Expansion
217. Trinomial Lattices - Mean Reverting Abandonment, Contraction, Expansion
218. Trinomial Lattices - Mean Reverting European Abandonment, Contraction, Expansion
219. Quadrational Lattices - Jump Diffusion American Call
220. Quadrational Lattices - Jump Diffusion American Put
221. Quadrational Lattices - Jump Diffusion European Call
222. Quadrational Lattices - Jump Diffusion European Put
223. Pentanomial Lattices - American Rainbow Call Option
224. Pentanomial Lattices - American Rainbow Put Option
225. Pentanomial Lattices - Dual Reverse Strike American Call (3D Binomial)
226. Pentanomial Lattices - Dual Reverse Strike American Put (3D Binomial)
227. Pentanomial Lattices - Dual Strike American Call (3D Binomial)
228. Pentanomial Lattices - Dual Strike American Put (3D Binomial)
229. Pentanomial Lattices - European Rainbow Call Option
230. Pentanomial Lattices - European Rainbow Put Option
231. Pentanomial Lattices - Exchange of Two Assets American Put (3D Binomial)
232. Pentanomial Lattices - Maximum of Two Assets American Call (3D Binomial)
233. Pentanomial Lattices - Maximum of Two Assets American Put (3D Binomial)
234. Pentanomial Lattices - Minimum of Two Assets American Call (3D Binomial)
235. Pentanomial Lattices - Minimum of Two Assets American Put (3D Binomial)
236. Pentanomial Lattices - Portfolio American Call (3D Binomial)
237. Pentanomial Lattices - Portfolio American Put (3D Binomial)
238. Pentanomial Lattices - Spread of Two Assets American Call (3D Binomial)
239. Pentanomial Lattices - Spread of Two Assets American Put (3D Binomial)

List of Functions

Below is a comprehensive list of the functions in Modeling Toolkit that can be accessed either through the analytical DLL libraries or in Excel. Please keep checking back at the website for a more updated list. The software is continually evolving and newer applications and models are constantly added. Finally, the applicable Risk Simulator tools applicable when using the Modeling Toolkit are also listed at the end.

- | | | |
|---|--|--|
| 1. B2AEPMarketValueAsset | Market Value of Asset using the Asset-Equity Parity Model. | upper or below the lower barriers, and the payout is in the form of a call option on the underlying asset. |
| 2. B2AEPMarketValueDebt | Market Value of Debt using the Asset-Equity Parity Model. | 16. B2BarrierDoubleUpInDownInPut
Valuable or knocked in-the-money only if either barrier (upper or lower) is breached, i.e., asset value is above the upper or below the lower barriers, and the payout is in the form of a put option on the underlying asset. |
| 3. B2AEPRequiredReturnDebt | Required Return on Risky Debt using the Asset-Equity Parity Model. | 17. B2BarrierDoubleUpOutUpDownOutCall
Valuable or stays in-the-money only if either barrier (upper or lower barrier) is not breached, and the payout is in the form of a call option on the underlying asset. |
| 4. B2AltDistributionCallOption | Computes the European Call option for an underlying asset returns distribution with skew and kurtosis, and is not perfectly normal. May return an error for unsolvable inputs. | 18. B2BarrierDoubleUpOutUpDownOutPut
Valuable or stays in-the-money only if either barrier (upper or lower barrier) is not breached, and the payout is in the form of a put option on the underlying asset. |
| 5. B2AltDistributionPutOption | Computes the European Put option for an underlying asset returns distribution with skew and kurtosis, and is not perfectly normal. May return an error for unsolvable inputs. | 19. B2BarrierDownandInCall
Becomes valuable or knocked in-the-money if the lower barrier is breached, and the payout is the call option on the underlying asset. Sometimes, cash is paid at maturity assuming that the option has not been knocked in. |
| 6. B2AnnuityRate | Returns the percentage equivalent of the required periodic payment on an annuity (e.g., mortgage payments, loan repayment). Returns the percentage of the total principal at initiation. | 20. B2BarrierDownandInPut
Becomes valuable or knocked in-the-money if the lower barrier is breached, and the payout is the put option on the underlying asset. Sometimes, cash is paid at maturity assuming that the option has not been knocked in. |
| 7. B2AsianCallwithArithmeticAverageRate | An average rate option is a cash-settled option whose payoff is based on the difference between the arithmetic average value of the underlying during the life of the option and a fixed strike. | 21. B2BarrierDownandOutCall
Valuable or in-the-money only if the lower barrier is not breached, and the payout is the call option on the underlying asset. Sometimes, cash is paid at maturity assuming that the option has not been knocked out. |
| 8. B2AsianCallwithGeometricAverageRate | An average rate option is a cash-settled option whose payoff is based on the difference between the geometric average value of the underlying during the life of the option and a fixed strike. | 22. B2BarrierDownandOutPut
Valuable or in-the-money only if the lower barrier is not breached, and the payout is the put option on the underlying asset. Sometimes, cash is paid at maturity assuming that the option has not been knocked out. |
| 9. B2AsianPutwithArithmeticAverageRate | An average rate option is a cash-settled option whose payoff is based on the difference between a fixed strike and the arithmetic average value of the underlying during the life of the option. | 23. B2BarrierUpandInCall
Becomes valuable or knocked in-the-money if the upper barrier is breached, and the payout is the call option on the underlying asset. Sometimes, cash is paid at maturity assuming that the option has not been knocked in. |
| 10. B2AsianPutwithGeometricAverageRate | An average rate option is a cash-settled option whose payoff is based on the difference between a fixed strike and the geometric average value of the underlying during its life. | 24. B2BarrierUpandInPut
Becomes valuable or knocked in-the-money if the upper barrier is breached, and the payout is the put option on the underlying asset. Sometimes, cash is paid at maturity assuming that the option has not been knocked in. |
| 11. B2AssetExchangeAmericanOption | Option holder has the right at up to and including expiration to swap out Asset 2 and receive Asset 1, with predetermined quantities. | 25. B2BarrierUpandOutCall
Valuable or in-the-money only if the upper barrier is not breached, and the payout is the call option on the underlying asset. Sometimes, cash is paid at maturity assuming that the option has not been knocked out. |
| 12. B2AssetExchangeEuropeanOption | Option holder has the right at expiration to swap out Asset 2 and receive Asset 1, with predetermined quantities. | 26. B2BarrierUpandOutPut
Valuable or in-the-money only if the upper barrier is not breached, and the payout is the put option on the underlying asset. Sometimes, cash is paid at maturity assuming that the option has not been knocked out. |
| 13. B2AssetOrNothingCall | At expiration, if in the money, the option holder receives the stock or asset. For a call option, as long as the stock or asset price exceeds the strike at expiration, the stock is received. | 27. B2BDTAmericanCallonDebtLattice
Computes the American Call option on interest-based |
| 14. B2AssetOrNothingPut | At expiration, if in the money, the option holder receives the stock or asset. For a put option, stock is received only if the stock or asset value falls below the strike price. | |
| 15. B2BarrierDoubleUpInDownInCall | Valuable or knocked in-the-money only if either barrier (upper or lower) is breached, i.e., asset value is above the | |

	instruments and debt or bonds, and creates the entire pricing lattice.	
28.	B2BDTAmericanCallOnDebtValue Computes the American Call option value on interest-based instruments and debt or bonds, and returns only one value instead of the entire lattice.	44. B2BDTZeroPriceLattice Computes the straight price lattice of zero bonds based on a term structure of interest rates and changing interest volatilities, as a means to compute interest-based option values.
29.	B2BDTAmericanPutOnDebtLattice Computes the American Put option on interest-based instruments and debt or bonds, and creates the entire pricing lattice.	45. B2BDTZeroPriceLattice2 Computes the straight price lattice of zero bonds based on a term structure of interest rates and changing interest volatilities, as a means to compute interest-based option values. Returns the same results as the B2BDTZeroPriceLattice function but requires interest rates and interest volatilities as inputs, rather than the entire interest rate lattice.
30.	B2BDTAmericanPutOnDebtValue Computes the American Put option value on interest-based instruments and debt or bonds, and returns only one value instead of the entire lattice.	46. B2BDTZeroPriceValue Computes the straight price of zero bonds at time zero, based on a term structure of interest rates and changing interest volatilities, as a means to compute interest-based option values.
31.	B2BDTCallableDebtPriceLattice Computes the revised price lattice of a callable debt such that the options adjusted spread can be imputed. Allows for changing interest and interest volatilities over time.	47. B2BinaryDownAndInAssetAtExpirationOrNothing Binary digital instrument receiving the asset at expiration, only if a corresponding asset hits a lower barrier or receives nothing otherwise. DT is monitoring steps: 1/12 monthly, 1/52 weekly, 1/250 daily, 0 continuously
32.	B2BDTCallableDebtPriceValue Computes the present value of a coupon bond/debt that is callable, to see the differences in value from a non-callable debt. The lattice can be computed using the function call: B2BDTCallableDebtPriceLattice.	48. B2BinaryDownAndInAssetAtExpirationOrNothingCall Binary digital call option receiving the asset at expiration if the asset hits a lower barrier or receives nothing otherwise. DT is monitoring steps: 1/12 monthly, 1/52 weekly, 1/250 daily, 0 continuously
33.	B2BDTCallableSpreadValue Computes the option adjusted spread, i.e., the additional premium that should be charged on the callable option provision.	49. B2BinaryDownAndInAssetAtExpirationOrNothingPut Binary digital put option receiving the asset at expiration if the asset hits a lower barrier or receives nothing otherwise. DT is monitoring steps: 1/12 monthly, 1/52 weekly, 1/250 daily, 0 continuously
34.	B2BDTEuropeanCallOnDebtLattice Computes the European Call option on interest-based instruments and debt or bonds, and creates the entire pricing lattice.	50. B2BinaryDownAndInAssetAtHitOrNothing Binary digital instrument receiving the asset when it hits a lower barrier or receives nothing otherwise. DT is monitoring steps: 1/12 monthly, 1/52 weekly, 1/250 daily, 0 continuously
35.	B2BDTEuropeanCallOnDebtValue Computes the European Call option value on interest-based instruments and debt or bonds, and returns only one value instead of the entire lattice.	51. B2BinaryDownAndInCashAtExpirationOrNothing Binary digital instrument receiving a cash amount at expiration, only if a corresponding asset hits a lower barrier or receives nothing otherwise. DT is monitoring steps: 1/12 monthly, 1/52 weekly, 1/250 daily, 0 continuously
36.	B2BDTEuropeanPutOnDebtLattice Computes the European Put option on interest-based instruments and debt or bonds, and creates the entire pricing lattice.	52. B2BinaryDownAndInCashAtExpirationOrNothingCall Binary digital call option receiving the cash at expiration if the asset hits a lower barrier or receives nothing otherwise. DT is monitoring steps: 1/12 monthly, 1/52 weekly, 1/250 daily, 0 continuously
37.	B2BDTEuropeanPutOnDebtValue Computes the European Put option value on interest-based instruments and debt or bonds, and returns only one value instead of the entire lattice.	53. B2BinaryDownAndInCashAtExpirationOrNothingPut Binary digital put option receiving the cash at expiration if the asset hits a lower barrier or receives nothing otherwise. DT is monitoring steps: 1/12 monthly, 1/52 weekly, 1/250 daily, 0 continuously
38.	B2BDTFloatingCouponPriceLattice Value of the floater bond's lattice (coupon rate is floating and can be directly or inversely related to interest rates; e.g., rates drop, coupon increases, the bond appreciates in price and the yield increases).	54. B2BinaryDownAndInCashAtHitOrNothing Binary digital instrument receiving a cash amount when a corresponding asset hits a lower barrier or receives nothing otherwise. DT is monitoring steps: 1/12 monthly, 1/52 weekly, 1/250 daily, 0 continuously
39.	B2BDTFloatingCouponPriceValue Value of the floater bond (coupon rate is floating and can be directly or inversely related to interest rates; e.g., rates drop, coupon increases, the bond appreciates in price and the yield increases).	55. B2BinaryDownAndOutAssetAtExpirationOrNothing Binary digital instrument receiving the asset at expiration, only if a corresponding asset does not hit a lower barrier or receives nothing otherwise. DT is monitoring steps: 1/12 monthly, 1/52 weekly, 1/250 daily, 0 continuously
40.	B2BDTNoncallableDebtPriceLattice Computes the pricing lattice of a coupon bond/debt that is not callable, to see the differences in value from a callable debt.	56. B2BinaryDownAndOutAssetAtExpirationOrNothingCall Binary digital call options receiving the asset at expiration, only if a corresponding asset does not hit a lower barrier or receives nothing otherwise. DT is monitoring steps: 1/12 monthly, 1/52 weekly, 1/250 daily, 0 continuously
41.	B2BDTNoncallableDebtPriceValue Computes the present value of a coupon bond/debt that is not callable, to see the differences from a callable debt.	57. B2BinaryDownAndOutAssetAtExpirationOrNothingPut Binary digital put options receiving the asset at expiration, only if a corresponding asset does not hit a lower barrier or receives nothing otherwise. DT is monitoring steps: 1/12 monthly, 1/52 weekly, 1/250 daily, 0 continuously
42.	B2BDTInterestRateLattice Computes the short rate interest lattice based on a term structure of interest rates and changing interest volatilities, as a means to compute option values.	
43.	B2BDTNonCallableSpreadValue Computes the straight spread on a bond that is non-callable in order to compare it with the option provision of an option adjusted spread model.	

	Binary digital put options receiving the asset at expiration, only if a corresponding asset does not hit a lower barrier or receives nothing otherwise. DT is monitoring steps: 1/12 monthly, 1/52 weekly, 1/250 daily, 0 continuously	
58.	B2BinaryDownAndOutCashAtExpirationOrNothing Binary digital instrument receiving a cash amount at expiration, only if a corresponding asset does not hit a lower barrier or receives nothing otherwise. DT is monitoring steps: 1/12 monthly, 1/52 weekly, 1/250 daily, 0 continuously	71. B2BinaryUpAndOutAssetAtExpirationOrNothingPut Binary digital put options receiving the asset at expiration, only if a corresponding asset does not hit an upper barrier or receives nothing otherwise. DT is monitoring steps: 1/12 monthly, 1/52 weekly, 1/250 daily, 0 continuously
59.	B2BinaryDownAndOutCashAtExpirationOrNothingCall Binary digital call option receiving a cash amount at expiration, only if a corresponding asset does not hit a lower barrier or receives nothing otherwise. DT is monitoring steps: 1/12 monthly, 1/52 weekly, 1/250 daily, 0 continuously	72. B2BinaryUpAndOutCashAtExpirationOrNothing Binary digital instrument receiving a cash amount at expiration, only if a corresponding asset does not hit an upper barrier or receives nothing otherwise. DT is monitoring steps: 1/12 monthly, 1/52 weekly, 1/250 daily, 0 continuously
60.	B2BinaryDownAndOutCashAtExpirationOrNothingPut Binary digital put option receiving a cash amount at expiration, only if a corresponding asset does not hit a lower barrier or receives nothing otherwise. DT is monitoring steps: 1/12 monthly, 1/52 weekly, 1/250 daily, 0 continuously	73. B2BinaryUpAndOutCashAtExpirationOrNothingCall Binary digital call option receiving a cash amount at expiration, only if a corresponding asset does not hit an upper barrier or receives nothing otherwise. DT is monitoring steps: 1/12 monthly, 1/52 weekly, 1/250 daily, 0 continuously
61.	B2BinaryUpAndInAssetAtExpirationOrNothing Binary digital instrument receiving the asset at expiration, only if a corresponding asset hits an upper barrier or receives nothing otherwise. DT is monitoring steps: 1/12 monthly, 1/52 weekly, 1/250 daily, 0 continuously	74. B2BinaryUpAndOutCashAtExpirationOrNothingPut Binary digital put option receiving a cash amount at expiration, only if a corresponding asset does not hit an upper barrier or receives nothing otherwise. DT is monitoring steps: 1/12 monthly, 1/52 weekly, 1/250 daily, 0 continuously
62.	B2BinaryUpAndInAssetAtExpirationOrNothingCall Binary digital call option receiving the asset at expiration if the asset hits an upper barrier or receives nothing otherwise. DT is monitoring steps: 1/12 monthly, 1/52 weekly, 1/250 daily, 0 continuously	75. B2Binomial3DAmericanDualStrikeCallOption Returns the American option with the payoff [Max(Q2S2-X2,Q1S1-X1)] and valued using a 3D binomial lattice model.
63.	B2BinaryUpAndInAssetAtExpirationOrNothingPut Binary digital put option receiving the asset at expiration if the asset hits an upper barrier or receives nothing otherwise. DT is monitoring steps: 1/12 monthly, 1/52 weekly, 1/250 daily, 0 continuously	76. B2Binomial3DAmericanDualStrikePutOption Returns the American option with the payoff [Max(X2-Q2S2,X1-Q1S1)] and valued using a 3D binomial lattice model.
64.	B2BinaryUpAndInAssetAtHitOrNothing Binary digital instrument receiving the asset when it hits an upper barrier or receives nothing otherwise. DT is monitoring steps: 1/12 monthly, 1/52 weekly, 1/250 daily, 0 continuously	77. B2Binomial3DEuropeanDualStrikeCallOption Returns the European option with the payoff [Max(Q2S2-X2,Q1S1-X1)] and valued using a 3D binomial lattice model.
65.	B2BinaryUpAndInCashAtExpirationOrNothing Binary digital instrument receiving a cash amount at expiration, only if a corresponding asset hits an upper barrier or receives nothing otherwise. DT is monitoring steps: 1/12 monthly, 1/52 weekly, 1/250 daily, 0 continuously	78. B2Binomial3DEuropeanDualStrikePutOption Returns the European option with the payoff [Max(X2-Q2S2,X1-Q1S1)] and valued using a 3D binomial lattice model.
66.	B2BinaryUpAndInCashAtExpirationOrNothingCall Binary digital call option receiving the cash at expiration if the asset hits an upper barrier or receives nothing otherwise. DT is monitoring steps: 1/12 monthly, 1/52 weekly, 1/250 daily, 0 continuously	79. B2Binomial3DAmericanExchangeOption Returns the American and European call and put option (same values exist for all types) with the payoff [Q2S2-Q1S1] and valued using a 3D binomial lattice model.
67.	B2BinaryUpAndInCashAtExpirationOrNothingPut Binary digital put option receiving the cash at expiration if the asset hits an upper barrier or receives nothing otherwise. DT is monitoring steps: 1/12 monthly, 1/52 weekly, 1/250 daily, 0 continuously	80. B2Binomial3DAmericanMaximumTwoAssetsCallOption Returns the American option with the payoff [Max(Q2S2,Q1S1)-X] and valued using a 3D binomial lattice model.
68.	B2BinaryUpAndInCashAtHitOrNothing Binary digital instrument receiving a cash amount when a corresponding asset hits an upper barrier or receives nothing otherwise. DT is monitoring steps: 1/12 monthly, 1/52 weekly, 1/250 daily, 0 continuously	81. B2Binomial3DAmericanMaximumTwoAssetsPutOption Returns the American option with the payoff [X-Max(Q2S2,Q1S1)] and valued using a 3D binomial lattice model.
69.	B2BinaryUpAndOutAssetAtExpirationOrNothing Binary digital instrument receiving the asset at expiration, only if a corresponding asset does not hit an upper barrier or receives nothing otherwise. DT is monitoring steps: 1/12 monthly, 1/52 weekly, 1/250 daily, 0 continuously	82. B2Binomial3DEuropeanMaximumTwoAssetsCallOption Returns the European option with the payoff [Max(Q2S2,Q1S1)-X] and valued using a 3D binomial lattice model.
70.	B2BinaryUpAndOutAssetAtExpirationOrNothingCall Binary digital call options receiving the asset at expiration, only if a corresponding asset does not hit an upper barrier or receives nothing otherwise. DT is monitoring steps: 1/12 monthly, 1/52 weekly, 1/250 daily, 0 continuously	83. B2Binomial3DEuropeanMaximumTwoAssetsPutOption Returns the European option with the payoff [X-Max(Q2S2,Q1S1)] and valued using a 3D binomial lattice model.
		84. B2Binomial3DAmericanMinimumTwoAssetsCallOption Returns the American option with the payoff [Min(Q2S2,Q1S1)-X] and valued using a 3D binomial lattice model.
		85. B2Binomial3DAmericanMinimumTwoAssetsPutOption Returns the American option with the payoff [X-Min(Q2S2,Q1S1)] and valued using a 3D binomial lattice model.
		86. B2Binomial3DEuropeanMinimumTwoAssetsCallOption Returns the European option with the payoff [Min(Q2S2,Q1S1)-X] and valued using a 3D binomial lattice model.
		87. B2Binomial3DEuropeanMinimumTwoAssetsPutOption Returns the European option with the payoff [X-

	$\text{Min}(\text{Q2S2}, \text{Q1S1})]$ and valued using a 3D binomial lattice model.	yield using a binomial lattice, where the option can be exercised only at maturity.
88.	B2Binomial3DAmericanPortfolioCallOption Returns the American option with the payoff $[\text{Q2S2} + \text{Q1S1} - \text{X}]$ and valued using a 3D binomial lattice model.	107. B2BlackCallOptionModel Returns the Black model (modified Black-Scholes-Merton) for forward contracts and interest-based call options.
89.	B2Binomial3DAmericanPortfolioPutOption Returns the American option with the payoff $[\text{X} - \text{Q2S2} - \text{Q1S1}]$ and valued using a 3D binomial lattice model.	108. B2BlackPutOptionModel Returns the Black model (modified Black-Scholes-Merton) for forward contracts and interest-based put options.
90.	B2Binomial3DEuropeanPortfolioCallOption Returns the European option with the payoff $[\text{Q2S2} + \text{Q1S1} - \text{X}]$ and valued using a 3D binomial lattice model.	109. B2BlackFuturesCallOption Computes the value of commodities futures call option given the value of the futures contract.
91.	B2Binomial3DEuropeanPortfolioPutOption Returns the European option with the payoff $[\text{X} - \text{Q2S2} - \text{Q1S1}]$ and valued using a 3D binomial lattice model.	110. B2BlackFuturesPutOption Computes the value of commodities futures put option given the value of the futures contract.
92.	B2Binomial3DAmericanReverseDualStrikeCallOption Returns the American option with the payoff $[\text{Max}(\text{X2} - \text{Q2S2}, \text{Q1S1} - \text{X1})]$ and valued using a 3D binomial lattice model.	111. B2BlackScholesCall European Call Option using Black-Scholes-Merton Model.
93.	B2Binomial3DAmericanReverseDualStrikePutOption Returns the American option with the payoff $[\text{Max}(\text{Q2S2} - \text{X2}, \text{X1} - \text{Q1S1})]$ and valued using a 3D binomial lattice model.	112. B2BlackScholesProbabilityAbove Computes the expected probability the stock price will rise above the strike price under a Black-Scholes paradigm.
94.	B2Binomial3DEuropeanReverseDualStrikeCallOption Returns the European option with the payoff $[\text{Max}(\text{X2} - \text{Q2S2}, \text{Q1S1} - \text{X1})]$ and valued using a 3D binomial lattice model.	113. B2BlackScholesPut European Put Option using Black-Scholes-Merton Model.
95.	B2Binomial3DEuropeanReverseDualStrikePutOption Returns the American option with the payoff $[\text{Max}(\text{Q2S2} - \text{X2}, \text{X1} - \text{Q1S1})]$ and valued using a 3D binomial lattice model.	114. B2BondCIRBondDiscountFactor Returns the discount factor on a bond or risky debt using the Cox-Ingersoll-Ross model, accounting for mean-reverting interest rates.
96.	B2Binomial3DAmericanSpreadCallOption Returns the American option with the payoff $[\text{Q1S1} - \text{Q2S2} - \text{X}]$ and valued using a 3D binomial lattice model.	115. B2BondCIRBondPrice Cox-Ross model on Zero Coupon Bond Pricing assuming no arbitrage and mean-reverting interest rates.
97.	B2Binomial3DAmericanSpreadPutOption Returns the American option with the payoff $[\text{X} + \text{Q2S2} - \text{Q1S1}]$ and valued using a 3D binomial lattice model.	116. B2BondCIRBondYield Cox-Ross model on Zero Coupon Bond Yield assuming no arbitrage and mean-reverting interest rates.
98.	B2Binomial3DEuropeanSpreadCallOption Returns the European option with the payoff $[\text{Q1S1} - \text{Q2S2} - \text{X}]$ and valued using a 3D binomial lattice model.	117. B2BondConvexityContinuous Returns the debt's Convexity of second order sensitivity using a series of cash flows and current interest rate, with continuous discounting.
99.	B2Binomial3DEuropeanSpreadPutOption Returns the European option with the payoff $[\text{X} + \text{Q2S2} - \text{Q1S1}]$ and valued using a 3D binomial lattice model.	118. B2BondConvexityDiscrete Returns the debt's Convexity of second order sensitivity using a series of cash flows and current interest rate, with discrete discounting.
100.	B2BinomialAdjustedBarrierSteps Computes the correct binomial lattice steps to use for convergence and barrier matching when running a barrier option.	119. B2BondConvexityYTMContinuous Returns debt's Convexity or second order sensitivity using an internal Yield to Maturity of the cash flows, with continuous discounting.
101.	B2BinomialAmericanCall Returns the American call option with a continuous dividend yield using a binomial lattice, where the option can be exercised at any time up to and including maturity.	120. B2BondConvexityYTMDiscrete Returns debt's Convexity or second order sensitivity using an internal Yield to Maturity of the cash flows, with discrete discounting.
102.	B2BinomialAmericanPut Returns the American put option with a continuous dividend yield using a binomial lattice, where the option can be exercised at any time up to and including maturity.	121. B2BondDurationContinuous Returns the debt's first order sensitivity Duration measure using continuous discounting.
103.	B2BinomialBermudanCall Returns the American call option with a continuous dividend yield using a binomial lattice, where the option can be exercised at any time up to and including maturity except during the vesting period.	122. B2BondDurationDiscrete Returns the debt's first order sensitivity Duration measure using discrete discounting.
104.	B2BinomialBermudanPut Returns the American put option with a continuous dividend yield using a binomial lattice, where the option can be exercised at any time up to and including maturity except during the vesting period.	123. B2BondHullWhiteBondCallOption Values a European call option on a bond where the interest rates are stochastic and mean-reverting. Make sure Bond Maturity > Option Maturity.
105.	B2BinomialEuropeanCall Returns the European call option with a continuous dividend yield using a binomial lattice, where the option can be exercised only at maturity.	124. B2BondHullWhiteBondPutOption Values a European put option on a bond where the interest rates are stochastic and mean-reverting. Make sure Bond Maturity > Option Maturity.
106.	B2BinomialEuropeanPut Returns the European put option with a continuous dividend	125. B2BondMacaulayDuration Returns the debt's first order sensitivity Macaulay's Duration measure.
		126. B2BondMertonBondPrice Bond Price using Merton Stochastic Interest and Stochastic Asset Model.
		127. B2BondModifiedDuration

	Returns the debt's first order sensitivity Modified Duration measure.
128.	B2BondPriceContinuous Returns the Bond Price of a cash flow series given the time and discount rate, using Continuous discounting.
129.	B2BondPriceDiscrete Returns the Bond Price of a cash flow series given the time and discount rate, using discrete discounting.
130.	B2BondVasicekBondCallOption Values a European call option on a bond where the interest rates are stochastic and mean-reverting to a long-term rate. Make sure Bond Maturity > Option Maturity.
131.	B2BondVasicekBondPrice Vasicek Zero Coupon Price assuming no arbitrage and mean-reverting interest rates.
132.	B2BondVasicekBondPutOption Values a European put option on a bond where the interest rates are stochastic and mean-reverting to a long-term rate. Make sure Bond Maturity > Option Maturity.
133.	B2BondVasicekBondYield Vasicek Zero Coupon Yield assuming no arbitrage and mean-reverting interest rates.
134.	B2BondYTMContinuous Returns Bond's Yield to Maturity assuming Continuous discounting.
135.	B2BondYTMDiscrete Returns Bond's Yield to Maturity assuming discrete discounting.
136.	B2CallDelta Returns the option valuation sensitivity Delta (a call option value's sensitivity to changes in the asset value).
137.	B2CallGamma Returns the option valuation sensitivity Gamma (a call option value's sensitivity to changes in the delta value).
138.	B2CallOptionOnTheMax The maximum values at expiration of both assets are used in option exercise, where the call option payoff at expiration is the maximum price between Asset 1 and Asset 2 against the strike price.
139.	B2CallOptionOnTheMin The minimum values at expiration of both assets are used in option exercise, where the call option payoff at expiration is the minimum price between Asset 1 and Asset 2 against the strike price.
140.	B2CallRho Returns the option valuation sensitivity Rho (a call option value's sensitivity to changes in the interest rate).
141.	B2CallTheta Returns the option valuation sensitivity Theta (a call option value's sensitivity to changes in the maturity).
142.	B2CallVega Returns the option valuation sensitivity Vega (a call option value's sensitivity to changes in the volatility).
143.	B2CashOrNothingCall At expiration, if the option is in the money, the option holder receives a predetermined cash payment. For a call option, as long as the stock or asset price exceeds the strike at expiration, cash is received.
144.	B2CashOrNothingPut At expiration, if the option is in the money, the option holder receives a predetermined cash payment. For a put option, cash is received only if the stock or asset value falls below the strike price.
145.	B2ChooserBasicOption Holder chooses if the option is a call or a put by the chooser time, with the same strike price and maturity. Typically cheaper than buying a call and a put together while providing the same level of hedge.
146.	B2ChooserComplexOption Holder gets to choose if the option is a call or a put within the Chooser Time, with different strike prices and maturities. Typically cheaper than buying a call and a put, while providing the same level of hedge.
147.	B2ClosedFormAmericanCall Returns the American option approximation model with a continuous dividend yield call option.
148.	B2ClosedFormAmericanPut Returns the American option approximation model with a continuous dividend yield put option.
149.	B2CoefficientofVariationPopulation Computes the population coefficient of variation (standard deviation of the sample divided by the mean), to obtain a relative measure of risk and dispersion
150.	B2CoefficientofVariationSample Computes the sample coefficient of variation (standard deviation of the sample divided by the mean), to obtain a relative measure of risk and dispersion
151.	B2CommodityCallOptionModel Computes the value of a commodity-based call option based on spot and futures market, and accounting for volatility of the forward rate.
152.	B2CommodityPutOptionModel Computes the value of a commodity-based put option based on spot and futures market, and accounting for volatility of the forward rate.
153.	B2CompoundOptionsCallonCall A compound option allowing the holder to buy (call) a call option with some maturity, in the future within the option maturity period, for a specified strike price on the option.
154.	B2CompoundOptionsCallonPut A compound option allowing the holder to buy (call) a put option with some maturity, in the future within the option maturity period, for a specified strike price on the option.
155.	B2CompoundOptionsPutonCall A compound option allowing the holder to sell (put) a call option with some maturity, in the future within the option maturity period, for a specified strike price on the option.
156.	B2CompoundOptionsPutonPut A compound option allowing the holder to sell (put) a call option with some maturity, in the future within the option maturity period, for a specified strike price on the option.
157.	B2ConvenienceYield The convenience yield is simply the rate differential between a non-arbitrage futures and spot price and a real-life fair market value of the futures price.
158.	B2ConvertibleBondAmerican Computes the value of a convertible bond using binomial lattices, and accounting for the stock's volatility and dividend yield, as well as the bond's credit spread above risk-free.
159.	B2ConvertibleBondEuropean Computes the value of a convertible bond using binomial lattices, and accounting for the stock's volatility and dividend yield, as well as the bond's credit spread above risk-free.
160.	B2CreditAcceptanceCost Computes the risk-adjusted cost of accepting a new credit line with a probability of default.
161.	B2CreditAssetSpreadCallOption Provides protection from an increase in spread but ceases to exist if the underlying asset defaults and is based on the price of the asset.
162.	B2CreditAssetSpreadPutOption Provides protection from a decrease in spread but ceases to exist if the underlying asset defaults and is based on the price of the asset.
163.	B2CreditDefaultSwapSpread Returns the valuation of a credit default swap CDS spread,

	allowing the holder to sell a bond/debt at par value when a credit event occurs.	perform a Delta-Gamma neutral hedge. Returns a negative value indicating cash outflow.
164.	B2CreditDefaultSwapCorrelatedBondandSwapPrice Computes the valuation of a bond with a credit default swap where both parties are correlated and each has a probability of default and possible recovery rates. At default, the holder receives the notional principal or par value of the bond.	B2DeltaHedgeCallSold Computes the single unit of call value that has to be sold to perform a Delta-neutral hedge. Returns a positive value indicating cash inflow.
165.	B2CreditDefaultSwapCorrelatedBondPrice Computes the valuation of a bond without any credit default swap where the bond or debt has a probability of default and possible recovery rate.	B2DeltaHedgeMoneyBorrowed Computes the amount of money that has to be borrowed to perform a Delta-neutral hedge. Returns a positive value indicating cash inflow.
166.	B2CreditDefaultSwapCorrelatedSwapPrice Computes the price of a credit default swap where both parties are correlated and each has a probability of default and possible recovery rates. At default, the holder receives the notional principal or par value of the bond.	B2DeltaHedgeSharesBought Computes the total value of stocks that has to be bought to perform a Delta-neutral hedge. Returns a negative value indicating cash outflow.
167.	B2CreditRatingWidth Computes the credit ratings width to generate the credit ratings table.	B2DistributionBernoulliKurtosis Returns the Bernoulli distribution's theoretical excess kurtosis (fourth moment), measuring the peakedness of the distribution and its extreme tail events. An excess kurtosis of 0 implies a normal tail.
168.	B2CreditRejectionCost Computes the risk-adjusted cost of rejecting a new credit line with a probability of default.	B2DistributionBernoulliMean Returns the Bernoulli distribution's theoretical mean or expected value (first moment), measuring the central tendency of the distribution.
169.	B2CreditRiskShortfall Returns the Credit Risk Shortfall given probability of default and recovery rates.	B2DistributionBernoulliSkew Returns the Bernoulli distribution's theoretical skew (third moment), measuring the direction of the distribution's tail. Positive (negative) skew means mean exceeds (is less than) median and the tail points to the right (left).
170.	B2CreditSpreadCallOption Provides protection from an increase in spread but ceases to exist if the underlying asset defaults. Only credit default swaps can cover default events (CSOs are sometimes combined with CDSs).	B2DistributionBernoulliStdev Returns the Bernoulli distribution's theoretical standard deviation (second moment), measuring the width and average dispersion of all points around the mean.
171.	B2CreditSpreadPutOption Provides protection from a decrease in spread but ceases to exist if the underlying asset defaults. Only credit default swaps can cover default events (CSOs are sometimes combined with CDSs).	B2DistributionBetaKurtosis Returns the Beta distribution's theoretical excess kurtosis (fourth moment), measuring the peakedness of the distribution and its extreme tail events. An excess kurtosis of 0 implies a normal tail.
172.	B2CubicSpline Interpolates and extrapolates the unknown Y values (based on the required X value) given some series of known X and Y values, and can be used to interpolate inside the data sample or extrapolate outside the known sample.	B2DistributionBetaMean Returns the Beta distribution's theoretical mean or expected value (first moment), measuring the central tendency of the distribution.
173.	B2CurrencyCallOption Option to exchange foreign currency into domestic currency by buying domestic currency (selling foreign currency) at a set exchange rate on a specified date. Exchange rate is foreign currency to domestic currency.	B2DistributionBetaSkew Returns the Beta distribution's theoretical skew (third moment), measuring the direction of the distribution's tail. Positive (negative) skew means mean exceeds (is less than) median and the tail points to the right (left).
174.	B2CurrencyForwardCallOption Computes the value of a currency forward call option.	B2DistributionBetaStdev Returns the Beta distribution's theoretical standard deviation (second moment), measuring the width and average dispersion of all points around the mean.
175.	B2CurrencyForwardPutOption Computes the value of a currency forward put option.	B2DistributionBinomialKurtosis Returns the Binomial distribution's theoretical excess kurtosis (fourth moment), measuring the peakedness of the distribution and its extreme tail events. An excess kurtosis of 0 implies a normal tail.
176.	B2CurrencyPutOption Option to exchange domestic currency into foreign currency by selling domestic currency (buying foreign currency) at a set exchange rate on a specified date. Exchange rate is foreign currency to domestic currency.	B2DistributionBinomialMean Returns the Binomial distribution's theoretical mean or expected value (first moment), measuring the central tendency of the distribution.
177.	B2DeltaGammaHedgeCallBought Computes the total amount of call values that has to be bought to perform a Delta-Gamma neutral hedge. Returns a negative value indicating cash outflow.	B2DistributionBinomialSkew Returns the Binomial distribution's theoretical skew (third moment), measuring the direction of the distribution's tail. Positive (negative) skew means mean exceeds (is less than) median and the tail points to the right (left).
178.	B2DeltaGammaHedgeCallSold Computes the single unit of call value that has to be sold to perform a Delta-Gamma neutral hedge. Returns a positive value indicating cash inflow.	B2DistributionBinomialStdev Returns the Binomial distribution's theoretical standard deviation (second moment), measuring the width and average dispersion of all points around the mean.
179.	B2DeltaGammaHedgeMoneyBorrowed Computes the amount of money that has to be borrowed to perform a Delta-Gamma neutral hedge. Returns a positive value indicating cash inflow.	
180.	B2DeltaGammaHedgeSharesBought Computes the total value of stocks that has to be bought to	

196. **B2DistributionCauchyKurtosis**
Returns the Cauchy distribution's theoretical excess kurtosis (fourth moment), measuring the peakedness of the distribution and its extreme tail events. An excess kurtosis of 0 implies a normal tail.
197. **B2DistributionCauchyMean**
Returns the Cauchy distribution's theoretical mean or expected value (first moment), measuring the central tendency of the distribution.
198. **B2DistributionCauchySkew**
Returns the Cauchy distribution's theoretical skew (third moment), measuring the direction of the distribution's tail. Positive (negative) skew means mean exceeds (is less than) median and the tail points to the right (left).
199. **B2DistributionCauchyStdev**
Returns the Cauchy distribution's theoretical standard deviation (second moment), measuring the width and average dispersion of all points around the mean.
200. **B2DistributionChiSquareKurtosis**
Returns the Chi-Square distribution's theoretical excess kurtosis (fourth moment), measuring the peakedness of the distribution and its extreme tail events. An excess kurtosis of 0 implies a normal tail.
201. **B2DistributionChiSquareMean**
Returns the Chi-Square distribution's theoretical mean or expected value (first moment), measuring the central tendency of the distribution.
202. **B2DistributionChiSquareSkew**
Returns the Chi-Square distribution's theoretical skew (third moment), measuring the direction of the distribution's tail. Positive (negative) skew means mean exceeds (is less than) median and the tail points to the right (left).
203. **B2DistributionChiSquareStdev**
Returns the Chi-Square distribution's theoretical standard deviation (second moment), measuring the width and average dispersion of all points around the mean.
204. **B2DistributionDiscreteUniformKurtosis**
Returns the Discrete Uniform distribution's theoretical excess kurtosis (fourth moment), measuring the peakedness of the distribution and its extreme tail events. An excess kurtosis of 0 implies a normal tail.
205. **B2DistributionDiscreteUniformMean**
Returns the Discrete Uniform distribution's theoretical mean or expected value (first moment), measuring the central tendency of the distribution.
206. **B2DistributionDiscreteUniformSkew**
Returns the Discrete Uniform distribution's theoretical skew (third moment), measuring the direction of the distribution's tail. Positive (negative) skew means mean exceeds (is less than) median and the tail points to the right (left).
207. **B2DistributionDiscreteUniformStdev**
Returns the Discrete Uniform distribution's theoretical standard deviation (second moment), measuring the width and average dispersion of all points around the mean.
208. **B2DistributionExponentialKurtosis**
Returns the Exponential distribution's theoretical excess kurtosis (fourth moment), measuring the peakedness of the distribution and its extreme tail events. An excess kurtosis of 0 implies a normal tail.
209. **B2DistributionExponentialMean**
Returns the Exponential distribution's theoretical mean or expected value (first moment), measuring the central tendency of the distribution.
210. **B2DistributionExponentialSkew**
Returns the Exponential distribution's theoretical skew (third moment), measuring the direction of the distribution's tail. Positive (negative) skew means mean exceeds (is less than) median and the tail points to the right (left).
211. **B2DistributionExponentialStdev**
Returns the Exponential distribution's theoretical standard deviation (second moment), measuring the width and average dispersion of all points around the mean.
212. **B2DistributionFKurtosis**
Returns the F distribution's theoretical excess kurtosis (fourth moment), measuring the peakedness of the distribution and its extreme tail events. An excess kurtosis of 0 implies a normal tail.
213. **B2DistributionFMean**
Returns the F distribution's theoretical mean or expected value (first moment), measuring the central tendency of the distribution.
214. **B2DistributionFSkew**
Returns the F distribution's theoretical skew (third moment), measuring the direction of the distribution's tail. Positive (negative) skew means mean exceeds (is less than) median and the tail points to the right (left).
215. **B2DistributionFStdev**
Returns the F distribution's theoretical standard deviation (second moment), measuring the width and average dispersion of all points around the mean.
216. **B2DistributionGammaKurtosis**
Returns the Gamma distribution's theoretical excess kurtosis (fourth moment), measuring the peakedness of the distribution and its extreme tail events. An excess kurtosis of 0 implies a normal tail.
217. **B2DistributionGammaMean**
Returns the Gamma distribution's theoretical mean or expected value (first moment), measuring the central tendency of the distribution.
218. **B2DistributionGammaSkew**
Returns the Gamma distribution's theoretical skew (third moment), measuring the direction of the distribution's tail. Positive (negative) skew means mean exceeds (is less than) median and the tail points to the right (left).
219. **B2DistributionGammaStdev**
Returns the Gamma distribution's theoretical standard deviation (second moment), measuring the width and average dispersion of all points around the mean.
220. **B2DistributionGeometricKurtosis**
Returns the Geometric distribution's theoretical excess kurtosis (fourth moment), measuring the peakedness of the distribution and its extreme tail events. An excess kurtosis of 0 implies a normal tail.
221. **B2DistributionGeometricMean**
Returns the Geometric distribution's theoretical mean or expected value (first moment), measuring the central tendency of the distribution.
222. **B2DistributionGeometricSkew**
Returns the Geometric distribution's theoretical skew (third moment), measuring the direction of the distribution's tail. Positive (negative) skew means mean exceeds (is less than) median and the tail points to the right (left).
223. **B2DistributionGeometricStdev**
Returns the Geometric distribution's theoretical standard deviation (second moment), measuring the width and average dispersion of all points around the mean.
224. **B2DistributionGumbelMaxKurtosis**
Returns the Gumbel Max distribution's theoretical excess kurtosis (fourth moment), measuring the peakedness of the distribution and its extreme tail events. An excess kurtosis of 0 implies a normal tail.
225. **B2DistributionGumbelMaxMean**
Returns the Gumbel Max distribution's theoretical mean or expected value (first moment), measuring the central tendency of the distribution.
226. **B2DistributionGumbelMaxSkew**

	Returns the Gumbel Max distribution's theoretical skew (third moment), measuring the direction of the distribution's tail. Positive (negative) skew means mean exceeds (is less than) median and the tail points to the right (left).	Returns the Lognormal distribution's theoretical mean or expected value (first moment), measuring the central tendency of the distribution.
227.	B2DistributionGumbelMaxSkew	Returns the Lognormal distribution's theoretical skew (third moment), measuring the direction of the distribution's tail. Positive (negative) skew means mean exceeds (is less than) median and the tail points to the right (left).
228.	B2DistributionGumbelMinKurtosis	Returns the Lognormal distribution's theoretical standard deviation (second moment), measuring the width and average dispersion of all points around the mean.
229.	B2DistributionGumbelMinMean	Returns the Gumbel Min distribution's theoretical excess kurtosis (fourth moment), measuring the peakedness of the distribution and its extreme tail events. An excess kurtosis of 0 implies a normal tail.
230.	B2DistributionGumbelMinSkew	Returns the Gumbel Min distribution's theoretical mean or expected value (first moment), measuring the central tendency of the distribution.
231.	B2DistributionGumbelMinStdev	Returns the Gumbel Min distribution's theoretical skew (third moment), measuring the direction of the distribution's tail. Positive (negative) skew means mean exceeds (is less than) median and the tail points to the right (left).
232.	B2DistributionHypergeometricKurtosis	Returns the Hypergeometric distribution's theoretical standard deviation (second moment), measuring the width and average dispersion of all points around the mean.
233.	B2DistributionHypergeometricMean	Returns the Hypergeometric distribution's theoretical excess kurtosis (fourth moment), measuring the peakedness of the distribution and its extreme tail events. An excess kurtosis of 0 implies a normal tail.
234.	B2DistributionHypergeometricSkew	Returns the Hypergeometric distribution's theoretical mean or expected value (first moment), measuring the central tendency of the distribution.
235.	B2DistributionHypergeometricStdev	Returns the Hypergeometric distribution's theoretical skew (third moment), measuring the direction of the distribution's tail. Positive (negative) skew means mean exceeds (is less than) median and the tail points to the right (left).
236.	B2DistributionLogisticKurtosis	Returns the Logistic distribution's theoretical standard deviation (second moment), measuring the width and average dispersion of all points around the mean.
237.	B2DistributionLogisticMean	Returns the Logistic distribution's theoretical excess kurtosis (fourth moment), measuring the peakedness of the distribution and its extreme tail events. An excess kurtosis of 0 implies a normal tail.
238.	B2DistributionLogisticsSkew	Returns the Logistic distribution's theoretical mean or expected value (first moment), measuring the central tendency of the distribution.
239.	B2DistributionLogisticStdev	Returns the Logistic distribution's theoretical skew (third moment), measuring the direction of the distribution's tail. Positive (negative) skew means mean exceeds (is less than) median and the tail points to the right (left).
240.	B2DistributionLognormalKurtosis	Returns the Logistic distribution's theoretical standard deviation (second moment), measuring the width and average dispersion of all points around the mean.
241.	B2DistributionLognormalMean	Returns the Lognormal distribution's theoretical excess kurtosis (fourth moment), measuring the peakedness of the distribution and its extreme tail events. An excess kurtosis of 0 implies a normal tail.
242.	B2DistributionLognormalSkew	Returns the Lognormal distribution's theoretical mean or expected value (first moment), measuring the central tendency of the distribution.
243.	B2DistributionLognormalStdev	Returns the Lognormal distribution's theoretical skew (third moment), measuring the direction of the distribution's tail. Positive (negative) skew means mean exceeds (is less than) median and the tail points to the right (left).
244.	B2DistributionNegativeBinomialKurtosis	Returns the Lognormal distribution's theoretical standard deviation (second moment), measuring the width and average dispersion of all points around the mean.
245.	B2DistributionNegativeBinomialMean	Returns the Negative Binomial distribution's theoretical excess kurtosis (fourth moment), measuring the peakedness of the distribution and its extreme tail events. An excess kurtosis of 0 implies a normal tail.
246.	B2DistributionNegativeBinomialSkew	Returns the Negative Binomial distribution's theoretical mean or expected value (first moment), measuring the central tendency of the distribution.
247.	B2DistributionNegativeBinomialStdev	Returns the Negative Binomial distribution's theoretical skew (third moment), measuring the direction of the distribution's tail. Positive (negative) skew means mean exceeds (is less than) median and the tail points to the right (left).
248.	B2DistributionNormalKurtosis	Returns the Negative Binomial distribution's theoretical standard deviation (second moment), measuring the width and average dispersion of all points around the mean.
249.	B2DistributionNormalMean	Returns the Normal distribution's theoretical excess kurtosis (fourth moment), measuring the peakedness of the distribution and its extreme tail events. An excess kurtosis of 0 implies a normal tail.
250.	B2DistributionNormalSkew	Returns the Normal distribution's theoretical mean or expected value (first moment), measuring the central tendency of the distribution.
251.	B2DistributionNormalStdev	Returns the Normal distribution's theoretical skew (third moment), measuring the direction of the distribution's tail. Positive (negative) skew means mean exceeds (is less than) median and the tail points to the right (left).
252.	B2DistributionParetoKurtosis	Returns the Normal distribution's theoretical standard deviation (second moment), measuring the width and average dispersion of all points around the mean.
253.	B2DistributionParetoMean	Returns the Pareto distribution's theoretical excess kurtosis (fourth moment), measuring the peakedness of the distribution and its extreme tail events. An excess kurtosis of 0 implies a normal tail.
254.	B2DistributionParetoSkew	Returns the Pareto distribution's theoretical mean or expected value (first moment), measuring the central tendency of the distribution.
255.	B2DistributionParetoStdev	Returns the Pareto distribution's theoretical skew (third moment), measuring the direction of the distribution's tail. Positive (negative) skew means mean exceeds (is less than) median and the tail points to the right (left).
256.	B2DistributionPoissonKurtosis	Returns the Pareto distribution's theoretical standard deviation (second moment), measuring the width and average dispersion of all points around the mean.
	B2DistributionPoissonMean	Returns the Poisson distribution's theoretical excess kurtosis (fourth moment), measuring the peakedness of the distribution and its extreme tail events. An excess kurtosis of 0 implies a normal tail.

- (fourth moment), measuring the peakedness of the distribution and its extreme tail events. An excess kurtosis of 0 implies a normal tail.
257. **B2DistributionPoissonMean**
Returns the Poisson distribution's theoretical mean or expected value (first moment), measuring the central tendency of the distribution.
258. **B2DistributionPoissonSkew**
Returns the Poisson distribution's theoretical skew (third moment), measuring the direction of the distribution's tail. Positive (negative) skew means mean exceeds (is less than) median and the tail points to the right (left).
259. **B2DistributionPoissonStdev**
Returns the Poisson distribution's theoretical standard deviation (second moment), measuring the width and average dispersion of all points around the mean.
260. **B2DistributionRayleighKurtosis**
Returns the Rayleigh distribution's theoretical excess kurtosis (fourth moment), measuring the peakedness of the distribution and its extreme tail events. An excess kurtosis of 0 implies a normal tail.
261. **B2DistributionRayleighMean**
Returns the Rayleigh distribution's theoretical mean or expected value (first moment), measuring the central tendency of the distribution.
262. **B2DistributionRayleighSkew**
Returns the Rayleigh distribution's theoretical skew (third moment), measuring the direction of the distribution's tail. Positive (negative) skew means mean exceeds (is less than) median and the tail points to the right (left).
263. **B2DistributionRayleighStdev**
Returns the Rayleigh distribution's theoretical standard deviation (second moment), measuring the width and average dispersion of all points around the mean.
264. **B2DistributionTKurtosis**
Returns the Student's T distribution's theoretical excess kurtosis (fourth moment), measuring the peakedness of the distribution and its extreme tail events. An excess kurtosis of 0 implies a normal tail.
265. **B2DistributionTMean**
Returns the Student's T distribution's theoretical mean or expected value (first moment), measuring the central tendency of the distribution.
266. **B2DistributionTSkew**
Returns the Student's T distribution's theoretical skew (third moment), measuring the direction of the distribution's tail. Positive (negative) skew means mean exceeds (is less than) median and the tail points to the right (left).
267. **B2DistributionTStdev**
Returns the Student's T distribution's theoretical standard deviation (second moment), measuring the width and average dispersion of all points around the mean.
268. **B2DistributionTriangularKurtosis**
Returns the Triangular distribution's theoretical excess kurtosis (fourth moment), measuring the peakedness of the distribution and its extreme tail events. An excess kurtosis of 0 implies a normal tail.
269. **B2DistributionTriangularMean**
Returns the Triangular distribution's theoretical mean or expected value (first moment), measuring the central tendency of the distribution.
270. **B2DistributionTriangularSkew**
Returns the Triangular distribution's theoretical skew (third moment), measuring the direction of the distribution's tail. Positive (negative) skew means mean exceeds (is less than) median and the tail points to the right (left).
271. **B2DistributionTriangularStdev**
Returns the Triangular distribution's theoretical standard deviation (second moment), measuring the width and average dispersion of all points around the mean.
272. **B2DistributionUniformKurtosis**
Returns the Uniform distribution's theoretical excess kurtosis (fourth moment), measuring the peakedness of the distribution and its extreme tail events. An excess kurtosis of 0 implies a normal tail.
273. **B2DistributionUniformMean**
Returns the Uniform distribution's theoretical mean or expected value (first moment), measuring the central tendency of the distribution.
274. **B2DistributionUniformSkew**
Returns the Uniform distribution's theoretical skew (third moment), measuring the direction of the distribution's tail. Positive (negative) skew means mean exceeds (is less than) median and the tail points to the right (left).
275. **B2DistributionUniformStdev**
Returns the Uniform distribution's theoretical standard deviation (second moment), measuring the width and average dispersion of all points around the mean.
276. **B2DistributionWeibullKurtosis**
Returns the Weibull distribution's theoretical excess kurtosis (fourth moment), measuring the peakedness of the distribution and its extreme tail events. An excess kurtosis of 0 implies a normal tail.
277. **B2DistributionWeibullMean**
Returns the Weibull distribution's theoretical mean or expected value (first moment), measuring the central tendency of the distribution.
278. **B2DistributionWeibullSkew**
Returns the Weibull distribution's theoretical skew (third moment), measuring the direction of the distribution's tail. Positive (negative) skew means mean exceeds (is less than) median and the tail points to the right (left).
279. **B2DistributionWeibullStdev**
Returns the Weibull distribution's theoretical standard deviation (second moment), measuring the width and average dispersion of all points around the mean.
280. **B2DistributionCDFBernoulli**
Computes the Bernoulli distribution's theoretical Cumulative Distribution Function (CDF), that is, the cumulative probability of the distribution less than or equal to X.
281. **B2DistributionCDFBeta**
Computes the Beta distribution's theoretical Cumulative Distribution Function (CDF), that is, the cumulative probability of the distribution at all points less than or equal to X.
282. **B2DistributionCDFBinomial**
Computes the Binomial distribution's theoretical Cumulative Distribution Function (CDF), that is, the cumulative probability of the distribution at all points less than or equal to X.
283. **B2DistributionCDFChiSquare**
Computes the Chi-Square distribution's theoretical Cumulative Distribution Function (CDF), that is, the cumulative probability of the distribution at all points less than or equal to X.
284. **B2DistributionCDFDiscreteUniform**
Computes the Discrete Uniform distribution's theoretical Cumulative Distribution Function (CDF), that is, the cumulative probability of the distribution at all points less than or equal to X.
285. **B2DistributionCDFExponential**
Computes the Exponential distribution's theoretical Cumulative Distribution Function (CDF), that is, the cumulative probability of the distribution at all points less than or equal to X.
286. **B2DistributionCDFFDist**

- Computes the F distribution's theoretical Cumulative Distribution Function (CDF), that is, the cumulative probability of the distribution at all points less than or equal to X.
287. **B2DistributionCDFGamma**
Computes the Gamma distribution's theoretical Cumulative Distribution Function (CDF), that is, the cumulative probability of the distribution at all points less than or equal to X.
288. **B2DistributionCDFGeometric**
Computes the Geometric distribution's theoretical Cumulative Distribution Function (CDF), that is, the cumulative probability of the distribution at all points less than or equal to X.
289. **B2DistributionCDFGumbelMax**
Computes the Gumbel Max distribution's theoretical Cumulative Distribution Function (CDF), that is, the cumulative probability of the distribution at all points less than or equal to X.
290. **B2DistributionCDFGumbelMin**
Computes the Gumbel Min distribution's theoretical Cumulative Distribution Function (CDF), that is, the cumulative probability of the distribution at all points less than or equal to X.
291. **B2DistributionCDFLogistic**
Computes the Logistic distribution's theoretical Cumulative Distribution Function (CDF), that is, the cumulative probability of the distribution at all points less than or equal to X.
292. **B2DistributionCDFLognormal**
Computes the Lognormal distribution's theoretical Cumulative Distribution Function (CDF), that is, the cumulative probability of the distribution at all points less than or equal to X.
293. **B2DistributionCDFNormal**
Computes the Normal distribution's theoretical Cumulative Distribution Function (CDF), that is, the cumulative probability of the distribution at all points less than or equal to X.
294. **B2DistributionCDFPareto**
Computes the Pareto distribution's theoretical Cumulative Distribution Function (CDF), that is, the cumulative probability of the distribution at all points less than or equal to X.
295. **B2DistributionCDFPoisson**
Computes the Poisson distribution's theoretical Cumulative Distribution Function (CDF), that is, the cumulative probability of the distribution at all points less than or equal to X.
296. **B2DistributionCDFRayleigh**
Computes the Rayleigh distribution's theoretical Cumulative Distribution Function (CDF), that is, the cumulative probability of the distribution at all points less than or equal to X.
297. **B2DistributionCDFStandardNormal**
Computes the Standard Normal distribution's theoretical Cumulative Distribution Function (CDF), that is, the cumulative probability of the distribution at all points less than or equal to X.
298. **B2DistributionCDFTDist**
Computes the Student's T distribution's theoretical Cumulative Distribution Function (CDF), that is, the cumulative probability of the distribution at all points less than or equal to X.
299. **B2DistributionCDFTriangular**
Computes the Triangular distribution's theoretical Cumulative Distribution Function (CDF), that is, the cumulative probability of the distribution at all points less than or equal to X.
300. **B2DistributionCDFUniform**
Computes the Uniform distribution's theoretical Cumulative Distribution Function (CDF), that is, the cumulative probability of the distribution at all points less than or equal to X.
301. **B2DistributionCDFWeibull**
Computes the Weibull distribution's theoretical Cumulative Distribution Function (CDF), that is, the cumulative probability of the distribution at all points less than or equal to X.
302. **B2DistributionICDFBernoulli**
Computes the Bernoulli distribution's theoretical Inverse Cumulative Distribution Function (ICDF), that is, given the cumulative probability between 0 and 1, and the distribution's parameters, the function returns the relevant X value.
303. **B2DistributionICDFBeta**
Computes the Beta distribution's theoretical Inverse Cumulative Distribution Function (ICDF), that is, given the cumulative probability between 0 and 1, and the distribution's parameters, the function returns the relevant X value.
304. **B2DistributionICDFBinomial**
Computes the Binomial distribution's theoretical Inverse Cumulative Distribution Function (ICDF), that is, given the cumulative probability between 0 and 1, and the distribution's parameters, the function returns the relevant X value.
305. **B2DistributionICDFChiSquare**
Computes the Chi-Square distribution's theoretical Inverse Cumulative Distribution Function (ICDF), that is, given the cumulative probability between 0 and 1, and the distribution's parameters, the function returns the relevant X value.
306. **B2DistributionICDFDiscreteUniform**
Computes the Discrete Uniform distribution's theoretical Inverse Cumulative Distribution Function (ICDF), that is, given the cumulative probability between 0 and 1, and the distribution's parameters, the function returns the relevant X value.
307. **B2DistributionICDFExponential**
Computes the Exponential distribution's theoretical Inverse Cumulative Distribution Function (ICDF), that is, given the cumulative probability between 0 and 1, and the distribution's parameters, the function returns the relevant X value.
308. **B2DistributionICDFFDist**
Computes the F distribution's theoretical Inverse Cumulative Distribution Function (ICDF), that is, given the cumulative probability between 0 and 1, and the distribution's parameters, the function returns the relevant X value.
309. **B2DistributionICDFGamma**
Computes the Gamma distribution's theoretical Inverse Cumulative Distribution Function (ICDF), that is, given the cumulative probability between 0 and 1, and the distribution's parameters, the function returns the relevant X value.
310. **B2DistributionICDFGeometric**
Computes the Geometric distribution's theoretical Inverse Cumulative Distribution Function (ICDF), that is, given the cumulative probability between 0 and 1, and the distribution's parameters, the function returns the relevant X value.
311. **B2DistributionICDFGumbelMax**
Computes the Gumbel Max distribution's theoretical Inverse Cumulative Distribution Function (ICDF), that is, given the cumulative probability between 0 and 1, and the

- distribution's parameters, the function returns the relevant X value.
312. **B2DistributionICDFGumbelMin**
Computes the Gumbel Min distribution's theoretical Inverse Cumulative Distribution Function (ICDF), that is, given the cumulative probability between 0 and 1, and the distribution's parameters, the function returns the relevant X value.
313. **B2DistributionICDFLogistic**
Computes the Logistic distribution's theoretical Inverse Cumulative Distribution Function (ICDF), that is, given the cumulative probability between 0 and 1, and the distribution's parameters, the function returns the relevant X value.
314. **B2DistributionICDFLognormal**
Computes the Lognormal distribution's theoretical Inverse Cumulative Distribution Function (ICDF), that is, given the cumulative probability between 0 and 1, and the distribution's parameters, the function returns the relevant X value.
315. **B2DistributionICDFNormal**
Computes the Normal distribution's theoretical Inverse Cumulative Distribution Function (ICDF), that is, given the cumulative probability between 0 and 1, and the distribution's parameters, the function returns the relevant X value.
316. **B2DistributionICDFPareto**
Computes the Pareto distribution's theoretical Inverse Cumulative Distribution Function (ICDF), that is, given the cumulative probability between 0 and 1, and the distribution's parameters, the function returns the relevant X value.
317. **B2DistributionICDFPoisson**
Computes the Poisson distribution's theoretical Inverse Cumulative Distribution Function (ICDF), that is, given the cumulative probability between 0 and 1, and the distribution's parameters, the function returns the relevant X value.
318. **B2DistributionICDFRayleigh**
Computes the Rayleigh distribution's theoretical Inverse Cumulative Distribution Function (ICDF), that is, given the cumulative probability between 0 and 1, and the distribution's parameters, the function returns the relevant X value.
319. **B2DistributionICDFStandardNormal**
Computes the Standard Normal distribution's theoretical Inverse Cumulative Distribution Function (ICDF), that is, given the cumulative probability between 0 and 1, and the distribution's parameters, the function returns the relevant X value.
320. **B2DistributionICDFTDist**
Computes the Student's T distribution's theoretical Inverse Cumulative Distribution Function (ICDF), that is, given the cumulative probability between 0 and 1, and the distribution's parameters, the function returns the relevant X value.
321. **B2DistributionICDFTriangular**
Computes the Triangular distribution's theoretical Inverse Cumulative Distribution Function (ICDF), that is, given the cumulative probability between 0 and 1, and the distribution's parameters, the function returns the relevant X value.
322. **B2DistributionICDFUniform**
Computes the Uniform distribution's theoretical Inverse Cumulative Distribution Function (ICDF), that is, given the cumulative probability between 0 and 1, and the distribution's parameters, the function returns the relevant X value.
323. **B2DistributionICDFWeibull**
Computes the Weibull distribution's theoretical Inverse Cumulative Distribution Function (ICDF), that is, given the cumulative probability between 0 and 1, and the distribution's parameters, the function returns the relevant X value.
324. **B2DistributionPDFBernoulli**
Computes the Bernoulli distribution's theoretical Inverse Cumulative Distribution Function (ICDF), that is, given the cumulative probability between 0 and 1, and the distribution's parameters, the function returns the relevant X value.
325. **B2DistributionPDFBeta**
Computes the Beta distribution's theoretical Probability Density Function (PDF). The PDF of a discrete distribution returns the exact probability mass function or probability of occurrence but the PDF of continuous distributions are only theoretical values and not exact probabilities.
326. **B2DistributionPDFBinomial**
Computes the Binomial distribution's theoretical Probability Density Function (PDF). The PDF of a discrete distribution returns the exact probability mass function or probability of occurrence but the PDF of continuous distributions are only theoretical values and not exact probabilities.
327. **B2DistributionPDFChiSquare**
Computes the Chi-Square distribution's theoretical Probability Density Function (PDF). The PDF of a discrete distribution returns the exact probability mass function or probability of occurrence but the PDF of continuous distributions are only theoretical values and not exact probabilities.
328. **B2DistributionPDFDiscreteUniform**
Computes the Discrete Uniform distribution's theoretical Probability Density Function (PDF). The PDF of a discrete distribution returns the exact probability mass function or probability of occurrence but the PDF of continuous distributions are only theoretical values and not exact probabilities.
329. **B2DistributionPDFExponential**
Computes the Exponential distribution's theoretical Probability Density Function (PDF). The PDF of a discrete distribution returns the exact probability mass function or probability of occurrence but the PDF of continuous distributions are only theoretical values and not exact probabilities.
330. **B2DistributionPDFFDist**
Computes the F distribution's theoretical Probability Density Function (PDF). The PDF of a discrete distribution returns the exact probability mass function or probability of occurrence but the PDF of continuous distributions are only theoretical values and not exact probabilities.
331. **B2DistributionPDFGamma**
Computes the Gamma distribution's theoretical Probability Density Function (PDF). The PDF of a discrete distribution returns the exact probability mass function or probability of occurrence but the PDF of continuous distributions are only theoretical values and not exact probabilities.
332. **B2DistributionPDFGeometric**
Computes the Geometric distribution's theoretical Probability Density Function (PDF). The PDF of a discrete distribution returns the exact probability mass function or probability of occurrence but the PDF of continuous distributions are only theoretical values and not exact probabilities.
333. **B2DistributionPDFGumbelMax**
Computes the Gumbel Max distribution's theoretical Probability Density Function (PDF). The PDF of a discrete distribution returns the exact probability mass function or

- probability of occurrence but the PDF of continuous distributions are only theoretical values and not exact probabilities.
334. **B2DistributionPDFGumbelMin**
Computes the Gumbel Min distribution's theoretical Probability Density Function (PDF). The PDF of a discrete distribution returns the exact probability mass function or probability of occurrence but the PDF of continuous distributions are only theoretical values and not exact probabilities.
335. **B2DistributionPDFLogistic**
Computes the Logistic distribution's theoretical Probability Density Function (PDF). The PDF of a discrete distribution returns the exact probability mass function or probability of occurrence but the PDF of continuous distributions are only theoretical values and not exact probabilities.
336. **B2DistributionPDFLognormal**
Computes the Lognormal distribution's theoretical Probability Density Function (PDF). The PDF of a discrete distribution returns the exact probability mass function or probability of occurrence but the PDF of continuous distributions are only theoretical and not exact probabilities.
337. **B2DistributionPDFNormal**
Computes the Normal distribution's theoretical Probability Density Function (PDF). The PDF of a discrete distribution returns the exact probability mass function or probability of occurrence but the PDF of continuous distributions are only theoretical values and not exact probabilities.
338. **B2DistributionPDFPareto**
Computes the Pareto distribution's theoretical Probability Density Function (PDF). The PDF of a discrete distribution returns the exact probability mass function or probability of occurrence but the PDF of continuous distributions are only theoretical values and not exact probabilities.
339. **B2DistributionPDFPoisson**
Computes the Poisson distribution's theoretical Probability Density Function (PDF). The PDF of a discrete distribution returns the exact probability mass function or probability of occurrence but the PDF of continuous distributions are only theoretical values and not exact probabilities.
340. **B2DistributionPDFRayleigh**
Computes the Rayleigh distribution's theoretical Probability Density Function (PDF). The PDF of a discrete distribution returns the exact probability mass function or probability of occurrence but the PDF of continuous distributions are only theoretical values and not exact probabilities.
341. **B2DistributionPDFStandardNormal**
Computes the Standard Normal distribution's theoretical Probability Density Function (PDF). The PDF of a discrete distribution returns the exact probability mass function or probability of occurrence but the PDF of continuous distributions are only theoretical values and not exact probabilities.
342. **B2DistributionPDFTDist**
Computes the Student's T distribution's theoretical Probability Density Function (PDF). The PDF of a discrete distribution returns the exact probability mass function or probability of occurrence but the PDF of continuous distributions are only theoretical values and not exact probabilities.
343. **B2DistributionPDFTriangular**
Computes the Triangular distribution's theoretical Probability Density Function (PDF). The PDF of a discrete distribution returns the exact probability mass function or probability of occurrence but the PDF of continuous distributions are only theoretical values and not exact probabilities.
344. **B2DistributionPDFUniform**
Computes the Uniform distribution's theoretical Probability Density Function (PDF). The PDF of a discrete distribution returns the exact probability mass function or probability of occurrence but the PDF of continuous distributions are only theoretical values and not exact probabilities.
345. **B2DistributionPDFWeibull**
Computes the Weibull distribution's theoretical Probability Density Function (PDF). The PDF of a discrete distribution returns the exact probability mass function or probability of occurrence but the PDF of continuous distributions are only theoretical values and not exact probabilities.
346. **B2EquityLinkedFXCallOptionDomesticValue**
Call options whose underlying asset is in a foreign equity market, and the fluctuations of the foreign exchange risk is hedged by having a strike price on the foreign exchange rate. Resulting valuation is in the domestic currency.
347. **B2EquityLinkedXPPutOptionDomesticValue**
Put options whose underlying asset is in a foreign equity market, and the fluctuations of the foreign exchange risk is hedged by having a strike price on the foreign exchange rate. Resulting valuation is in the domestic currency.
348. **B2EWMAVolatilityForecastGivenPastPrices**
Computes the annualized volatility forecast of the next period given a series of historical prices and the corresponding weights placed on the previous volatility estimate.
349. **B2EWMAVolatilityForecastGivenPastVolatility**
Computes the annualized volatility forecast of the next period given the previous period's volatility and changes in stock returns in the previous period.
350. **B2ExtremeSpreadCallOption**
Maturities are divided into two segments, and the call option pays the difference between the max assets from segment two and max of segment one.
351. **B2ExtremeSpreadPutOption**
Maturities are divided into two segments, and the put option pays the difference between the min of segment two's asset value and the min of segment one's asset value.
352. **B2ExtremeSpreadReverseCallOption**
Maturities are divided into two segments, and a reverse call pays the min from segment one less the min of segment two.
353. **B2ExtremeSpreadReversePutOption**
Maturities are divided into two segments, and a reverse put pays the max of segment one less the max of the segment two.
354. **B2FiniteDifferenceAmericanCall**
Computes the American call option using finite differencing methods, as an alternative to simulation, closed-form approximation models, and lattices.
355. **B2FiniteDifferenceAmericanPut**
Computes the American put option using finite differencing methods, as an alternative to simulation, closed-form approximation models, and lattices.
356. **B2FiniteDifferenceEuropeanCall**
Computes the European call option using finite differencing methods, as an alternative to simulation, closed-form approximation models, and lattices.
357. **B2FiniteDifferenceEuropeanPut**
Computes the European put option using finite differencing methods, as an alternative to simulation, closed-form approximation models, and lattices.
358. **B2FixedStrikeLookbackCall**
Strike price is fixed, while at expiration, the payoff is the difference between the maximum asset price less the strike price, during the lifetime of the option.
359. **B2FixedStrikeLookbackPut**
Strike price is fixed, while at expiration, the payoff is the maximum difference between the lowest observed asset price less the strike price, during the lifetime of the option.

360. **B2FixedStrikePartialLookbackCall**
Strike price is fixed, while at expiration, the payoff is the difference between the maximum asset price less the strike, during the starting period of the lookback to the maturity of the option.
361. **B2FixedStrikePartialLookbackPut**
Strike price is fixed, while at expiration, the payoff is the maximum difference between the lowest observed asset price less the strike, during the starting period of the lookback to the maturity of the option.
362. **B2FloatingStrikeLookbackCallOnMin**
Strike price is floating, while at expiration, the payoff on the call option is being able to purchase the underlying asset at the minimum observed price during the life of the option.
363. **B2FloatingStrikeLookbackPutOnMax**
Strike price is floating, while at expiration, the payoff on the put option is being able to sell the underlying asset at the maximum observed asset price during the life of the option.
364. **B2FloatingStrikePartialLookbackCallOnMin**
Strike price is floating, while at expiration, the payoff on the call option is being able to purchase the underlying at the minimum observed asset price from inception to the end of the lookback time.
365. **B2FloatingStrikePartialLookbackPutOnMax**
Strike price is floating, while at expiration, the payoff on the put option is being able to sell the underlying at the maximum observed asset price from inception to the end of the lookback time.
366. **B2ForecastBrownianMotionSimulatedSeries**
Computes the entire time-series of Brownian motion stochastic process forecast values.
367. **B2ForecastDistributionValue**
Computes the forecast price of an asset in the future, assuming the asset follows a Brownian motion random walk and returns the forecast price given the cumulative probability level.
368. **B2ForecastDistributionValuePercentile**
Computes the cumulative probability or percentile of an asset in the future, assuming the asset follows a Brownian motion random walk and returns the forecast cumulative percentile given the future price.
369. **B2ForecastDistributionReturns**
Computes the forecast return of an asset in the future, assuming the asset follows a Brownian motion random walk and returns the forecast percent return given the cumulative probability level.
370. **B2ForecastDistributionReturnsPercentile**
Computes the cumulative probability or percentile of an asset's returns in the future, assuming the asset follows a Brownian motion random walk and returns the forecast cumulative percentile given the return.
371. **B2ForecastJumpDiffusionSimulatedSeries**
Computes the entire time-series of a jump-diffusion stochastic process forecast values.
372. **B2ForecastMeanReversionSimulatedSeries**
Computes the entire time-series of a mean-reverting stochastic process forecast values.
373. **B2ForecastIncrementalFinancialNeeds**
Computes the incremental funds required to cover the projected organic sales growth of the company based on the projected year's financials.
374. **B2ForecastIncrementalPercentSalesGrowthFinancedExternal**
Computes the incremental funds as a percent of sales growth that is required from external funding to cover the projected organic sales growth of the company.
375. **B2ForeignEquityDomesticCurrencyCall**
Computes the value of a foreign-based equity call option struck in a domestic currency and accounting for the exchange rate volatility.
376. **B2ForeignEquityDomesticCurrencyPut**
Computes the value of a foreign-based equity put option struck in a domestic currency and accounting for the exchange rate volatility.
377. **B2ForeignEquityFixedFXRateDomesticValueQuantoCall**
Quanto call options are denominated in another currency than the underlying asset, with expanding or contracting protection coverage of the foreign exchange rates.
378. **B2ForeignEquityFixedFXRateDomesticValueQuantoPut**
Quanto put options are denominated in another currency than the underlying asset, with an expanding or contracting protection coverage of the foreign exchange rates.
379. **B2ForwardRate**
Computes the Forward Interest Rate given two Spot Rates
380. **B2ForwardStartCallOption**
Starts proportionally in or out of the money in the future. Alpha<1: call starts (1-A)% in the money, put starts (1-A)% out of the money. Alpha>1: call (A-1) % out of the money, puts (A-1)% in the money.
381. **B2ForwardStartPutOption**
Starts proportionally in or out of the money in the future. Alpha<1: call starts (1-A)% in the money, put starts (1-A)% out of the money. Alpha>1: call (A-1) % out of the money, puts (A-1)% in the money.
382. **B2FuturesForwardsCallOption**
Similar to a regular option but the underlying asset is a futures of forward contract. A call option is the option to buy a futures contract, with the specified futures strike price at which the futures is traded if the option is exercised.
383. **B2FuturesForwardsPutOption**
Similar to a regular option but the underlying asset is a futures of forward contract. A put option is the option to sell a futures contract, with the specified futures strike price at which the futures is traded if the option is exercised.
384. **B2FuturesSpreadCall**
The payoff of a spread option is the difference between the two futures' values at expiration. The spread is Futures 1 - Futures 2, and the call payoff is Spread - Strike value.
385. **B2FuturesSpreadPut**
The payoff of a spread option is the difference between the two futures' values at expiration. The spread is Futures 1 - Futures 2, and the put payoff is Strike - Spread.
386. **B2GARCH**
Computes the forward-looking volatility forecast using the generalized autoregressive conditional heteroskedasticity (p, q) model where future volatilities are forecast based on historical price levels and information.
387. **B2GapCallOption**
The call option is knocked in if the asset exceeds the reference Strike 1, and the option payoff is the asset price less Strike 2 for the underlying.
388. **B2GapPutOption**
The put option is knocked in only if the underlying asset is less than the reference Strike 1, providing a payoff of Strike Price 2 less the underlying asset value.
389. **B2GeneralizedBlackScholesCall**
Returns the Black-Scholes Model with a continuous dividend yield call option.
390. **B2GeneralizedBlackScholesCallCashDividends**
Modification of the Generalized Black-Scholes model to solve European call options assuming a series of dividend cash flows that may be even or uneven. A series of dividend payments and time are required.
391. **B2GeneralizedBlackScholesPut**
Returns the Black-Scholes Model with a continuous dividend yield put option.
392. **B2GeneralizedBlackScholesPutCashDividends**

	Modification of the Generalized Black-Scholes model to solve European put options assuming a series of dividend cash flows that may be even or uneven. A series of dividend payments and time are required.	Gamma distribution, rather than a normal distribution, and is important for deep out-of-the-money options.
393.	B2GraduatedBarrierDownandInCall Barriers are graduated ranges between lower and upper values. The option is knocked in the money proportionally depending on how low the asset value is in the range.	411. B2IRRContinuous Returns the continuously discounted Internal Rate of Return for a cash flow series with its respective cash flow times in years.
394.	B2GraduatedBarrierDownandOutCall Barriers are graduated ranges between lower and upper values. The option is knocked out of the money proportionally depending on how low the asset value is in the range.	412. B2IRRDiscrete Returns the discretely discounted Internal Rate of Return for a cash flow series with its respective cash flow times in years.
395.	B2GraduatedBarrierUpandInPut Barriers are graduated ranges between lower and upper values. The option is knocked in the money proportionally depending on how high the asset value is in the range.	413. B2LinearInterpolation Interpolates and fills in the missing values of a time series.
396.	B2GraduatedBarrierUpandOutPut Barriers are graduated ranges between lower and upper values. The option is knocked out of the money proportionally depending on how high the asset value is in the range.	414. B2MarketPriceRisk Computes the market price of risk used in a variety of options analysis, using market return, risk-free return, volatility of the market and correlation between the market and the asset.
397.	B2ImpliedVolatilityBestCase Computes the implied volatility given an expected value of an asset, and an alternative best case scenario value and its corresponding percentile (must be above 50%).	415. B2MathIncompleteGammaQ Returns the result from an incomplete Gamma Q function.
398.	B2ImpliedVolatilityCall Computes the implied volatility in a European call option given all the inputs parameters and option value.	416. B2MathIncompleteGammaP Returns the result from an incomplete Gamma P function.
399.	B2ImpliedVolatilityPut Computes the implied volatility in a European put option given all the inputs parameters and option value.	417. B2MathIncompleteBeta Returns the result from an incomplete Beta function.
400.	B2ImpliedVolatilityWorstCase Computes the implied volatility given an expected value of an asset, and an alternative worst case scenario value and its corresponding percentile (must be below 50%).	418. B2MathGammaLog Returns the result from a log gamma function.
401.	B2InterestAnnualtoPeriodic Computes the periodic compounding rate based on the annualized compounding interest rate per year.	419. B2MatrixMultiplyAxB Multiplies two compatible matrices, such as MxN with NxM to create an MxM matrix. Copy and paste function and use Ctrl+Shift Enter to obtain the matrix.
402.	B2InterestCaplet Computes the interest rate caplet (sum all the caplets into the total value of the interest rate cap) and acts like an interest rate call option.	420. B2MatrixMultiplyAxTransposeB Multiplies the first matrix with the transpose of the second matrix (multiplies MxN with MxN matrix by transposing the second matrix to NxM, generating an MxM matrix). Copy and paste function and use Ctrl+Shift Enter to obtain the matrix.
403.	B2InterestContinuousToDiscrete Returns the corresponding discrete compounding interest rate given the continuous compounding rate.	421. B2MatrixMultiplyTransposeAxB Multiplies the transpose of the first matrix with the second matrix (multiplies MxN with MxN matrix by transposing the first matrix to NxM, generating an NxN matrix). Copy and paste function and use Ctrl+Shift Enter to obtain the matrix.
404.	B2InterestContinuousToPeriodic Computes the periodic compounding interest rate based on a continuous compounding rate.	422. B2MatrixTranspose Transposes a matrix, from MxN to NxM. Copy and paste function and use Ctrl+Shift Enter to obtain the matrix.
405.	B2InterestDiscreteToContinuous Returns the corresponding continuous compounding interest rate given the discrete compounding rate.	423. B2MertonJumpDiffusionCall Call value of an underlying whose asset returns are assumed to follow a Poisson Jump Diffusion process, i.e., prices jump several times a year, and cumulatively, these jumps explain a percentage of the total asset volatility.
406.	B2InterestFloorlet Computes the interest rate floorlet (sum all the floorlets into the total value of the interest rate floor) and acts like an interest rate put option.	424. B2MertonJumpDiffusionPut Put value of an underlying whose asset returns are assumed to follow a Poisson Jump Diffusion process, i.e., prices jump several times a year, and cumulatively, these jumps explain a percentage of the total asset volatility.
407.	B2InterestPeriodictoAnnual Computes the annualized compounding interest rate per year based on a periodic compounding rate.	425. B2NormalTransform Converts values into a normalized distribution.
408.	B2InterestPeriodictoContinuous Computes the continuous compounding rate based on the periodic compounding interest rate.	426. B2NPVContinuous Returns the Net Present Value of a cash flow series given the time and discount rate, using Continuous discounting.
409.	B2InverseGammaCallOption Computes the European Call option assuming an inverse Gamma distribution, rather than a normal distribution, and is important for deep out-of-the-money options.	427. B2NPVDiscrete Returns the Net Present Value of a cash flow series given the time and discount rate, using discrete discounting.
410.	B2InverseGammaPutOption Computes the European Put option assuming an inverse	428. B2OptionStrategyLongBearCreditSpread Returns the matrix [stock price, buy put, sell put, profit] of a long bearish credit spread (buying a higher strike put with a high price and selling a lower strike put with a low price).
		429. B2OptionStrategyLongBullCreditSpread Returns the matrix [stock price, buy put, sell put, profit] of a bullish credit spread (buying a low strike put at low price and selling a high strike put at high price).
		430. B2OptionStrategyLongBearDebitSpread Returns the matrix [stock price, buy call, sell call, profit] of a

- long bearish debit spread (buying a high strike call with a low price and selling a lower strike call with a high price).
431. **B2OptionStrategyLongBullDebitSpread**
Returns the matrix [stock price, buy call, sell call, profit] of a bullish debit spread (buying a low strike call at high price and selling a further out-of-the-money high strike call at low price).
432. **B2OptionStrategyLongCoveredCall**
Returns the matrix [stock price, buy stock, sell call, profit] of a long covered call position (buying the stock and selling a call of the same asset).
433. **B2OptionStrategyLongProtectivePut**
Returns the matrix [stock price, buy stock, buy put, profit] of a long protective put position (buying the stock and buying a put of the same asset).
434. **B2OptionStrategyLongStraddle**
Returns the matrix [stock price, buy call, buy put, profit] of a long straddle position (buy an equal number of puts and calls with identical strike price and expiration) to profit from high volatility.
435. **B2OptionStrategyLongStrangle**
Returns the matrix [stock price, buy call, buy put, profit] of a long strangle (buy high strike call at low price and buy low strike put at low price (close expirations), profits from high volatility).
436. **B2OptionStrategyWriteCoveredCall**
Returns the matrix [stock price, sell stock, buy call, profit] of writing a covered call (selling the stock and buying a call of the same asset).
437. **B2OptionStrategyWriteProtectivePut**
Returns the matrix [stock price, sell stock, sell put, profit] of a long protective put position (buying the stock and buying a put of the same asset).
438. **B2OptionStrategyWriteStraddle**
Returns the matrix [stock price, sell call, sell put, profit] of writing a straddle position (sell an equal number of puts and calls with identical strike price and expiration) to profit from low volatility.
439. **B2OptionStrategyWriteStrangle**
Returns the matrix [stock price, sell call, sell put, profit] of writing a strangle (sell high strike call at low price and sell low strike put at low price (close expirations), profits from low volatility).
440. **B2Payback**
Computes the payback in years given some initial investment and subsequent cash flows.
441. **B2PerpetualCallOption**
Computes the American perpetual call option. Note that it returns an error if dividend is 0% (this is because the American option reverts to European and a perpetual European has no value).
442. **B2PerpetualPutOption**
Computes the American perpetual put option. Note that it returns an error if dividend is 0% (this is because the American option reverts to European and a perpetual European has no value).
443. **B2PortfolioReturns**
Computes the portfolio weighted average expected returns given individual asset returns and allocations.
444. **B2PortfolioRisk**
Computes the portfolio risk given individual asset allocations and variance-covariance matrix.
445. **B2PortfolioVariance**
Computes the portfolio variance given individual asset allocations and variance-covariance matrix. Take the square root of the result to obtain the portfolio risk.
446. **B2ProbabilityDefaultAdjustedBondYield**
Computes the required risk-adjusted yield (premium spread plus risk-free) to charge given the cumulative probability of default.
447. **B2ProbabilityDefaultAverageDefaults**
Credit Risk Plus' average number of credit defaults per period using total portfolio credit exposures, average cum probability of default, and percentile Value at Risk for the portfolio.
448. **B2ProbabilityDefaultCorrelation**
Computes the correlations of default probabilities given the probabilities of default of each asset and the correlation between their equity prices. The result is typically much smaller than the equity correlation.
449. **B2ProbabilityDefaultCumulativeBondYieldApproach**
Computes the cumulative probability of default from Year 0 to Maturity using a comparable zero bond yield versus a zero risk-free yield and accounting for a recovery rate.
450. **B2ProbabilityDefaultCumulativeSpreadApproach**
Computes the cumulative probability of default from Year 0 to Maturity using a comparable risky debt's spread (premium)versus the risk-free rate and accounting for a recovery rate.
451. **B2ProbabilityDefaultHazardRate**
Computes the hazard rate for a specific year (in survival analysis) using a comparable zero bond yield versus a zero risk-free yield and accounting for a recovery rate.
452. **B2ProbabilityDefaultMertonDefaultDistance**
Distance to Default (does not require market returns and correlations but requires the internal growth rates).
453. **B2ProbabilityDefaultMertonI**
Probability of Default (without regard to Equity Value or Equity Volatility, but requires Asset, Debt, and market values).
454. **B2ProbabilityDefaultMertonII**
Probability of Default (does not require market returns and correlations but requires the internal growth rates).
455. **B2ProbabilityDefaultMertonImputedAssetValue**
Returns the imputed market value of asset given external equity value, equity volatility, and other option inputs. Used in the Merton probability of default model.
456. **B2ProbabilityDefaultMertonImputedAssetVolatility**
Returns the imputed volatility of asset given external equity value, equity volatility, and other option inputs. Used in the Merton probability of default model.
457. **B2ProbabilityDefaultMertonMVDebt**
Computes the market value of debt (for risky debt) in the Merton-based simultaneous options model.
458. **B2ProbabilityDefaultMertonRecoveryRate**
Computes the rate of recovery in percent, for risky debt in the Merton-based simultaneous options model.
459. **B2ProbabilityDefaultPercentileDefaults**
Credit Risk Plus method to compute the percentile given some estimated average number of defaults per period.
460. **B2PropertyDepreciation**
Value of the periodic depreciation allowed on a commercial real estate project given the percent of price going to improvement and the allowed recovery period.
461. **B2PropertyEquityRequired**
Value of the required equity down payment on a commercial real estate project given the valuation of the project.
462. **B2PropertyLoanAmount**
Value of the required mortgage amount on a commercial real estate project given the value of the project and the loan required (loan to value ratio or the percentage of the value a loan is required).
463. **B2PropertyValuation**
Value of a commercial real estate property assuming Gross Rent, Vacancy, Operating Expenses, and the Cap Rate at Purchase Date (Net Operating Income/Sale Price).

464. **B2PutCallParityCaltoPut**
Computes the European put option value given the value of a corresponding European call option with identical input assumptions.
465. **B2PutCallParityCaltoPutCurrencyOptions**
Computes the European currency put option value given the value of a corresponding European currency call option on futures and forwards with identical input assumptions.
466. **B2PutCallParityCaltoPutFutures**
Computes the European put option on futures and forwards value given the value of a corresponding European call option on futures and forwards with identical input assumptions.
467. **B2PutCallParityPuttoCall**
Computes the European call option value given the value of a corresponding European put option with identical input assumptions.
468. **B2PutCallParityPuttoCallCurrencyOptions**
Computes the European currency call option value given the value of a corresponding European currency put option on futures and forwards with identical input assumptions.
469. **B2PutCallParityPuttoCallFutures**
Computes the European call option on futures and forwards value given the value of a corresponding European put option on futures and forwards with identical input assumptions.
470. **B2PutDelta**
Returns the option valuation sensitivity Delta (a put option value's sensitivity to changes in the asset value).
471. **B2PutGamma**
Returns the option valuation sensitivity Gamma (a put option value's sensitivity to changes in the delta value).
472. **B2PutOptionOnTheMax**
The maximum values at expiration of both assets are used in option exercise, where the call option payoff at expiration is the strike price against the maximum price between Asset 1 and Asset 2.
473. **B2PutOptionOnTheMin**
The minimum values at expiration of both assets are used in option exercise, where the call option payoff at expiration is the strike price against the minimum price between Asset 1 and Asset 2.
474. **B2PutRho**
Returns the option valuation sensitivity Rho (a put option value's sensitivity to changes in the interest rate).
475. **B2PutTheta**
Returns the option valuation sensitivity Theta (a put option value's sensitivity to changes in the maturity).
476. **B2PutVega**
Returns the option valuation sensitivity Vega (a put option value's sensitivity to changes in the volatility).
477. **B2QueuingMCAveCustomersinSystem**
Average number of customers in the system using a multiple channel queuing model assuming a Poisson arrival rate with Exponential distribution of service times.
478. **B2QueuingMCAveCustomersWaiting**
Average number of customers in the waiting line using a multiple channel queuing model assuming a Poisson arrival rate with Exponential distribution of service times.
479. **B2QueuingMCAveTimeinSystem**
Average time a customer spends in the system using a multiple channel queuing model assuming a Poisson arrival rate with Exponential distribution of service times.
480. **B2QueuingMCAveTimeWaiting**
Average time a customer spends in the waiting line using a multiple channel queuing model assuming a Poisson arrival rate with Exponential distribution of service times.
481. **B2QueuingMCProbHaveToWait**
Probability an arriving customer has to wait using a multiple channel queuing model assuming a Poisson arrival rate with Exponential distribution of service times.
482. **B2QueuingMCProbNoCustomer**
Probability that no customers are in the system using a multiple channel queuing model assuming a Poisson arrival rate with Exponential distribution of service times.
483. **B2QueuingMGKAvCustomersinSystem**
Average number of customers in the system using a multiple channel queuing model assuming a Poisson arrival rate with unknown distribution of service times.
484. **B2QueuingMGKCostPerPeriod**
Total cost per time period using a multiple channel queuing model assuming a Poisson arrival rate with unknown distribution of service times.
485. **B2QueuingMGKProbBusy**
Probability a channel will be busy using a multiple channel queuing model assuming a Poisson arrival rate with unknown distribution of service times.
486. **B2QueuingSCAAveCustomersinSystem**
Average number of customers in the system using an MG1 single channel arbitrary queuing model assuming a Poisson arrival rate with unknown distribution of service times.
487. **B2QueuingSCAAveCustomersWaiting**
Average number of customers in the waiting line using an MG1 single channel arbitrary queuing model assuming a Poisson arrival rate with unknown distribution of service times.
488. **B2QueuingSCAAveTimeinSystem**
Average time a customer spends in the system using an MG1 single channel arbitrary queuing model assuming a Poisson arrival rate with unknown distribution of service times.
489. **B2QueuingSCAAveTimeWaiting**
Average time a customer spends in the waiting line using an MG1 single channel arbitrary queuing model assuming a Poisson arrival rate with unknown distribution of service times.
490. **B2QueuingSCAProbHaveToWait**
Probability an arriving customer has to wait using an MG1 single channel arbitrary queuing model assuming a Poisson arrival rate with unknown distribution of service times.
491. **B2QueuingSCAProbNoCustomer**
Probability that no customers are in the system using an MG1 single channel arbitrary queuing model assuming a Poisson arrival rate with unknown distribution of service times.
492. **B2QueuingSCAAveCustomersinSystem**
Average number of customers in the system using a single channel queuing model.
493. **B2QueuingSCAAveCustomersWaiting**
Returns the average number of customers in the waiting line using a single channel queuing model.
494. **B2QueuingSCAAveTimeinSystem**
Average time a customer spends in the system using a single channel queuing model.
495. **B2QueuingSCAAveTimeWaiting**
Average time a customer spends in the waiting line using a single channel queuing model.
496. **B2QueuingSCProbHaveToWait**
Probability an arriving customer has to wait using a single channel queuing model.
497. **B2QueuingSCProbNoCustomer**
Returns the probability that no customers are in the system using a single channel queuing model.
498. **B2RatiosBasicEarningPower**
Computes the basic earning power (BEP) by accounting for earnings before interest and taxes (EBIT) and the amount of total assets employed.
499. **B2RatiosBetaLevered**

	Computes the levered beta from an unlevered beta level after accounting for the tax rate, total debt and equity values.
500.	B2RatiosBetaUnlevered Computes the unlevered beta from a levered beta level after accounting for the tax rate, total debt and equity values.
501.	B2RatiosBookValuePerShare Computes the book value per share (BV) by accounting for the total common equity amount and number of shares outstanding.
502.	B2RatiosCapitalCharge Computes the capital charge value (typically used to compute the economic profit of a project).
503.	B2RatiosCAPM Computes the capital asset pricing model's required rate of return in percent, given some benchmark market return, beta risk coefficient, and risk-free rate.
504.	B2RatiosCashFlowtoEquityLeveredFirm Cash flow to equity for a levered firm (accounting for operating expenses, taxes, depreciation, amortization, capital expenditures, change in working capital, preferred dividends, principal repaid and new debt issues).
505.	B2RatiosCashFlowtoEquityUnleveredFirm Cash flow to equity for an unlevered firm (accounting for operating expenses, taxes, depreciation, amortization, capital expenditures, change in working capital and taxes).
506.	B2RatiosCashFlowtoFirm Cash flow to the firm (accounting for earnings before interest and taxes EBIT, tax rate, depreciation, capital expenditures and change in working capital).
507.	B2RatiosCashFlowtoFirm2 Cash flow to the firm (accounting for net operating profit after taxes (NOPAT), depreciation, capital expenditures and change in working capital).
508.	B2RatiosContinuingValue1 Computes the continuing value based on a constant growth rate of free cash flows to perpetuity using a Gordon Growth Model.
509.	B2RatiosContinuingValue2 Computes the continuing value based on a constant growth rate of free cash flows to perpetuity using net operating profit after taxes (NOPAT), return on invested capital (ROIC), growth rate and current free cash flow.
510.	B2RatiosCostEquity Computes the cost of equity (as used in a CAPM model) using the dividend rate, growth rate of dividends, and current equity price.
511.	B2RatiosCurrentRatio Computes the current ratio by accounting for the individual asset and liabilities.
512.	B2RatiosDaysSalesOutstanding Computes the days sales outstanding by looking at the accounts receivables value, total annual sales, and number of days per year.
513.	B2RatiosDebtAssetRatio Computes the debt to asset ratio by accounting for the total debt and total asset values.
514.	B2RatiosDebtEquityRatio Computes the debt to equity ratio by accounting for the total debt and total common equity levels.
515.	B2RatiosDebtRatio1 Computes the debt ratio by accounting for the total debt and total asset values.
516.	B2RatiosDebtRatio2 Computes the debt ratio by accounting for the total equity and total asset values.
517.	B2RatiosDividendsPerShare Computes the dividends per share (DPS) by accounting for the dividend payment amount and number of shares outstanding.
518.	B2RatiosEarningsPerShare Computes the earnings per share (EPS) by accounting for the net income amount and number of shares outstanding.
519.	B2RatiosEconomicProfit1 Computes the economic profit using invested capital, return on invested capital (ROIC) and weighted average cost of capital (WACC).
520.	B2RatiosEconomicProfit2 Computes the economic profit using net operating profit after tax (NOPAT), return on invested capital (ROIC) and weighted average cost of capital (WACC).
521.	B2RatiosEconomicProfit3 Computes the economic profit using net operating profit after tax (NOPAT) and capital charge.
522.	B2RatiosEconomicValueAdded Computes the economic value added using earnings before interest and taxes (EBIT), total capital employed, tax rate, and weighted average cost of capital (WACC).
523.	B2RatiosEquityMultiplier Computes the equity multiplier (the ratio of total assets to total equity).
524.	B2RatiosFixedAssetTurnover Computes the fixed asset turnover by accounting for the annual sales levels and net fixed assets.
525.	B2RatiosInventoryTurnover Computes the inventory turnover using sales and inventory levels.
526.	B2RatiosMarketBookRatio1 Computes the market to book value per share by accounting for the share price and the book value (BV) per share.
527.	B2RatiosMarketBookRatio2 Computes the market to book value per share by accounting for the share price, total common equity value, and the number of shares outstanding.
528.	B2RatiosMarketValueAdded Computes the market value added by accounting for the stock price, total common equity, and number of shares outstanding.
529.	B2RatiosNominalCashFlow Computes the nominal cash flow amount assuming some inflation rate, real cash flow, and the number of years in the future.
530.	B2RatiosNominalDiscountRate Computes the nominal discount rate assuming some inflation rate and real discount rate.
531.	B2RatiosPERatio1 Computes the price to earnings ratio (PE) using stock price and earnings per share (EPS).
532.	B2RatiosPERatio2 Computes the price to earnings ratio (PE) using stock price, net income, and number of shares outstanding.
533.	B2RatiosPERatio3 Computes the price to earnings ratio (PE) using growth rates, rate of return, and discount rate.
534.	B2RatiosProfitMargin Computes the profit margin by taking the ratio of net income to annual sales.
535.	B2RatiosQuickRatio Computes the quick ratio by accounting for the individual asset and liabilities.
536.	B2RatiosRealCashFlow Computes the real cash flow amount assuming some inflation rate, nominal cash flow (Nominal CF), and the number of years in the future.
537.	B2RatiosRealDiscountRate Computes the real discount rate assuming some inflation rate and nominal discount rate.

538.	B2RatiosReturnonAsset1	Computes the return in asset using net income amount and total assets employed.	Returns the American call option with dividends and assuming the volatility changes over time, using a binomial lattice model. Use small number of steps or it will take a long time to compute!
539.	B2RatiosReturnonAsset2	Computes the return in asset using net profit margin percentage and total asset turnover ratio.	559. B2ROBinomialAmericanContractExpand Returns the American option to contract and expand using a binomial lattice model.
540.	B2RatiosReturnonEquity1	Computes return on equity using net income and total common equity values.	560. B2ROBinomialAmericanContraction Returns the American option to contract using a binomial lattice model.
541.	B2RatiosReturnonEquity2	Computes return on equity using return on asset (ROA), total asset, and total equity values.	561. B2ROBinomialAmericanCustomCall Returns the American option call option with changing inputs, vesting periods, and suboptimal exercise multiple using a binomial lattice model.
542.	B2RatiosReturnonEquity3	Computes return on equity using net income, total sales, total asset, and total common equity values.	562. B2ROBinomialAmericanExpansion Returns the American option to expand using a binomial lattice model.
543.	B2RatiosReturnonEquity4	Computes return on equity using net profit margin, total asset turnover, and equity multiplier values.	563. B2ROBinomialAmericanPut Returns the American put option with dividends using a binomial lattice model.
544.	B2RatiosROIC	Computes the return on invested capital (typically used for computing economic profit) accounting for change in working capital, property, plant equipment (PPE).	564. B2ROBinomialBermudanAbandonContract Returns the Bermudan option to abandon and contract using a binomial lattice model, where there is a vesting/blackout period where the option cannot be executed.
545.	B2RatiosShareholderEquity	Computes the common shareholder's equity after accounting for total assets, total liabilities and preferred stocks.	565. B2ROBinomialBermudanAbandonContractExpand Returns the Bermudan option to abandon, contract and expand, using a binomial lattice model, where there is a vesting/blackout period the option cannot be executed.
546.	B2SimulatedEuropeanCall	Returns the Monte Carlo simulated European call option (only European options can be approximated well with simulation). This function is volatile.	566. B2ROBinomialBermudanAbandonExpand Returns the Bermudan option to abandon and expand using a binomial lattice model, where there is a vesting/blackout period where the option cannot be executed.
547.	B2SimulatedEuropeanPut	Returns the Monte Carlo simulated European put option (only European options can be approximated well with simulation). This function is volatile.	567. B2ROBinomialBermudanAbandonment Returns the Bermudan option to abandon using a binomial lattice model, where there is a vesting/blackout period where the option cannot be executed.
548.	B2RatiosTimesInterestEarned	Computes the times interest earned ratio by accounting for earnings before interest and taxes (EBIT) and the amount of interest payment.	568. B2ROBinomialBermudanCall Returns the Bermudan call option with dividends, where there is a vesting/blackout period where the option cannot be executed.
549.	B2RatiosTotalAssetTurnover	Computes the total asset turnover by accounting for the annual sales levels and total assets.	569. B2ROBinomialBermudanContractExpand Returns the Bermudan option to contract and expand, using a binomial lattice model, where there is a vesting/blackout period where the option cannot be executed.
550.	B2RatiosWACC1	Computes the weighted average cost of capital (WACC) using market values of debt, preferred equity, and common equity, as well as their respective costs.	570. B2ROBinomialBermudanContraction Returns the Bermudan option to contract using a binomial lattice model, where there is a vesting/blackout period where the option cannot be executed.
551.	B2RatiosWACC2	Computes the weighted average cost of capital (WACC) using market values of debt, market values of common equity, as well as their respective costs.	571. B2ROBinomialBermudanExpansion Returns the Bermudan option to expand using a binomial lattice model, where there is a vesting/blackout period where the option cannot be executed.
552.	B2ROBinomialAmericanAbandonContract	Returns the American option to abandon and contract using a binomial lattice model.	572. B2ROBinomialBermudanPut Returns the Bermudan put option with dividends, where there is a vesting/blackout period where the option cannot be executed.
553.	B2ROBinomialAmericanAbandonContractExpand	Returns the American option to abandon, contract and expand using a binomial lattice model.	573. B2ROBinomialEuropeanAbandonContract Returns the European option to abandon and contract, using a binomial lattice model, where the option can only be executed at expiration.
554.	B2ROBinomialAmericanAbandonExpand	Returns the American option to abandon and expand using a binomial lattice model.	574. B2ROBinomialEuropeanAbandonContractExpand Returns the European option to abandon, contract and expand, using a binomial lattice model, where the option can only be executed at expiration.
555.	B2ROBinomialAmericanAbandonment	Returns the American option to abandon using a binomial lattice model.	575. B2ROBinomialEuropeanAbandonExpand Returns the European option to abandon and expand, using a binomial lattice model, where the option can only be executed at expiration.
556.	B2ROBinomialAmericanCall	Returns the American call option with dividends using a binomial lattice model.	
557.	B2ROBinomialAmericanChangingRiskFree	Returns the American call option with dividends and assuming the risk-free rate changes over time, using a binomial lattice model.	
558.	B2ROBinomialAmericanChangingVolatility		

576.	B2ROBinomialEuropeanAbandonment	Returns the European option to abandon using a binomial lattice model, where the option can only be executed at expiration.	593.	B2ROQuadrationalJumpDiffusionEuropeanPut	Returns the European put option whose underlying asset follows a Poisson jump-diffusion process, using a combinatorial quadrational lattice.
577.	B2ROBinomialEuropeanCall	Returns the European call option with dividends, where the option can only be executed at expiration.	594.	B2ROStateAmericanCall	Returns the American call option using a state jump function, where the up and down states can be asymmetrical, solved in a lattice model.
578.	B2ROBinomialEuropeanContractExpand	Returns the European option to contract and expand, using a binomial lattice model, where the option can only be executed at expiration.	595.	B2ROStateAmericanPut	Returns the American put option using a state jump function, where the up and down states can be asymmetrical, solved in a lattice model.
579.	B2ROBinomialEuropeanContraction	Returns the European option to contract using a binomial lattice model, where the option can only be executed at expiration.	596.	B2ROStateBermudanCall	Returns the Bermudan call option using a state jump function, where the up and down states can be asymmetrical, solved in a lattice model, and where the option cannot be exercised at certain vesting/blackout periods.
580.	B2ROBinomialEuropeanExpansion	Returns the European option to expand using a binomial lattice model, where the option can only be executed at expiration.	597.	B2ROStateBermudanPut	Returns the Bermudan put option using a state jump function, where the up and down states can be asymmetrical, solved in a lattice model, and where the option cannot be exercised at certain vesting/blackout periods.
581.	B2ROBinomialEuropeanPut	Returns the European put option with dividends, where the option can only be executed at expiration.	598.	B2ROStateEuropeanCall	Returns the Bermudan call option using a state jump function, where the up and down states can be asymmetrical, solved in a lattice model, and where the option can only be exercised at maturity.
582.	B2ROJumpDiffusionCall	Returns the closed-form model for a European call option whose underlying asset follows a Poisson jump-diffusion process.	599.	B2ROStateEuropeanPut	Returns the Bermudan put option using a state jump function, where the up and down states can be asymmetrical, solved in a lattice model, and where the option can only be exercised at maturity.
583.	B2ROJumpDiffusionPut	Returns the closed-form model for a European put option whose underlying asset follows a Poisson jump-diffusion process.	600.	B2ROTrinomialAmericanCall	Returns the American call option with dividend, solved using a trinomial lattice.
584.	B2ROMeanRevertingCall	Returns the closed-form model for a European call option whose underlying asset follows a mean-reversion process.	601.	B2ROTrinomialAmericanMeanRevertingCall	Returns the American call option with dividend, assuming the underlying asset is mean-reverting, and solved using a trinomial lattice.
585.	B2ROMeanRevertingPut	Returns the closed-form model for a European put option whose underlying asset follows a mean-reversion process.	602.	B2ROTrinomialAmericanMeanRevertingPut	Returns the American call option with dividend, assuming the underlying asset is mean-reverting, and solved using a trinomial lattice.
586.	B2ROPentanomialAmericanCall	Returns the Rainbow American call option with two underlying assets (these are typically price and quantity, and are multiplied together to form a new combinatorial pentanomial lattice).	603.	B2ROTrinomialAmericanPut	Returns the American put option with dividend, solved using a trinomial lattice.
587.	B2ROPentanomialAmericanPut	Returns the Rainbow American put option with two underlying assets (these are typically price and quantity, and are multiplied together to form a new combinatorial pentanomial lattice).	604.	B2ROTrinomialBermudanCall	Returns the Bermudan call option with dividend, solved using a trinomial lattice, where during certain vesting/blackout periods, the option cannot be exercised.
588.	B2ROPentanomialEuropeanCall	Returns the Rainbow European call option with two underlying assets (these are typically price and quantity, and are multiplied together to form a new combinatorial pentanomial lattice).	605.	B2ROTrinomialBermudanPut	Returns the Bermudan put option with dividend, solved using a trinomial lattice, where during certain vesting/blackout periods, the option cannot be exercised.
589.	B2ROPentanomialEuropeanPut	Returns the Rainbow European put option with two underlying assets (these are typically price and quantity, and are multiplied together to form a new combinatorial pentanomial lattice).	606.	B2ROTrinomialEuropeanCall	Returns the European call option with dividend, solved using a trinomial lattice, where the option can only be exercised at maturity.
590.	B2ROQuadrationalJumpDiffusionAmericanCall	Returns the American call option whose underlying asset follows a Poisson jump-diffusion process, using a combinatorial quadrational lattice.	607.	B2ROTrinomialEuropeanMeanRevertingCall	Returns the European call option with dividend, solved using a trinomial lattice, assuming the underlying asset is mean-reverting, and where the option can only be exercised at maturity.
591.	B2ROQuadrationalJumpDiffusionAmericanPut	Returns the American put option whose underlying asset follows a Poisson jump-diffusion process, using a combinatorial quadrational lattice.	608.	B2ROTrinomialEuropeanMeanRevertingPut	Returns the European put option with dividend, solved using a trinomial lattice, assuming the underlying asset is mean-
592.	B2ROQuadrationalJumpDiffusionEuropeanCall	Returns the European call option whose underlying asset follows a Poisson jump-diffusion process, using a combinatorial quadrational lattice.			

- reverting, and where the option can only be exercised at maturity.
609. **B2ROTrinomialEuropeanPut**
Returns the European put option with dividend, solved using a trinomial lattice, where the option can only be exercised at maturity.
610. **B2TrinomialImpliedArrowDebreuLattice**
Computes the complete set of implied Arrow-Debreu prices in an implied trinomial lattice using actual observed data. Copy and paste the function and use Ctrl+Shift+Enter to obtain the matrix.
611. **B2TrinomialImpliedArrowDebreuValue**
Computes the single value of implied Arrow-Debreu price (for a specific step/column and up-down event/row) in an implied trinomial lattice using actual observed data.
612. **B2TrinomialImpliedCallOptionValue**
Computes the European Call Option using an implied trinomial lattice approach, taking into account actual observed inputs.
613. **B2TrinomialImpliedDownProbabilityLattice**
Computes the complete set of implied DOWN probabilities in an implied trinomial lattice using actual observed data. Copy and paste the function and use Ctrl+Shift+Enter to obtain the matrix.
614. **B2TrinomialImpliedDownProbabilityValue**
Computes the single value of implied DOWN probability (for a specific step/column and up-down event/row) in an implied trinomial lattice using actual observed data.
615. **B2TrinomialImpliedLocalVolatilityLattice**
Computes the complete set of implied local probabilities in an implied trinomial lattice using actual observed data. Copy and paste the function and use Ctrl+Shift+Enter to obtain the matrix.
616. **B2TrinomialImpliedLocalVolatilityValue**
Computes the single value of localized volatility (for a specific step/column and up-down event/row) in an implied trinomial lattice using actual observed data.
617. **B2TrinomialImpliedUpProbabilityLattice**
Computes the complete set of implied UP probabilities in an implied trinomial lattice using actual observed data. Copy and paste the function and use Ctrl+Shift+Enter to obtain the matrix.
618. **B2TrinomialImpliedUpProbabilityValue**
Computes the single value of implied UP probability (for a specific step/column and up-down event/row) in an implied trinomial lattice using actual observed data.
619. **B2TrinomialImpliedPutOptionValue**
Computes the European Put Option using an implied trinomial lattice approach, taking into account actual observed inputs.
620. **B2SharpeRatio**
Computes the Sharpe Ratio (returns to risk ratio) based on a series of stock prices of an asset and a market benchmark series of prices.
621. **B2SCurveValue**
Computes the S-Curve extrapolation's next forecast value based on previous value, growth rate and maximum capacity levels.
622. **B2SCurveValueSaturation**
Computes the S-Curve extrapolation's saturation level based on previous value, growth rate and maximum capacity levels.
623. **B2SemiStandardDeviationPopulation**
Computes the semi-standard deviation of the population, that is, only the values below the mean are used to compute an adjusted population standard deviation, a more appropriate measure of downside risk.
624. **B2SemiStandardDeviationSample**
Computes the semi-standard deviation of the sample, that is, only the values below the mean are used to compute an adjusted sample standard deviation, a more appropriate measure of downside risk.
625. **B2SimulateBernoulli**
Returns simulated random numbers from the Bernoulli distribution. Type in RAND() as the random input parameter to generate volatile random values from this distribution.
626. **B2SimulateBeta**
Returns simulated random numbers from the Beta distribution. Type in RAND() as the random input parameter to generate volatile random values from this distribution.
627. **B2SimulateBinomial**
Returns simulated random numbers from the Binomial distribution. Type in RAND() as the random input parameter to generate volatile random values from this distribution.
628. **B2SimulateChiSquare**
Returns simulated random numbers from the Chi-Square distribution. Type in RAND() as the random input parameter to generate volatile random values from this distribution.
629. **B2SimulateDiscreteUniform**
Returns simulated random numbers from the Discrete Uniform distribution. Type in RAND() as the random input parameter to generate volatile random values from this distribution.
630. **B2SimulateExponential**
Returns simulated random numbers from the Exponential distribution. Type in RAND() as the random input parameter to generate volatile random values from this distribution.
631. **B2SimulateFDist**
Returns simulated random numbers from the F distribution. Type in RAND() as the random input parameter to generate volatile random values from this distribution.
632. **B2SimulateGamma**
Returns simulated random numbers from the Gamma distribution. Type in RAND() as the random input parameter to generate volatile random values from this distribution.
633. **B2SimulateGeometric**
Returns simulated random numbers from the Geometric distribution. Type in RAND() as the random input parameter to generate volatile random values from this distribution.
634. **B2SimulateGumbelMax**
Returns simulated random numbers from the Gumbel Max distribution. Type in RAND() as the random input parameter to generate volatile random values from this distribution.
635. **B2SimulateGumbelMin**
Returns simulated random numbers from the Gumbel Min distribution. Type in RAND() as the random input parameter to generate volatile random values from this distribution.
636. **B2SimulateLogistic**
Returns simulated random numbers from the Logistic distribution. Type in RAND() as the random input parameter to generate volatile random values from this distribution.
637. **B2SimulateLognormal**
Returns simulated random numbers from the Lognormal distribution. Type in RAND() as the random input parameter to generate volatile random values from this distribution.
638. **B2SimulateNormal**
Returns simulated random numbers from the Normal distribution. Type in RAND() as the random input parameter to generate volatile random values from this distribution.
639. **B2SimulatePareto**
Returns simulated random numbers from the Pareto distribution. Type in RAND() as the random input parameter to generate volatile random values from this distribution.
640. **B2SimulatePoisson**
Returns simulated random numbers from the Poisson distribution. Type in RAND() as the random input parameter to generate volatile random values from this distribution.

641. **B2SimulateRayleigh**
Returns simulated random numbers from the Rayleigh distribution. Type in RAND() as the random input parameter to generate volatile random values from this distribution.
642. **B2SimulateStandardNormal**
Returns simulated random numbers from the Standard Normal distribution. Type in RAND() as the random input parameter to generate volatile random values from this distribution.
643. **B2SimulateTDist**
Returns simulated random numbers from the Student's T distribution. Type in RAND() as the random input parameter to generate volatile random values from this distribution.
644. **B2SimulateTriangular**
Returns simulated random numbers from the Triangular distribution. Type in RAND() as the random input parameter to generate volatile random values from this distribution.
645. **B2SimulateUniform**
Returns simulated random numbers from the Uniform distribution. Type in RAND() as the random input parameter to generate volatile random values from this distribution.
646. **B2SimulateWeibull**
Returns simulated random numbers from the Weibull distribution. Type in RAND() as the random input parameter to generate volatile random values from this distribution.
647. **B2SixSigmaControlCChartCL**
Computes the center line in a control c-chart. C-charts are applicable when only the number of defects are important.
648. **B2SixSigmaControlCChartDown1Sigma**
Computes the lower 1 sigma limit in a control c-chart. C-charts are applicable when only the number of defects are important.
649. **B2SixSigmaControlCChartDown2Sigma**
Computes the lower 2 sigma limit in a control c-chart. C-charts are applicable when only the number of defects are important.
650. **B2SixSigmaControlCChartLCL**
Computes the lower control limit in a control c-chart. C-charts are applicable when only the number of defects are important.
651. **B2SixSigmaControlCChartUCL**
Computes the upper control limit in a control c-chart. C-charts are applicable when only the number of defects are important.
652. **B2SixSigmaControlCChartUp1Sigma**
Computes the upper 1 sigma limit in a control c-chart. C-charts are applicable when only the number of defects are important.
653. **B2SixSigmaControlCChartUp2Sigma**
Computes the upper 2 sigma limit in a control c-chart. C-charts are applicable when only the number of defects are important.
654. **B2SixSigmaControlNPChartCL**
Computes the center line in a control np-chart. NP-charts are applicable when proportions of defects are important, and where in each experimental subgroup, the number of sample size is constant.
655. **B2SixSigmaControlNPChartDown1Sigma**
Computes the lower 1 sigma limit in a control np-chart. NP-charts are applicable when proportions of defects are important, and where in each experimental subgroup, the number of sample size is constant.
656. **B2SixSigmaControlNPChartDown2Sigma**
Computes the lower 2 sigma limit in a control np-chart. NP-charts are applicable when proportions of defects are important, and where in each experimental subgroup, the number of sample size is constant.
657. **B2SixSigmaControlNPChartLCL**
658. **B2SixSigmaControlNPChartUCL**
Computes the upper control limit in a control np-chart. NP-charts are applicable when proportions of defects are important, and where in each experimental subgroup, the number of sample size is constant.
659. **B2SixSigmaControlNPChartUp1Sigma**
Computes the upper 1 sigma limit in a control np-chart. NP-charts are applicable when proportions of defects are important, and where in each experimental subgroup, the number of sample size is constant.
660. **B2SixSigmaControlNPChartUp2Sigma**
Computes the upper 2 sigma limit in a control np-chart. NP-charts are applicable when proportions of defects are important, and where in each experimental subgroup, the number of sample size is constant.
661. **B2SixSigmaControlPChartCL**
Computes the center line in a control p-chart. P-charts are applicable when proportions of defects are important, and where in each experimental subgroup, the number of sample size might be different.
662. **B2SixSigmaControlPChartDown1Sigma**
Computes the lower 1 sigma limit in a control p-chart. P-charts are applicable when proportions of defects are important, and where in each experimental subgroup, the number of sample size might be different.
663. **B2SixSigmaControlPChartDown2Sigma**
Computes the lower 2 sigma limit in a control p-chart. P-charts are applicable when proportions of defects are important, and where in each experimental subgroup, the number of sample size might be different.
664. **B2SixSigmaControlPChartLCL**
Computes the lower control limit in a control p-chart. P-charts are applicable when proportions of defects are important, and where in each experimental subgroup, the number of sample size might be different.
665. **B2SixSigmaControlPChartUCL**
Computes the upper control limit in a control p-chart. P-charts are applicable when proportions of defects are important, and where in each experimental subgroup, the number of sample size might be different.
666. **B2SixSigmaControlPChartUp1Sigma**
Computes the upper 1 sigma limit in a control p-chart. P-charts are applicable when proportions of defects are important, and where in each experimental subgroup, the number of sample size might be different.
667. **B2SixSigmaControlPChartUp2Sigma**
Computes the upper 2 sigma limit in a control p-chart. P-charts are applicable when proportions of defects are important, and where in each experimental subgroup, the number of sample size might be different.
668. **B2SixSigmaControlRChartCL**
Computes the center line in a control R-chart. X-charts are used when the number of defects are important, in each subgroup experiment multiple measurements are taken, and the range of the measurements is the variable plotted.
669. **B2SixSigmaControlRChartLCL**
Computes the lower control limit in a control R-chart. X-charts are used when the number of defects are important, in each subgroup experiment multiple measurements are taken, and the range of the measurements is the variable plotted.
670. **B2SixSigmaControlRChartUCL**
Computes the upper control limit in a control R-chart. X-charts are used when the number of defects are important,

- in each subgroup experiment multiple measurements are taken, and the range of the measurements is the variable plotted.
671. **B2SixSigmaControlUChartCL**
Computes the center line in a control u-chart. U-charts are applicable when number of defects are important, and where in each experimental subgroup, the number of sample sizes are the same.
672. **B2SixSigmaControlUChartDown1Sigma**
Computes the lower 1 sigma limit in a control u-chart. U-charts are applicable when number of defects are important, and where in each experimental subgroup, the number of sample sizes are the same.
673. **B2SixSigmaControlUChartDown2Sigma**
Computes the lower 2 sigma limit in a control u-chart. U-charts are applicable when number of defects are important, and where in each experimental subgroup, the number of sample sizes are the same.
674. **B2SixSigmaControlUChartLCL**
Computes the lower control limit in a control u-chart. U-charts are applicable when number of defects are important, and where in each experimental subgroup, the number of sample sizes are the same.
675. **B2SixSigmaControlUChartUCL**
Computes the upper control limit in a control u-chart. U-charts are applicable when number of defects are important, and where in each experimental subgroup, the number of sample sizes are the same.
676. **B2SixSigmaControlUChartUp1Sigma**
Computes the upper 1 sigma limit in a control u-chart. U-charts are applicable when number of defects are important, and where in each experimental subgroup, the number of sample sizes are the same.
677. **B2SixSigmaControlUChartUp2Sigma**
Computes the upper 2 sigma limit in a control u-chart. U-charts are applicable when number of defects are important, and where in each experimental subgroup, the number of sample sizes are the same.
678. **B2SixSigmaControlXChartCL**
Computes the center line in a control X-chart. X-charts are used when the number of defects are important, in each subgroup experiment multiple measurements are taken, and the average of the measurements is the variable plotted.
679. **B2SixSigmaControlXChartLCL**
Computes the lower control limit in a control X-chart. X-charts are used when the number of defects are important, in each subgroup experiment multiple measurements are taken, and the average of the measurements is the variable plotted.
680. **B2SixSigmaControlXChartUCL**
Computes the upper control limit in a control X-chart. X-charts are used when the number of defects are important, in each subgroup experiment multiple measurements are taken, and the average of the measurements is the variable plotted.
681. **B2SixSigmaControlXMRChartCL**
Computes the center line in a control XmR-chart. XmR-are used when the number of defects are important with only a single measurement for each sample and a time-series of moving ranges is the variable plotted.
682. **B2SixSigmaControlXMRChartLCL**
Computes the lower control limit in a control XmR-chart. XmR-are used when the number of defects are important with only a single measurement for each sample and a time-series of moving ranges is the variable plotted.
683. **B2SixSigmaControlXMRChartUCL**
Computes the upper control limit in a control XmR-chart. XmR-are used when the number of defects are important with only a single measurement for each sample and a time-series of moving ranges is the variable plotted.
684. **B2SixSigmaDeltaPrecision**
Computes the error precision given specific levels of Type I and Type II errors, as well as the sample size and variance.
685. **B2SixSigmaSampleSize**
Computes the required minimum sample size given Type I and Type II errors, as well as the required precision of the mean and the error tolerances.
686. **B2SixSigmaSampleSizeDPU**
Computes the required minimum sample size given Type I and Type II errors, as well as the required precision of the defects per unit and the error tolerances.
687. **B2SixSigmaSampleSizeProportion**
Computes the required minimum sample size given Type I and Type II errors, as well as the required precision of the proportion of defects and the error tolerances.
688. **B2SixSigmaSampleSizeStdDev**
Computes the required minimum sample size given Type I and Type II errors, as well as the required precision of the standard deviation and the error tolerances.
689. **B2SixSigmaSampleSizeZeroCorrelTest**
Computes the required minimum sample size to test if a correlation is statistically significant at an alpha of 0.05 and beta of 0.10.
690. **B2SixSigmaStatCP**
Computes the potential process capability index Cp given the actual mean and sigma of the process, including the upper and lower specification limits.
691. **B2SixSigmaStatCPK**
Computes the process capability index Cpk given the actual mean and sigma of the process, including the upper and lower specification limits.
692. **B2SixSigmaStatDPMO**
Computes the defects per million opportunities (DPMO) given the actual mean and sigma of the process, including the upper and lower specification limits.
693. **B2SixSigmaStatDPU**
Computes the proportion of defective units (DPU) given the actual mean and sigma of the process, including the upper and lower specification limits.
694. **B2SixSigmaStatProcessSigma**
Computes the process sigma level given the actual mean and sigma of the process, including the upper and lower specification limits.
695. **B2SixSigmaStatYield**
Computes the nondefective parts or the yield of the process given the actual mean and sigma of the process, including the upper and lower specification limits.
696. **B2SixSigmaUnitCPK**
Computes the process capability index Cpk given the actual counts of defective parts and the total opportunities in the population.
697. **B2SixSigmaUnitDPMO**
Computes the defects per million opportunities (DPMO) given the actual counts of defective parts and the total opportunities in the population.
698. **B2SixSigmaUnitDPU**
Computes the proportion of defective units (DPU) given the actual counts of defective parts and the total opportunities in the population.
699. **B2SixSigmaUnitProcessSigma**
Computes the process sigma level given the actual counts of defective parts and the total opportunities in the population.
700. **B2SixSigmaUnitYield**
Computes the nondefective parts or the yield of the process given the actual counts of defective parts and the total opportunities in the population.

701. **B2StandardNormalBivariateCDF**
Given the two Z-scores and correlation, returns the value of the bivariate standard normal (means of zero, variances of 1) cumulative distribution function.
702. **B2StandardNormalCDF**
Given the Z-score, returns the value of the standard normal (mean of zero, variance of 1) cumulative distribution function.
703. **B2StandardNormalInverseCDF**
Computes the inverse cumulative distribution function of a standard normal distribution (mean of 0 and variance of 1)
704. **B2StandardNormalPDF**
Given the Z-score, returns the value of the standard normal (mean of zero, variance of 1) probability density function.
705. **B2StockIndexCallOption**
Similar to a regular call option but the underlying asset is a reference stock index such as the Standard and Poors 500. The analysis can be solved using a Generalized Black-Scholes-Merton Model as well.
706. **B2StockIndexPutOption**
Similar to a regular put option but the underlying asset is a reference stock index such as the Standard and Poors 500. The analysis can be solved using a Generalized Black-Scholes-Merton Model as well.
707. **B2SuperShareOptions**
The option has value only if the stock or asset price is between the upper and lower barriers, and at expiration, provides a payoff equivalent to the stock or asset price divided by the lower strike price (S/X_{Lower}).
708. **B2SwaptionEuropeanPayer**
European Call Interest Swaption.
709. **B2SwaptionEuropeanReceiver**
European Put Interest Swaption.
710. **B2TakeoverFXOption**
At a successful takeover (foreign firm value in foreign currency is less than the foreign currency units), option holder can purchase the foreign units at a predetermined strike price (in exchange rates of the domestic to foreign currency).
711. **B2TimeSwitchOptionCall**
Holder gets $AccumAmount \times TimeSteps$ each time asset > strike for a call. TimeSteps is frequency asset price is checked if strike is breached (e.g., for 252 trading days, set DT as 1/252).
712. **B2TimeSwitchOptionPut**
Holder gets $AccumAmount \times TimeSteps$ each time asset < strike for a put. TimeSteps is frequency asset price is checked if strike is breached (e.g., for 252 trading days, set DT as 1/252).
713. **B2TradingDayAdjustedCall**
Call option corrected for varying volatilities (higher on trading days than on non-trading days). Trading Days Ratio is the number of trading days left until maturity divided by total trading days per year (between 250 and 252).
714. **B2TradingDayAdjustedPut**
Put option corrected for varying volatilities (higher on trading days than on non-trading days). Trading Days Ratio is the number of trading days left until maturity divided by total trading days per year (between 250 and 252).
715. **B2TwoAssetBarrierDownandInCall**
Valuable or knocked in-the-money only if the lower barrier is breached (reference Asset 2 goes below the barrier), and the payout is in the option on Asset 1 less the strike price.
716. **B2TwoAssetBarrierDownandInPut**
Valuable or knocked in-the-money only if the lower barrier is breached (reference Asset 2 goes below the barrier), and the payout is in the option on the strike price less the Asset 1 value.
717. **B2TwoAssetBarrierDownandOutCall**
Valuable or stays in-the-money only if the lower barrier is not breached (reference Asset 2 does not go below the barrier), and the payout is in the option on Asset 1 less the strike price.
718. **B2TwoAssetBarrierDownandOutPut**
Valuable or stays in-the-money only if the lower barrier is not breached (reference Asset 2 does not go below the barrier), and the payout is in the option on the strike price less the Asset 1 value.
719. **B2TwoAssetBarrierUpandInCall**
Valuable or knocked in-the-money only if the upper barrier is breached (reference Asset 2 goes above the barrier), and the payout is in the option on Asset 1 less the strike price.
720. **B2TwoAssetBarrierUpandInPut**
Valuable or knocked in-the-money only if the upper barrier is breached (reference Asset 2 goes above the barrier), and the payout is in the option on the strike price less the Asset 1 value.
721. **B2TwoAssetBarrierUpandOutCall**
Valuable or stays in-the-money only if the upper barrier is not breached (reference Asset 2 does not go above the barrier), and the payout is in the option on Asset 1 less the strike price.
722. **B2TwoAssetBarrierUpandOutPut**
Valuable or stays in-the-money only if the upper barrier is not breached (reference Asset 2 does not go above the barrier), and the payout is in the option on the strike price less the Asset 1 value.
723. **B2TwoAssetCashOrNothingCall**
Pays cash at expiration as long as both assets are in the money. For call options, both asset values must be above their respective strike prices.
724. **B2TwoAssetCashOrNothingDownUp**
Cash will only be paid if at expiration, the first asset is below the first strike, and the second asset is above the second strike.
725. **B2TwoAssetCashOrNothingPut**
Pays cash at expiration as long as both assets are in the money. For put options, both assets must be below their respective strike prices).
726. **B2TwoAssetCashOrNothingUpDown**
Cash will only be paid if the first asset is above the first strike price, and the second asset is below the second strike price at maturity.
727. **B2TwoAssetCorrelationCall**
Asset 1 is the benchmark asset, whereby if at expiration Asset 1's values exceed Strike 1's value, then the option is knocked in the money, and the payoff on the option is Asset 2 - Strike 2, otherwise the option becomes worthless.
728. **B2TwoAssetCorrelationPut**
Asset 1 is the benchmark asset, whereby if at expiration Asset 1's value is below Strike 1's value, then the put option is knocked in the money, and the payoff on the option is Strike 2 - Asset 2, otherwise the option becomes worthless.
729. **B2VaRCorrelationMethod**
Computes the Value at Risk using the Variance-Covariance and Correlation method, accounting for a specific VaR percentile and holding period.
730. **B2VarOptions**
Computes the Value at Risk of a portfolio of correlated options.
731. **B2Volatility**
Returns the Annualized Volatility of time-series cash flows. Enter in the number of periods in a cycle to annualize the volatility (1=annual, 4=quarter, 12=monthly data).
732. **B2VolatilityImpliedforDefaultRisk**
Only used when computing the implied volatility required for

	optimizing an option model to compute the probability of default.	763. Statistical Tool: Single Factor Multiple Treatments
733. B2WarrantsDilutedValue	Returns the value of a warrant (like an option) that is convertible to stock while accounting for dilution effects based on the number of shares and warrants outstanding.	764. Statistical Tool: Testing Means (T)
734. B2WriterExtendibleCallOption	The call option is extended beyond the initial maturity to an extended date with a new extended strike if at maturity the option is out of the money, providing a safety net of time for the option holder.	765. Statistical Tool: Testing Means (Z)
735. B2WriterExtendiblePutOption	The put option is extended beyond the initial maturity to an extended date with a new extended strike if at maturity the option is out of the money, providing a safety net of time for the option holder.	766. Statistical Tool: Testing Proportions (Z)
736. B2YieldCurveBIM	Returns the Yield Curve at various points in time using the Bliss model.	767. Statistical Tool: Two-Way ANOVA
737. B2YieldCurveNS	Returns the Yield Curve at various points in time using the Nelson-Siegel approach.	768. Statistical Tool: variance-Covariance Matrix
738. B2ZEOB	Returns the Economic Order Batch or the optimal quantity to be manufactured on each production batch.	769. Statistical Tool: Wilcoxon Signed-Rank Test (One Variable)
739. B2ZEOBBatch	Returns the Economic Order Batch analysis' optimal number of batches to be manufactured per year.	770. Statistical Tool: Wilcoxon Signed-Rank Test (Two Variables)
740. B2ZEOB HoldingCost	Returns the Economic Order Batch analysis' cost of holding excess units per year if manufactured at the optimal level.	771. Valuation Tool: Lattice Maker for Debt
741. B2ZEOB ProductionCost	Returns the Economic Order Batch analysis' total cost of setting up production per year if manufactured at the optimal level.	772. Valuation Tool: Lattice Maker for Yield
742. B2ZEOB TotalCost	Returns the Economic Order Batch analysis' total cost of production and holding costs per year if manufactured at the optimal level.	 The following lists Risk Simulator tools/applications that are used in the Modeling Toolkit:
743. B2ZEOQ	Economic Order Quantity's order size on each order.	773. Monte Carlo Simulation using 25 statistical distributions
744. B2ZEOQExcess	Economic Order Quantity's excess safety stock level	774. Monte Carlo Simulation: Simulations with Correlations
745. B2ZEOQOrders	Economic Order Quantity's number of orders per year	775. Monte Carlo Simulation: Simulations with Precision Control
746. B2ZEOQProbability	Economic Order Quantity's probability of out of stock	776. Monte Carlo Simulation: Simulations with Truncation
747. B2ZEOQR reorderPoint	Economic Order Quantity's reorder point	777. Stochastic Forecasting: Box-Jenkins ARIMA
 The following lists the statistical and analytical tools in the Modeling Toolkit:		778. Stochastic Forecasting: Maximum Likelihood
748. Statistical Tool: Chi-Square Goodness of Fit Test		779. Stochastic Forecasting: Nonlinear Extrapolation
749. Statistical Tool: Chi-Square Independence Test		780. Stochastic Forecasting: Regression Analysis
750. Statistical Tool: Chi-Square Population Variance Test		781. Stochastic Forecasting: Stochastic Processes
751. Statistical Tool: Dependent Means (T)		782. Stochastic Forecasting: Time-Series Analysis
752. Statistical Tool: Friedman's Test		783. Portfolio Optimization: Discrete Binary Decision Variables
753. Statistical Tool: Independent and Equal Variances (T)		784. Portfolio Optimization: Discrete Decision Variables
754. Statistical Tool: Independent and Unequal Variances (T)		785. Portfolio Optimization: Discrete Continuous Decision Variables
755. Statistical Tool: Independent Means (Z)		786. Portfolio Optimization: Static Optimization
756. Statistical Tool: Independent Proportions (Z)		787. Portfolio Optimization: Dynamic Optimization
757. Statistical Tool: Independent Variances (F)		788. Portfolio Optimization: Stochastic Optimization
758. Statistical Tool: Kruskal-Wallis Test		789. Simulation Tools: Bootstrap Simulation
759. Statistical Tool: Lilliefors Test		790. Simulation Tools: Custom Historical Simulation
760. Statistical Tool: Principal Component Analysis		791. Simulation Tools: Data Diagnostics
761. Statistical Tool: Randomized Block Multiple Treatments		792. Simulation Tools: Distributional Analysis
762. Statistical Tool: Runs Test		793. Simulation Tools: Multiple Correlated Data Fitting
		794. Simulation Tools: Scenario Analysis
		795. Simulation Tools: Sensitivity Analysis
		796. Simulation Tools: Single Data Fitting
		797. Simulation Tools: Statistical Analysis
		798. Simulation Tools: Tornado Analysis
		 The following lists Real Options SLS tools/applications used in the Modeling Toolkit:
		799. Audit Sheet Functions
		800. Changing Volatility and Risk-free Rates Model
		801. Lattice Maker
		802. SLS Single Asset and Single Phase: American Options
		803. SLS Single Asset and Single Phase: Bermudan Options
		804. SLS Single Asset and Single Phase: Customized Options
		805. SLS Single Asset and Single Phase: European Options
		806. SLS Multiple Asset and Multiple Phases
		807. SLS Multinomial Lattices: Trinomials
		808. SLS Multinomial Lattices: Trinomial Mean-Reversion
		809. SLS Multinomial Lattices: Quadratics
		810. SLS Multinomial Lattices: Pentanomials
